Health Unit to Give Treatment

"Smallpox and diphtheria are two common diseases that are absolutely preventable," Dr. C. D. McDonald, county health officer, declared this week.

"Only a few years ago typhoid fever and smallpox were among the major causes of death today they are a rarity. Diphtheria now causes about half of the deaths it did 10 years ago and our health departments stand between us and conditions that we hope will never return," he pointed out.

"A program of immunization against diphtheria and smallpox is now under way in your local health unit. A toxoid and smallpox vaccination clinic will be held every Saturday from 9:30 to 11:30 a. m. in the health office at the court house. A 25c charge will be made for the smallpox vaccine and the toxoid to help defray expenses of the clinic. Any pre-school or school children coming in to the clinic but must be accompanied by his parents or bring a slip giving permission for the immunization tests.

"Vaccination is your protection against smallpox and smallpox will be eradicated when every body is successfully vaccinated. A single successful vaccination will give a certain amount of protection throughout life. Every child should be vaccinated before he is one year old and again early in school life. When properly performed, vaccination is very simple and absolutely harmless. It is a good rule to be vaccinated every five years. If a person is immune, the vaccination will not 'take'."

"Diphtheria is a dangerous disease and the cause of death in many children. No child need have diphtheria. A harmless treatment known as toxoid or toxin-antitoxin protects children against this dreaded disease. Toxoid or toxin-antitoxin has been given in thousands of cases with no ill effect. It is given to well children from six months of age on up. Occasionally it is necessary to give it a second time to produce an immunity. Toxoid is given by a hypodermic injection and is given in two or three doses, a week apart."

Hatchery Again to Hatch Pheasants

Another 1000 pheasant eggs will be placed in Hughes Hatchery here again this year, the chicks to be liberated during the summer when they have attained enough size to care for themselves, according to Ralph Easter.

Last year the hatchery handled the eggs and the chicks were given to farmers for feeding and liberation later. The eggs will be sent from the state game farms sometime in March or early April.

Cost of the hatching is carried by a fund raised by the wildlife committee of the Hillsboro Chamber of Commerce for the purpose of erecting holding pens. Not enough money was obtained to build the pens so the fund has been used in hatching chicks, Easter said.

Crops Get a Good Start with the McCORMICK-DEERING Little Genius Plow

THE whole scheme of crop production hinges on good plowing. It pays to have the best plows you can get. McCormick-Deering Plows have three generations of plow-building experience behind them and are as good as money can buy.

The Little Genius Tractor Plow in 2, 3, and 4-furrow sizes is one of the most popular plows in the McCormick-Deering line. It is built to stand up in any field and to do good, clean work under all conditions. Its parts are held in true alignment even in the hardest kind of plowing. Ample beam and bottom clearance prevents clogging. It is equipped with a spring-trip hitch with a lift-up handle which enables the operator to recouple the plow easily without leaving the tractor seat.

Come in and ask us about the Little Genius Plow and other types of McCormick-Deering Plows and Equipment.
