

County Nurse Explains Test

Value Tuberculosis Tests Seen by Miss Dixon

(By Margaret Dixon, county nurse) Every parent or guardian in Hillsboro is urged to see that their boy or girl is among those to be given the skin test for tuberculosis March 27. This test cannot be given unless a written request is sent to the school. For your convenience blanks will be sent to your home. Please investigate the test and do not neglect to return the slip with your signature.

This is a service intended for every child and an opportunity which it may not be possible to again offer to such a large group. It is not merely a charity for the under-privileged child. Parents are invited to be present at the school and free literature on the subject is available at the schools and at the county nurse's office.

Perhaps your child has just recently been exposed and immediate breaking of the contact will mean that the infection will remain without any effects of the disease and will never endanger anyone else. Any licensed physician in Washington county will be glad and willing to give information to parents on those most vitally concerned in regard to the child, about the tuberculin test or any other preventive measure.

Some of the questions which have been asked may be answered as follows: 1. Has the test ever been used in Washington county? Answer: Yes, Sherwood, Beaverton, Glenwood, St. Mary's home, with a total of 700 children.

2. Is there any scar or disfigurement? Answer: No.

3. Are there any germs of tuberculosis in the liquid used? Answer: Absolutely no. The solution is a substance called tuberculin which has been sterilized, and government inspected. It is the same kind that specialists use in their offices and hospitals, also at the state hospital.

4. Are the conditions sanitary when given in a large school? Answer: Yes, a medical doctor gives the test and the nurse assists. All supplies are properly boiled and sterilized.

5. How soon do you know which tests are positive? Answer: Two days.

6. Does the positive test mean that the child has tuberculosis? Answer: No. Too much emphasis cannot be placed upon this. A thorough examination and X-ray are necessary to discover active infection there. This test is simply a first step in determining whether there is cause for suspicion. After that the X-ray and other examinations are carried out.

7. Of what use is the test? Answer: It is the best and quickest means of finding early cases when they can be cared for readily at a minimum cost. It is a means of finding out active cases, not only actually in the school but in adults in the home. A positive reading or a yes reading may be checked at the state hospital.

8. Where does any one get T. B.? Answer: From any one who has had the disease and does not know about it. Tuberculosis is so careless about the discharge of the nose and throat. It may be gotten from milk from infected cows, from foods, or in fact, any unsanitary or unhealthy condition, but always from T. B. germs.

9. Are all who have a positive reaction dangerous to be with at school or play? Answer: No. The greatest danger is to themselves. Less than one in 100 can infect others but all should be carefully examined to be sure that they are not the one.

Fall of the river from Gaston to Hillsboro is only about 2.5 feet per mile and only 0.2 feet per mile from Hillsboro to the mouth of the stream, the report pointed out.

In addition the river is choked with logs, snags, mud islands, overhanging trees and brush.

Control or reduction of floods would primarily benefit agriculture on lands now flooded and permit their full utilization. Farmers on the high lands would be aided by more perfect drainage and residents of cities and towns would secure

WE KNOW CHEVROLETS—YOU KNOW US!

INFORMATION WANTED We wonder why a woman as a rule cannot gracefully throw a stone at a hen or sharpen a pencil? A traveling man told us last week that he was afraid of his wife—that she had threatened to kill him with an axe. "Huh! Why worry?" we asked him. "Did you ever see a woman try to chop a stick of wood?" That isn't evidence that a woman can't get the same advantages in our repair service as her husband can. Our skill in repairing Chevrolets means better workmanship, lasting results and consequently greater economy. A good overhauling, occasionally, preserves the investment your car represents. Don't trust the work to any but skilled specialists.

Organizations Aid in Health Tests

(By Margaret Dixon, county nurse)

Call for help against tuberculosis among our school children has been responded to by the American Legion and Auxiliary and the Washington County Public Health Association.

Even the robust boy or girl may be under suspicion. A skin test which tells whether or not T. B. germs are in the body, has been proven to be absolutely harmless and has been given to more than 1500 Oregon children. For you it will answer the question, "Is my child one of those who has within his or her body the germs of T. B.?"

Physicians of the city have offered their service and the school board has expressed its approval in order that this test may be offered to every child. The above organizations have given their support in order that this may be done without charge.

Whether this effort and expense has been justified will depend on the number included. Rich and poor children and children of just plain folk, because the tuberculosis germ does not respect the contents of anyone's pocketbook.

Provision is made so that children of St. Matthew's school and the Seventh Day Adventist school may also be tested.

Not only is the test being offered to all, but the necessary X-ray examination will be provided on an individual basis wherever this proves necessary and money from the Christmas seal sale will be called upon to help provide such necessary care.

The slip which you sign permitting your child to be included may also be the means of encouraging the parent of some other child to do likewise. Early discovery means early recovery for the child infected and prevention for those with whom he associates.
