Early Spring.

A hopeful blue was in the sky, So dull and blue before, The wind that whistled shrilly by Passed softly with a murmuring sigh, Its revelry was o'er. More steadfast now the sun's warm gaze,

And all the myriad charms That waited for his wooing rays, And lay through all the winter days

Nestling in the earth's brown arms ceped smiling forth, so sweet and shy From out their hiding place; Each had turned upward to the sky When he in kingly pride rode by, Its tiny, emerald face.

The brooklets locked, with icy keys.

Now joyous dashed along, And fleecy clouds in asure seas

Went sailing by, while from the trees We heard the robin's song.

The last pale, wasted snow-drifts in Tearful upon the ground, And while they wept themselves away,

With springing green the earth was gay And glad with tuneful sound.

## Restoring Charred Currency.

The process of the restoration of harred currency and other valuables onstitutes one of the most interesting

constitutes one of the most interesting features of the service in the Treasury Department at Washington. A corre-spondent describes the work as it is carried on in one of the sunny rooms of the treasury building, where four ladies are kept constantly employed. It will be remembered that an express car was recently burned near Washington, The government had \$5,750,000 in it, and the private property, consisting of dia-monds, watches, etc. amounted to half as much more. The jewels and watches only were returned to the express com-pany. The money in the government safes was so olmrred that at a breath it crumpled, and yet four-fifths of it will be deciphered. Each little shriveled piece is detached with a thin knife and laid on blotting paper. There the Star gazing is in order now. At 8 P. M., in the South, a little to the West, be deciphered. Each little shriveled piece is detached with a thin knife and laid on blotting paper. There the ladies examine it with magnifying glasses, and after deciphering as much as possible they paste it on a strip of thin paper; and so, bit by bit, a whole note is pieced out. After her great fire, Chicago sent 200 cases of money, all in cinders, aggregating at owners' valua-tion, \$164,997.98; and out of that sum \$126,541.33 was redeemed and returned to the owners. Boston profited in Chica-go's experience and packed her burnt money so carefully that of the eighty-three cases, containing \$88,812.90, \$88,290.80 were returned to her, beside other valuable papers. The most skill-ful of these ladies once deciphered \$485,000 out of \$200,000 that had been in the hold of a burned ship for three years, and Adams Express Company, which was responsible for the amount, gave her \$500. Another time she and her associates worked faithfully and long over some bonds a crazy cashier threw into the fire. The bank asked \$100,000, but the ladies picked out \$145,000; whereupon the directors, with reckless extravagance, presented them with four dollars apiece!

Star gazing is in order now. At 8 P. s, in the South, a little to the West, and at an elevation of about 45 degrees, inty be seen the constellation of Orion, easily recognized by the four very brill-iant stars in the form of a long quad-rangle intersected by three lesser stars, arranged at equal distances and in a printing on the one side to Sirius-the brightest fixed star in the heavens, -and on the other to the Pleiades, 80 degrees to the West. Between the range intersected by present to the present the brightest fixed star in the heavens, -and on the other to the Pleiades, 80 degrees to the West. Between the range intersection of a long the star at the left upper end, in the eye of Taurus, and five lesser stars. In the North, a little West and just above the inist of the horizon is Cassiopea's chair in an upright position, consisting of five stars of the third magnitude and one or two smaller ones. Almost directly over head, but still slightly South, is the Northeast, and Regulus, a star of the handle. But the brightest object in the mannent these evenings is the planet inpiter, which becomes clearly visible in the morning may see Venus in nearly the same position.-Boston *Evening Transcript*.
