**KIDNEY AND LIVER CURE**  
 Scientists now all admit that most diseases are caused by disordered kidneys or liver, and that if these great organs are kept in a perfect condition, health will be the result. WARNER'S SAFE KIDNEY AND LIVER CURE is made from a Simple Tropical Leaf and is a POSITIVE Remedy for the following Troubles:  
 Pain in the Back; Severe Headaches; Bizziness; Blinding; Inflamed Eyes; A Tired Feeling; Night Sweats;  
 Pains in the Lower Part of the Body; Palpitation of the Heart; Jaundice; Gravel; Painful Urination; Malarial Fever; Fever and Ague;  
 And all diseases caused by the Kidneys, Liver or Urinary Organs being out of order. It is a Blood Purifier. It is unequalled for it cures the original MARK'S BLOOD PURIFIER.

**PATENTS**  
 We continue to act as Solicitors for Patents, Caveats, Trade Marks, Copyrights, etc., for the United States, Canada, Cuba, England, France, Germany, etc. We have had thirty-five years' experience. Patent obtained through us are guaranteed to be successful. This large and splendid illustrated weekly paper, \$3.20 a year, shows the Progress of Science, is very interesting, and has an enormous circulation. Address MUNN & CO., Patent Solicitors, 379 N. 3rd St., New York. Hand book about Patents free.

**Weekly Corvallis Gazette.**  
 FRIDAY MORNING, SEPT. 8, 1882.  
 IN SANCTUARY.  
 While pale with rage the wild surf springs  
 Aboard the harbor bar,  
 The safe ships fold their snowy wings  
 Beneath the evening star.  
 In this calm haven rocked to sleep  
 All night they swing and sway,  
 Till morning's o'er the morning deep  
 The golden bluffs of day.  
 Here safe from all the storms of fate,  
 From worldly rage and scorn,  
 Trustet me fold my hands and wait  
 The coming of the morn.  
 While all night long o'er moonlight turt  
 The wind brings in from far  
 The moaning of the ballad surf  
 Aboard the harbor bar.  
 Harper for August.

**Wheat Consumption of the State.**  
 In estimating the surplus wheat for export from any particular crop, some most extraordinary estimates are made of the consumption of the State. For the benefit of those who may engage in such speculations, we submit the following. The consumption of Great Britain and Ireland in 1880 was 196,600,000 bushels or about 6 1/2 bushels per head. Now there are large numbers of people in the British Isles, who use potatoes and have little or no bread. Everybody in California used bread. The consumption of this State and the adjacent states supplied hence, will not be less than that of Great Britain. There are a million people to supply, needing six and a half million bushels, or 3,600,000 cents. The area seeded in 1881-82 was three million and a quarter acres, which at a bushel and a quarter to the acre, makes about four million bushels, or 2,400,000 cents. For the manufacture of spirits, about 750,000 cents were used throughout the State. Then there was not less than a million and a quarter cents of cheap wheat—\$1.25 @ \$1.40 used for feed purposes, starch manufacture, etc.—San Francisco Journal of Commerce.

**General Purpose Animals.**  
 Almost all intelligent breeders recognize the fact that special fitness for any one purpose is rarely accompanied by equal fitness for any other purpose. The typical milk cow is not the model for a beef-making animal; the fast trotting or running horse is not a first-class animal for heavy draft. With this law in mind it is natural to give and act on the advice—First, choose what you want your animals for, and then breed with exclusive reference to that one purpose. For a large class of breeders and stock raisers, this advice is the best that can be given. But it is a serious mistake to give advice without qualification. Specialty farming and specialty stock-breeding are best for a considerable number, but are not best for the mass of farmers. There is a good demand for heavy draft horses, also for fast trotting or fast running horses. The breeder of first-class milk cows will find a ready sale for them, without reference to their capacity for making beef. The breeder of sheep, giving phenomnally large fleeces, need trouble himself comparatively little about their mutton character. But while all this is true, we must not forget the fact that the largest demand is for general-purpose animals. Is the well settled portions of our country, at least, three animals out of four—certainly of horses and cows—are owned by men who cannot afford to give exclusive attention to any one excellence. For the general farmer, neither the heavy draft, the runner nor the trotting horse is best fitted, and this is true of the average business horse in the towns and cities. The special dairy-men may do well to look exclusively to milk-giving qualities; the "steer-raiser" may be wise in counting a large flow of milk an absolute fault for his purpose. But three men out of four, who rear and own cows, must look to both milk and beef for profit. The majority of sheep owners cannot afford to be indifferent, either to the fleece or carcass. It is not a mistake, then, to claim as a recommendation for a breed, that it is reasonably well fitted for a secondary purpose, or good for two distinct lines of work.

**Chinese Steel.**  
 A considerable steel-making industry exists at present in China, on the upper Yangtz, whence the steel is sent to Tientsin for shipment and distribution. It realizes much higher prices than the Swedish steel im-

**Imported into the country.** The Chinese metallurgists recognize three kinds of steel, viz., that which is produced by adding unwrought to wrought iron while the mass is subject to the action of fire; pure iron many times subjected to fire, and native steel, which is produced in southwestern China.

**What the Order has Done**  
 As we look at the Order to-day, we find it has yielded nothing to drones. It has disappointed those whose chief idea was that it would break down middlemen and be a money-making institution. But it has in numberless instances, more than fulfilled the expectations of its best friends. There are fewer Grangers to-day but they are better ones. There are thousands of farmers to-day in the Order who have learned to speak in public, to preside at public meetings, and think and reason as they never did before. There are many who are becoming leaders and educators through the influence of the Order. A regular plan of work has been laid out and questions of farm management and home comforts are regularly discussed in their meetings. More agricultural papers are read, and in many neighborhoods libraries are established and lecture courses sustained by the Order. We speak of which we have personal knowledge, in affirming that, in many neighborhoods the Grange has accomplished wonders. It has softened political asperities by bringing those of opposite parties together; it has cultivated the social nature, educated the young in music and to a large extent in literature. Hundreds of Grange halls have been built and furnished, and as the object of the Order has been shown to be the education of the farmer, rather than war on other callings the public have come to respect it.—Ohio Farmer.

**Early the other morning** a little black dog, unmuzzled, unregistered and consequently untaxed, entered the yard of a gentleman who owns a pair of handsome cats, perfectly watched in size and color. As the dog went trotting up to the house with the confidence of a prize pup or a book agent, the cats arched their backs preparatory to bearing down on the canine intruder like an ironclad. The dog was unmindful of danger until he was struck amidship by a feline cyclone that caused him to tremble and careen, and was only saved from upsetting by anchoring under the lee of an ash barrel. And even here he was not safe. The cyclone clawed around west by nor' nor' west, and struck the bark in the bow (wov) sprit, making things fairly howl. As the bark righted her nose came into the teeth of the cyclone, when it was a fight dog fight cat with an evan chance for the canine. At this point cat No 2 came up like a storm and flew at the anchor end of the dog, which was wholly unprotected. Then there was a scene for a marine artist. There was plenty of bark but no ocean. There were waves of cats and dogs and billows of foam, as the storm fended and their victim circled round and round that beautiful lawn in the gray light of the early morn. And the storm only subsided when a black streak was seen to shoot out of the yard, and the two friendly felines found themselves face to face, with no foe between. That black streak was a demoralized dog, who may have imagined that he had been in a storm where it rained cats.

**White Flannels Best.**  
 Often we are asked the question, which is the best for health, red flannel or white? We answer white for the following reasons—1. White flannels are warmer. 2. It contains no artificial coloring matter, as red flannel is likely to do, and hence cannot be a source of poisoning, as the latter frequently is. 3. It is more durable, and for the readiness with which it shows oil is likely to be kept more cleanly. The popu-

**Real Estate for Sale.**  
 Will sell a farm of 478 acres for less than \$18 per acre, being one of the cheapest and best farms in Benton county, situated 4 miles west of Monroe, 1 1/2 miles from a good school, in one of the best neighborhoods in the state with church privileges handy. About 120 acres in cultivation, and over 400 can be cultivated. All under fence, with good two story frame house, large barn and orchard, has running water the year around, and is well suited for stock and dairy purposes. This is one of the cheapest farms in the Willamette Valley.  
 Also, two improved lots on the main business street with small stable, woodshed and a good, comfortable dwelling house containing seven good rooms. These lots are nicely situated for any kind of business purposes.  
 For further information enquire at the GAZETTE Office.

 A SALLOR'S PEN FICTURE.  
 Early the other morning a little black dog, unmuzzled, unregistered and consequently untaxed, entered the yard of a gentleman who owns a pair of handsome cats, perfectly watched in size and color. As the dog went trotting up to the house with the confidence of a prize pup or a book agent, the cats arched their backs preparatory to bearing down on the canine intruder like an ironclad. The dog was unmindful of danger until he was struck amidship by a feline cyclone that caused him to tremble and careen, and was only saved from upsetting by anchoring under the lee of an ash barrel. And even here he was not safe. The cyclone clawed around west by nor' nor' west, and struck the bark in the bow (wov) sprit, making things fairly howl. As the bark righted her nose came into the teeth of the cyclone, when it was a fight dog fight cat with an evan chance for the canine. At this point cat No 2 came up like a storm and flew at the anchor end of the dog, which was wholly unprotected. Then there was a scene for a marine artist. There was plenty of bark but no ocean. There were waves of cats and dogs and billows of foam, as the storm fended and their victim circled round and round that beautiful lawn in the gray light of the early morn. And the storm only subsided when a black streak was seen to shoot out of the yard, and the two friendly felines found themselves face to face, with no foe between. That black streak was a demoralized dog, who may have imagined that he had been in a storm where it rained cats.
