Normal human blood is too thick to be drawn through the mosquito's small piercing tube. They must first inject a thinning fluid. In that way disease germs are set afloat in the blood stream—bacteria of burning fever and crippling disease. There is also the danger of streptococci infection (blood poisoning) from scratching the bite. Mosquitoes must be killed. Health authorities advocate Fly-Tox. Simple instructions on each bottle (blue label) for killing ALL household insects. Insist on Fly-Tox. Fly-Tox is easy to use. Safe, stainless, fragrant, sure.
