

Senate Nearing Vote on Truman Strike Measure

The senate was to vote late Wednesday on the question of knocking out the draft strike provision from the emergency legislation for control of strikes against the government as asked of congress Saturday by President Truman. An Associated Press poll indicated that the senate would not accept the draft provision. The house passed legislation for controls Saturday afternoon.

The house Wednesday passed and sent to President Truman the senate's version of the case strike control bill.

Coal Prices "Near"
John L. Lewis met with the United Mine Workers policy committee Wednesday as the N.M.W.'s Ohio district expressed belief in a coal of the soft coal strike is at hand.

The wage policy committee of the U. M. W. apparently ratified a contract with the government Wednesday which would end the long coal strike.

To Fight Truman
A. F. Whitney, a leader in the short-lived railroad strike, declared bitterly Sunday that his trainmen's brotherhood will spend all its \$47,000,000 treasury balance if necessary to defeat President Truman for re-election as result of his plea to congress for restrictive legislation to end strikes against the government.

Marsh Charge Denied
The White House Tuesday flatly denied Senator Marsh's charge that President Truman had knowledge that railroad strike had been settled before he made his speech calling for drastic legislation to curb strikes in congress Saturday.

Molotov Charges Blue
Russian Foreign Minister Molotov Monday charged that a British-American blue waged an offensive against Russia at the Paris conference of foreign ministers in a "desire to impose their will upon the soviet union."

Senator Glass Dies
Senator Carter Glass of Virginia, "father of the federal reserve system" and former cabinet member, died Tuesday in Washington.

Social Gap Condemned
For-receiving proposals by the Douglas "grip-board" to sweep away all social distinctions between army officers and men were made public Monday by the war department with a promise that they will be adopted if feasible.

Building Cut Ordered
The Oregon district civilian production administration construction review committee Tuesday was ordered to effect an immediate slash of 66 2/3 per cent in the dollar volume of building it hereafter will authorize. Edict effective for 45 days. Strikes generally blamed.

Floods Take Lives
Floods in New York and Pennsylvania claimed at least ten lives and caused millions of dollars in property damage. At least ten other persons were missing.

Petrillo Calls Strike
James C. Petrillo, president A. F. of L. American Federation of Musicians, defies new law to curb him by calling a strike at a Chicago radio station Tuesday.

Stolte State Prexy
Dr. Hollister Stolte, health officer for Yamhill and Washington counties, was named president of the Oregon Health Officers association at its meeting in Portland Monday.

Too Fat? Get SLIMMER
This vitamin candy way... Have a more slender, graceful figure. No exercise. No laxatives. No fasting. With the simple AYDOL Vitamin Candy, you can get the slim, trim figure you want. It's easy when you enjoy delicious vitamin candy. AYDOL candy makes meals absolutely delicious.

Cherry Fruit Fly Emerging, Growers Told
The cherry fruit fly is now emerging and control measures should be started at once, according to word received by Palmer S. Trivett, county agent, from S. C. Jones, associate entomologist, Oregon State college. All varieties of cherries, including interplanted trees and fence rows should be sprayed or dusted. In view of the severity of the infestation last year control measures should be applied without delay and should be very thorough.

Five formulas are recommended, any one of which may be used. Two of them are listed below. For further information contact the county agent's office.

Formula No. 1: Lead arsenate two and one-half pounds; water to make 100 gallons of spray.

Add to this mixture one of the commercial spreaders. If cherry leaf spot or brown rot is a problem on your cherries, add lime sulfur two gallons; on sweet cherries add any one of the following fungicides: formalin one and one-half pounds; plus cascin spreader one-third pound; or lime sulfur two gallons; or wettable sulfur three pounds; plus lime sulfur one gallon.

A second application should be applied at the peak of fly emergence, or about two weeks after the first spray. If a third spray is necessary due to heavy rains, apply two weeks after the second.

IN BRITAIN, we read, they have established snail watching clubs. Watching a snail, we imagine, is no different than staring at the same spot for an hour at a time.

The snail carries his house with him wherever he goes so he's staying at home even when he is out for a stroll.

Snails are noted for their lack of speed but then no one has ever seen a snail faint from exhaustion.

A snail could never, of course, escape from an atomic bomb. However, the snail never does anything which would cause an atomic bomb to be tossed in its direction.

The snail has but one foot, so it couldn't kick at its station in life, even if it wished to.

In France, snails are considered quite a delicacy. The first man to eat one was certainly a great, though unsung, hero.

Snails wear their eyes at the end of horns sticking out of their heads. This enables the snail to remain locked up in his house and at the same time keep a sharp lookout for any possible visiting relatives.

Buck Rakes Found Big Labor Saver In Haying Season

Western Oregon hay growers who have made and are using buck rakes in their hay operations are enthusiastic about the time and labor saved by such equipment, according to reports received by M. G. Huber, extension agricultural engineer at O. S. C.

G. E. Dykstra of Lebanon says he wouldn't take \$5000 for his home-made machine if he couldn't make another one. All agree that they are the biggest help in saving time and labor that hay makers have used in many years.

Dykstra puts up from 60 to 75 tons of hay each year which used to require hiring from one to five or six additional men. On this machine the entire hay crop alone except for a boy to drive the derrick horse. Where two men are used, now can spread the hay in the barn about as fast as the other can bring it in on the buck rake.

Kenny Austin of Aurora last year put up 50 tons of hay in 24 hours with three men using a buck rake, compared with the year before when three men required 20 hours using a wagon and hay loader.

Austin's tractor-mounted hay rake hauls about 1200 tons per load direct to the barn where it is dumped on a sling. This same buck rake was also used to put up 50 tons of hay for Bob Clark and 150 tons each for A. R. Buser and the Fick sisters.

F. I. Folsom of Albany made a buck rake using a Chevrolet frame and engine with a Cadillac rear end and wheels. Folsom finds the rake a very economical way to handle hay and uses it both in shocking and hauling. It has saved hiring several men when help was hard to get, he says.

Such power buck rakes consist essentially of two units, the rake itself and the power unit, says Huber. They may be mounted on stripped autos, trucks or rubber-tired wheel tractors or even track layer tractors. Detailed instructions for making these are contained in an extension circular obtainable from any county extension office.

Wheat Program to Earmark Quarter Crop for Export
A comprehensive wheat program for the crop year 1946-47 just announced by the U. S. department of agriculture will affect every Oregon grain grower and livestock producer, says E. Harvey Miller, state PMA director.

The policies announced include the recent raises in grain and protein ceiling prices, and earmarking a fourth of the estimated 1946 wheat crop for export shipment. Emphasis will continue on making the maximum tonnage of wheat available for human consumption, while reducing the amount of wheat used for livestock feed in the country as a whole by half, the announcement states.

The 250,000,000 bushels of wheat for export will be drawn from the 1946 crop through a requirement that half of all wheat placed in elevators be sold immediately into normal trade channels. At the same time, half of all wheat purchased from producers by country elevator operators and other commercial buyers will be set aside for sale to the Commodity Credit Corporation. These provisions will stay in effect until the 250,000,000 bushel requirement is assured.

The price ceiling increases announced on May 8, Secretary of Agriculture Anderson has said, were made to remove uncertainties concerning price relationships throughout the 1946 grain and livestock marketing period and to bring about a better balance between livestock numbers and the grain supplies available for feed.

The need for grain abroad as human food means there will be less pork, smaller production of poultry and eggs, and less top grade beef, although the total supply of all of these is expected to be above pre-war levels, the Washington announcement states.

Consumers will join farmers in conserving the 1946 grain supply, Miller pointed out, with the continuation of the 80 per cent flour extraction provision. In addition, an order effective July 1, 1946, will limit the amount of flour milled each month for domestic use to 85 per cent of the amount distributed for domestic consumption in the corresponding month of 1945.
