### Surplus-Powered Rollator!

"How Big is the Motor?" Ask that about the refrigerator you buy. If the motor is big, that means that the compressor is powerful enough to protect your food with surplus cold and freeze ice quickly when you need it most.

Even the smallest Norge has a big, powerful motor — not a motor that spoils the food to spare the meter, but a motor that saves money on both. It has to run but a small part of the time to make more cold than you'll ever need. By running less time it uses less current—costs less to operate. You're always sure of dependable cold—plenty of ice.

Be sure your refrigerator is surplus-powered. And be sure it has all these convenience features—

- Improved Press Action Lazy-latch
- Improved Automatic Flood Light
- Combination Bottle and Dairy Rack
- Sliding Utility Basket
- Hydrovoir
- Closely Spaced Shelf Bars to prevent small containers from tipping
- Adjustable Shelf
- Many other features, improvements and refinements.

THE ROLLATOR COMPRESSOR... exclusive Norge cold-making mechanism, has but three slowly moving parts, employs smooth, easy, rolling power instead of the usual hurried back-and-forth action. Result—more cold for the current used and a mechanism that is almost everlasting.
