died very suddenly on Smalay morning, a tor is enabled to control his engine, and run it with the same easy and facility as engines are now ron by steam. The parts of the generator and multiplicator are all strength. The connecting pipes are also small and of great thickness, and are oxid-ized and planished so as to prevent the pow escare from being this bard, had a very narforce of the vapor escaping through the pores of the metal. Steam could not pass through the connecting pipes wideh are used on this apparatus, since the bore is only about the mension of a knitting-needle.

With this immense power at hand one would naturally fear an explosion used disastrous in its results. But such it is claimed cannot be the case, since when the vapor comes in contact with the atmos phere, it evalues to expand, and instantly member. goes back to its original state, namely ai

and water, therefore, in this regard it is less dangerous than either gunpowder or steam. The vapor is thinner than air, and not be exploded or caused to fisme by the application of heat to it. A lighted caudle has been held at the mouth of a offensive odor-in fact none was at all perceptible. The rapidity with which this vapor can be generated is almost inappre-" In five seconds," said Mr. Keely

"I can supply 2.050 pounds of vapor to the to the square inch, and chough to ray a train of ten cars from Philadelphia to New York and return." It seems phasest instan-The vapor has a dump, cold feeling. There is not the least noise perceptible in its gen-

cration "Seeing will be believing " in this mat-ter and the sooner Mr. Keely makes his first public exhibition of the invention will the public at large and the world in general come to regard the name of Keely as they do that of Fulton or Watts. Mr. Keely says that the first public exhibition will be upon the Pennsylvania Railroad, when he proposes to take a train from this city to New York and return. He will have the "generator" stationed at West Philadel-phin fill the "receiver" which accompanes the engine and take vapor enough to draw twenty cars to New York and back. The passage of the train will be silent. There will be no einders, no escaping steam, or dropping of coals to set fire to bridges. The engine will be smaller than those now in use, but will be of greater horse power. He says that the generator can either be carried on the train or left at a depot, ac-

ording to the wishes of the engineer. It is small and compact and takes up very little room.

Pacific Slopers.
