The 20,000,000th Ford

—shown above—arrived in Hillsboro in 1931 and was greeted by an enthusiastic crowd—

And Now

THE 25-MILLIONTH FORD

HAS JUST BEEN BUILT

IT HAS never occurred before in automobile history that 25 million cars of one make, bearing one name, have been manufactured under one management. The 25,000,000th Ford car rolled off the Ford Rouge Plant production line on January 18, 1937.

25 million cars since 1903 . . . more than one-third of all the cars ever built . . . enough cars to transport the entire population of the United States.

The figures represent a remarkable contribution to the social welfare, the industrial stability and the general progress of our country.

People respect Ford efficiency. They know Ford uses fine materials, the best workmanship at good wages, the most exact precision measurements. They know these things are passed along to purchasers in the form of extra value. Naturally, they like to do business with such a company. That is the only reason it has been required to produce 25 million cars.

Naturally, too, they expect more of a Ford car, more this year than last year—more

each year than the year before. They have every right to. The experience gained in building 25,000,000 cars enables Ford to produce today a really superb motor car at a really low price—with the Beauty, Comfort, Safety and Performance of much more expensive cars.

The 1937 Ford V-8 combines advanced design, all-steel construction, extra body room, and brilliant brakes with a choice of two V-type 8-cylinder engines—the most modern type of power-plant on land, sea, or in the air.

The 85-horsepower engine provides top performance with unusually good economy for its high power.

The 60-horsepower engine gives good performance with the greatest gasoline mileage ever built into a Ford car—and wears the lowest Ford price tag in years.

People expect more of a Ford car because it's a Ford—and they get more for the same reason. It is undeniably the quality car in the low-price field.

STOP and GO all year round

ROUND TOWN 4 OUT OF EVERY 5 MILES YOU DRIVE ARE STOP AND GO

SUPER-SHELL

JUST "starting up" after a normal traffic stop can waste enough gasoline to drive your car a third of a mile.

To reduce the waste of stop and go, Shell engineers developed a way to "balance" gasoline.

This balancing process completely rearranges the chemical structure of gasoline . . . makes Super-Shell

"digestible" for your motor . . . just as cooking will make some foods digestible for you.

"Motor-digestible" is the best way to describe this gasoline.

Under all stop-and-go driving conditions, you'll find your motor gets the full benefit of Super-Shell's high energy content.

And you get the savings! Super-Shell is on sale from coast to coast. There's a Shell station in your neighborhood.
