

Scholls

Most of the berry growers around Scholls have started picking black-caps.

Mrs. Haynes and two sons, Ben and Bayne, motored to eastern Oregon in the vicinity of Heppner last week. They went through the Arlington district just after the flood and saw the ruins. Mrs. Haynes says "Scholls is good enough for me."

Charles Fristoe of Prosser, Wash., is visiting at the home of Mrs. Elizabeth Reed.

Miss Irene Cromwell with her uncle and family of Portland have gone to Crater Lake and other places of interest. They expect to be away about two weeks.

Recent visitors at the home of Mrs. Elizabeth Reed were Mr. and Mrs. N. E. Wilson and son, Robert, of Vancouver, Wash.

Mrs. Gaffney, the Scholls telephone operator, and her husband and daughter, are spending their vacation in Seattle.

Dr. F. D. Stricker, secretary of the state board of health, spent Sunday at the McCann home.

Mrs. Farver is seriously ill.

Mrs. Ida Kays is attending the teachers' convention in Seattle, Wash.

When pullets grow combs before they are five months old the amount of mash is reduced or the contents changed, but care is taken that pullets are not stunted in their growth.

MRS. D. B. REASONER

Mrs. Julia Reasoner, wife of D. B. Reasoner of Vernonia, died suddenly Monday evening, July 4, at the home of her daughter, Mrs. Fred L. Beach, near North Plains.

Julia Janeway was born March 31, 1862, at Kellogg, Iowa, the daughter of Mr. and Mrs. Benjamin Janeway. She was married to D. B. Reasoner on March 6, 1881, at Reasnor, Iowa. They came to Oregon in April, 1883, settling first in the Middleton community. Later they moved to Hillsboro, where they made their home until about four years ago, when they moved to Vernonia.

Mr. and Mrs. Reasoner came down from Vernonia Saturday to spend the Fourth with their daughters, and had spent the day Monday at the celebration grounds, meeting old friends. In the early evening they returned to the home of Mr. and Mrs. Beach, and apparently Mrs. Reasoner was in good health, but expired at 7:30, soon after their arrival.

Funeral services were held this afternoon at the Limber residential parlors and interment was in the Tualatin Plains cemetery.

Mrs. Reasoner was a woman of splendid character and had many friends here and in Vernonia.

ago, when they moved to Vernonia. Mr. Reasoner is now city recorder of Vernonia.

She is survived by her husband, one son, Ray Reasoner of Grants Pass, and two daughters, Mrs. Jennie Beach and Mrs. Ina Bowman of Hillsboro. She is also survived by one brother in southern California, and two sisters, one in Walla Walla, Wash., and one in Winterset, Iowa.

Mr. and Mrs. Reasoner came down from Vernonia Saturday to spend the Fourth with their daughters, and had spent the day Monday at the celebration grounds, meeting old friends. PROGRAM IS SUCCESS

The juvenile program of the junior class in piano of Miss Helen Wilcox was a great success. A large and enthusiastic company greeted the players. Mrs. Kate Dell Marden, prominent Portland musician and exponent of the Dunning system, assisted by little Cavell Abbott, seven years old, who has had 19 months of the work, gave the Dunning demonstration. This little wonder musician will never be forgotten. She played numbers from the great Bach, Beethoven, Mozart, Chopin, and the modern composers Greig and Moskowski. A delegation of musicians, critics and teachers from Salem and Portland attended.

Miss Wilcox is an authorized Dunning teacher, and will start her classes at the beginning of the school year in September.

But we also have at our command a substance called toxin-antitoxin, which will protect susceptible children against diphtheria. The newer way is to prevent diphtheria by immunizing the children against the disease while they are well, thereby saving untold suffering.

Parents who wish to have their children protected against diphtheria should go to their family doctor or to the county health officer to have it done. Since the newer ways of controlling diphtheria have been used in Oregon we have had a material reduction in the number of cases and more than 40 per cent reduction in the number of deaths. Diphtheria can be stamped out in Oregon completely if parents will have their children protected and co-operate with the health department in the fight.

for the comfort and well-being of mankind?

The average individual in the United States loses about seven days each year from sickness involving inability to work. Can your town reduce the loss in wages and the decrease in production resulting from this sickness, a loss which reaches the tremendous amount of one and one quarter billion dollars per year for the United States?

An adequate and pure water supply must be one of your inducements. Such a supply will insure against the ravages of typhoid fever and other intestinal disorders. Your town must have proper sewage disposal; it must provide a sewage system large enough not only for its immediate needs, but also large enough to take care of the increase in domestic and industrial wastes which the location of the industrial plant will occasion. Your town should provide garbage collection and disposal.

The food supply should be rigidly inspected. The milk and other dairy products should come from tuberculin-tested cows, and should be fresh and clean. Your town should have a health department to supervise the sanitary production of foods, as well as other health activities. There should be sanitary ordinances which, when properly enforced, will give protection to the

health and comfort of the community.

The children must be given protection against the contagious diseases. The town should have available the services of a trained school nurse and of a school physician. The school building should be modern in design and construction. There should be playgrounds for the adult as well as for the child.

The town should offer proper and adequate hospital facilities. It should have good medical men, and should deal harshly with the quack and the health exploiter. It should offer resources for recreation, both mental and physical, and should have these resources under intelligent supervision.

What town in Oregon can offer all these inducements?

NO DIPHTHERIA IN OREGON BY 1930

The Oregon State Board of Health at its annual meeting in Salem in January adopted this slogan and placed itself on record favoring an intensive campaign for the eradication of diphtheria. The highest authorities on public health administration are agreed that diphtheria can be practically made to disappear by a simple and harmless procedure. Science has developed an agent which will protect susceptible persons, especially the young, against diphtheria.

Diphtheria is an important cause of death in the State of Oregon, especially in its attack on children. In 1926 there were 931 cases with 60 deaths from diphtheria, while in 1925 there were 1370 cases and 101 deaths.

In the effort to eradicate diphtheria by the end of 1930 it will be necessary to immunize or protect every susceptible child in the state.

Diphtheria is a scourge which has a most insidious onset and one of the most fatal in consequence.

Among the leading causes for the prevalence of diphtheria in this state are the following:

1. The presence in the state of a large number of susceptible individuals, especially young children.
2. The presence in schools of "carriers" of the diphtheria germ.
3. Neglect by parents or guardians to obtain expert attention for children in the early stage of this disease.
4. Failure to report some cases of diphtheria with a resultant disregard of proper quarantine regulations.
5. Failure to diagnose and to treat the disease with sufficient doses of the specific remedy.

The old way was to wait until the child had diphtheria and then make a desperate effort to save its life. Diphtheria antitoxin as a curative measure has reduced the number of deaths from this disease about one-half. Diphtheria antitoxin was used and still is used to cure this disease.

"A Good Place to Trade"

Reapers and Gleaners

When a business boasts that it is successful without advertising, it is proper to ask "Is zat so?" The facts sometimes reveal that its success is really due to advertising—competitors' advertising. Other houses have created a market so active that it absorbs some of the unadvertised brands.

Even a well-reaped field leaves something for the gleaner. But the gleaner never gets as much as the reaper. And he depends for his business on something outside himself. He is there on sufferance. The advertised brand pays fare, and occupies a cabin. The unadvertised brand is a stowaway. Sometimes it reaches the port, rumpled and undignified, and not altogether honestly, and sometimes it is discovered and thrown out.

A good article will always have some sale. A good article's sale will always be helped by a competitor's advertising. But a good article with adequate advertising can always secure a larger share of sales than the same article with no other advertising than that of competitors.
