New Secretary

Leon S. Davis, city editor of the Argus, named secretary of the Hillsboro chamber of commerce to succeed Ed L. Moore, resigned.

Howard of Beloit, Kans., August 20, 1902, and to this union six children were born. A son, William, and a daughter, Anna Brunswick, preceded him in death. The surviving children are: Howard Garwood, Jewell, Mrs. Mary Burgess, Huntsville, Wash.; Mrs. Nellie Fern Brunswick, Cornelius, Route 1, and Mrs. Ruth Wood, Banks, Route 1. A sister, Olive Willis Powells, of North Plains and two brothers, J. D. Garwood of Stevenson, Wash., and George Garwood of Hills, Cal.; a half-sister, several half brothers, and eight grandchildren also survive.

He died September 17. He had suffered heart trouble and a stroke of paralysis.

COTTAGE CHEESE

The cottage cheese grandmother used to make on the back of the kitchen range is what the old-country folk called smearcase or smear cheese. It was mighty good eating. Even in those days, however, cottage cheese was likely to be a temperamental product.

Most of the cottage cheese found on the market today is the mild flavored "popcorn" type, that is, the big flake, low acid kind made with rennet. The size of the flake varies according to local demand. In some sections it's an inch flake, in others a quarter-inch. The larger the flake, the more whey is retained in the center, the less readily heat penetrates it. . . and the sooner it should be used, as it sours more quickly. Any type of cottage cheese is a highly perishable product, however, and should be stored in the coolest possible place and eaten soon.

High quality cottage cheese has a clean, mildly acid flavor, a smooth uniform texture and a tender curd. If a cheese is tasteless or over-acid, or bitter, or has a hard or tough curd, it is either old or has been badly made.

Cottage cheese offers an excellent way of getting more calcium into the diet. Most nutrition specialists consider that the child needs an average of not less than a gram of calcium a day for the best rate of growth and for insuring good teeth. A quart of milk offers even more than a gram of calcium and for that reason has been stressed as essential in the diet of every child. A bit more than half of the calcium of milk is left in the whey when it is transformed into cottage cheese, but even that makes it still a good calcium food.

Cottage cheese is a versatile food. It can be worked into delicious salads, and salad dressings, into desserts, and even into cooked dishes. For instance, it is used in the Cheese Cake given below:

Cheese Cake
1/2 cup butter, softened
1 6-oz. pkg. zwieback, crushed or put through food grinder
1/2 cup powdered sugar
4 eggs
1 cup granulated sugar
1/4 teaspoon salt
Juice 1 lemon
Grated rind of 1 lemon
1/2 teaspoon vanilla
1 cup heavy cream
1 lb. cottage cheese
1/4 cup flour.
Melt butter in bottom of 2x12 pan. Cool and spread over top 2/3 of zwieback combined with powdered sugar. Beat eggs, add granulated sugar, salt, lemon-juice and rind, vanilla and cream. Stir in cheese, then flour. Put through a sieve and beat well. Bake in pan with remaining crumbs on top. Bake 250 degrees for one hour. Turn off heat and leave in oven one hour longer.

Definite Goals Set Under New Program
(Continued from page 1)
and for attaining soil conserving goals. If the former goal is exceeded, or the latter is not reached, payments will be decreased proportionately.

County goals will be based on average acreages in the past, adjusted when necessary to trends in production, and on the recommendations of district and county agricultural planning committees. In each county the agricultural conservation committee will establish for each farm, soil depleting and soil conserving crop goals. Specific crops and practices applying to these goals will correspond in general to those approved for the 1937 program, with such changes as may be found desirable in particular states or districts.
