POLITICAL NOTES.

May 26.

The Wisconsin Legislature has adjourned, the only important work accomplished being the election of a United States Sonator and the amonding of the Railroad law.

The Harrfurd Times thinks that good citizens will not regret the final end of the Radical Congress that has legislated so largely in the interest of corruption and oppression.

The Pennsylvania Sessie has onanimously passed the bill for the punishment of persons writing threatening latters.

latters.
Leroy Brown, United States Marshal of the Southern District of Minsissippi, has been removed, pending the investigation of charges of malvernation made against him.
The States in which the Civil Rights bill has cased the content of the states of of the

bill has caused the greatest commotion are, atrangely enough, smoon those of the South which have been the best

for instance.

The Union Terula of Columbia, The Union Tevald of Columbia, S. C., exposes, by suggestive figures, one of the methods by which the Treasury of that prostrate State is deplated. The public printing company demands, for alleged printing for the State during the past year, the sum of \$202,889, to be charged against the Sapply bill. In comparison with this, The Union Heraki shows that the outlay for printing of toe States with outlay for printing of ten States, with an aggregate population of over 12,000,000, and tarable property of \$4,967,476,134, is only \$221,051. The population of South Carolina is 705,806, and the taxable property only \$141,624,950.

| March | Marc William L. Powleson, the engineer in charge of the boilers and machin-ery in the Cosmopolitan Hotel, has lately received a patent for an im-provement in smoke-consuming fur-naces. The invention is attracting much attention among furnace men and others, and is destined to exer-cise an important influence upon all interests stentified with steam eninterests stentified with steam engineering. The invention consists simply in carrying steam from the drum through a pipe into a superheater and conveying it thener through smaller pipes under the furnace to four nozzles which are set in the front of the fire chamber above the burning fuel. Each of these nozzles discharges a fan-tail jet or spray of hydrogen gas, spreading the burning fuel. Each of these nozzles discharges a fan-tail jet or spray of hydrogen gas, spreading horizontally across the burning fuel. Thus a complete mixture of the smoke and steam is effected and the carbon in the former while burning intensifies the heat. No smoke escapes, it being all consumed by this process. The flow of steam is regulated by a stop cock to the amount desired for burning the smoke. Mr. Powleson having been placed in charge of a furnace in which he could get little or no draft, went to work a year ago and made some experiments to remedy the difficulty. While thus engaged the ides of introducing superheated steam into the furnace occurred to him, and after several attempts to do so he at last met with success. A saying of nearly thirty per cent. In the amount of fuel required the absence of all soot from the flues, and the rapid creation of intense heat are among the principal fruits of this invention. Its application to the amelting of over will greatly cheapen the cost of reduction. The patent is to be applied to the bailers in the Palise, itetal and also The patent is to be applied to the boilers in the Palses Hotal and also in the Mint.—Chronicle.
