The danger is more likely to pass unobserved because of the various odors which scent the place and which mask the deadly emanations. The exhibition will cover a wide field. Practical forestry will include butts, implements, models of machines for moving trees by land and water, and wood-working machinery of every description. Scientific forestry will deal with the botany of the forests, for entomology, preservative processes and similar subjects. Growing specimens of rare and ornamental plants, rustic work and dried ornamental objects of a vegetarian origin will be in view.

Neither Anna Dickinson nor Kate Field will take advantage of leap year.
