J. & C. FISCHER'S PIANO,

The leading and best second-class Piano on the market.

Old and Established Standard Mason & Hamlin Organ. Will be in Corvallis and vicinity from time to time to sell these leading instruments of the world, unfair and unprincipled opposition to the contrary notwithstanding. Weekly Corvallis Gazette.

FRIDAY MORNING, SEPT. 15, 1882.

The Dairy vs. Oleomargarine. The following bill has been introduced in Congress which we trust will be considered favorably and passed at the earliest possible moment. The bill provides for the

stamping the name on all eleomar-

garine packages.

The American dairy is hardly third of a century old. Starting in the eastern counties of New York it raised people and land from poverty to thrift, until the industry now embraces almost the entire area of New York, much of New England, Pennsylvania, and Ohio, Southern Michigan and Wisconsin, Northern Indiana and Illinois, Northern Missouri, Iowa, Minnesota, Nebraska, Northern Kansas, Colorado, and California, with parts of Dakota, Wyoming and Washington Terri-

It is the great national industry. The money value of its annual product is greater than the wheat crop, more than corn, more than cotton and wool combined, reaching to between four and six hundred millions of dollars.

From five to eight millions of our people are interested in the industry. The capital invested in dairy lands, cows, utensils, etc., is estimated to reach from \$4,000,000,000 to \$6,000,

Once 100 pounds of butter to a cow was a fair average. Now from 250 to 300.

Once the grass upon the land, worn out by overcropping with grain, would hardly pay for cutting. Now 3 tons to the acre is not an uncommon yield.

Butter and cheese are the only commodity for exchange which brings money to the dairying farmer.

Once, with butter at a shilling a pound, and cheese at 5 or 6 cents, heavy mortgages for the purchase money of the land, the farmers were impoverished and their families with out education or home comforts.

The extraordinary demand created by the war brought remunerative prices. Debts were paid, the land unburdened and the dairy farmers became the first yeomanry the world ever saw.

OLEOMARGARINE.

In 1869 a Frenchman by the name of Mege Mouries, took out a patent Number of beeves killed per in England for making butter from

In 1873, one Pasf (another chemist) patented the process in this country, and organized a large company in the city of New York, known as Oleomargarine Manufacturing Com-

Later on, in the same year, the Mege Mouries patent was issued in and reissued in the following year. The points covered by the patent

First. The rendering of the oil from the fats at the low temperature of 120° thereby avoiding the animal or tallowy odor in the product which would obtain with a higher degree of oleomargarine butter. The entire

Second. Converting the oils, by 1875 was 111,180,413 pounds. churning them with milk, into but-

The components and process of the manufacture are as follows:

The caul, omentum, and all the intestinal or offal tats of beeves are purchased of butchers, the average amount being about 100 pounds to the animal. They are then trimmed fleshy substances that adhere, which are carted away.

After washing in cold or tepid water (and, of course, without soap) for the removal of any blood, dirt or fecal matter, the fats are put through what is called a "hasher," by which they are finely divided and reduced into a pultaceous or jelly-like mass, then passed into a kettle, where they are submitted to a heat 120° or less, in making candles." when, after various manipulations, it is placed, in small quantities, between cloths, in a large press, where pounds of the crude fats is obtained about the following products:

Socarine for candles..... Common tallow 10

The oil is then ready to make into

imitation is so much like the gen- Farmer, uine in appearance and sensible qualcept the most skillful experts to-distinguish the difference,

Extent of its manufacture-Be ween 1874 and 1878 its manufacture made a little headway. But during the past three years it has advanced with alarming rapidity. One establishment in the city of New York has nine churns; 610 pounds is the product from a single churn. Product of 9 churns, 5,490 pounds in 40 minutes-200,000 pounds per week

Per year..... 10 400,00

Other city factories (estimated)..... Other New York States

Or about one-fifth the total dairy product of the State.

Loss to dairy interest each year is variously estimated from 50 to \$200.

Under the Mege Mouries patent alone 15 large factories prior to the spring of 1881 had been established in or covering the cities of New York, Boston, Philadelphia, Baltimore, Pittsburgh, Cincinnati, Saint Louis, Chicago, Buffalo, Cleveland, Albany, Louisville, Detroit, Omaha, and San Francisco.

Possibilities for its manufacture in the city of New York alone:

week..... Allowing 100 pounds offal fat per young stock." heed, from which 35 to 40 pounds of "oleo" is extracted, which, by the addition of such inexpensive materials as milk and salt, increases the manufactured product about 25 per cent., the fair average vield of butter is about 45 pounds per head. this country, by Mouries himself, Multiply this by 520,000 and we have 23,400,000 pounds. Allowing that one-fifth of the number are slaughtered in New York City, we have four-fif he to add to the above product to represent the possibilities of the entire State production, making an agg egate of 116,000,000 lbs dairy bu ter product of the State for

> The following extract from Apple ton's Annual Encyclopædia for 1879, and quoted in Commissioner Raum's letter to the committee, is also sub-

"Oleomargarine, which is now extensively manufactured from animal fat, as a substitute for butter, is dreaded as a vehicle for infecting the from pieces of intestines and other human system with trichinae and other internal parasites. The fat is not subjected to a higher temperature than 120° Fahr. John Michels, a New York chemist, states that the refuse fat of one pork-packing establishment is, to his knowledge, sent to the artificial butter factories; and Professor Church found in Oleomargarine horse fat, fat from bones, and waste fat, such as is ordinarily used

The degree of heat (120° Fahr) applied in its manufacture is not sufficient to kill trichinae or other the oil is pressed out. From 100 animalcula and parasites; and it is feared that when the manufacture is relieved from the scrutiny of legislative investigation the fats from which 40 it is made will be selected with less care and conscientiousness, and the public will be not only defrauded but exposed to disease and death.

It is said that oleomargarine furnishes a cheap article of tood for the poor in lieu of the expensive article of genuine dairy butter; but the poor can least afford to pay the price of genuine butter for a cheap imitation; and it is to protect the poor consumer against this fraud that Congress

The Hog.

healthy than he can be happy without wallowing. He gets very hot about the first of July. He is not, or ought not to be, emaciated. He is a short, thick neck, and his lungs are not as large as they might be. He cannot fan himself nor use an umbrella. His best way to cool off is to get in a hole filled with very dilute mud. There, too, he can bid defiance to the flies. He coats his factories about 5 000,000 hide with mud, in which the vermin of his body (if he has any) are confined, and when he scratches himself against the trunk of a tree the vermin are scratched off with the mud.

Shorthorns.

Bell's Messenger says of the Shorthorns at the late show of the Royal Agricultural Society: "It was a no less hopeful sign to see the cattle classes so well fined, and especially pleased were we to find that the appearance of the Shorthorn classes furnished a most complete answer to an assertion one often hears of late to the effect that this particular breed is losing ground. That they are in as great d mand as ever, was manifested from the fact that there were 10.000 several new names among the exhi-Per year 520,000 bitors and a most promising show of

Those Suffering from Debility, Nervous Prostration, Loss of Vitality, Sexual Infirmities, Etc., Etc.

THE GREAT NEED THOSE HAVE WHO ARE suffering from SEXUAL AND NERVOUS COMPLAINTS is a physician who can comprehend their allments and successfully treat them.

The general practitioner is not sufficiently skille in these classes of troubles to do so and it must beleft to the SPECIALIST, who by education, lon practice, thorough knowledge and comprehensive mind, is prepared to cure them.

DR. J. C. YOUNG

Opened his now celebrated Institute in 1850 for the purpose of affording the afflicted the certainty of nonorable and skillful treatment and perfect and permanent restoration, and for over 30 years it has sustained the first rank not only upon this Coast but hroughout the civilized werld.

I am aware that by dwelling upon so uninviting a subject as the DECAY OF SEXUAL VIGOR the process. the desire to inform these who are suffering through ignorance, or who by carecan be had, are not only hurrying them-selves to an untimely grave, but giving sexual weakness as an inheritance to future genera-tions, is too great-an incentive to permit me to be silent.
