World's Easiest Driving Control

NO OTHER CAR in all the world controls quite so easily—with such complete lack of effort—as the new Nash '400'.

Nash engineers have developed a new steering mechanism to achieve this result. An ingenious arrangement of roller bearings and a roller-tooth traveling in a worm gear, reduces friction to a minimum hitherto thought impossible.

Women drivers find new help and gain new confidence in parking. Little effort is needed to bring the "400" up to, or away from, the curb.

Gear shifting is just as easy. The "400" clutch pedal depresses at a touch, scarcely resisting the weight of your foot. The conveniently placed shifting lever moves smoothly, easily, from one speed to another.

If you ever find that driving a car tires you, try driving a Nash "400". It will give you an entirely new conception of how effortless, how pleasurable, motoring can be!
