**McCORMICK-DEERING is a High-Lift Mower**  
Extremely high lift is a feature of McCormick-Deering regular lift mowers. The driver can raise the cutter bar amply high with the foot lever to pass over most obstacles, or if a higher obstruction is encountered, the hand lever pulled back to the first notch usually raises the bar high enough. Extremely high lift can be secured with the hand lever in the second notch. This is more than is needed for any cutting except in stumpy fields. For cutting among trees, rocks, and around buildings, the vertical lift mower should be ordered.  
With the 5-ft. mower, by placing the hand lever in the second notch, the cutter bar can be raised so that the outer shoe is 44% in. above the ground and the inner shoe 13 in. above the ground. There is no detent to grip on the raising and lowering lever. Just pull the lever backward or push it forward. The latch falls into place in the segment automatically.  
There have been more improvements made in McCormick-Deering mowers in the last ten years than in the thirty years preceding. Do you know what all these improvements are? Many of them mean a big saving in hay. Come in and let us explain these new features to you and get a copy of our new booklet, "More Than Just a Mower."
