Will be in Corvallis and visit from time to time to sell these leading instruments of the world, unfair and unjust position to the contrary notwithstanding.

Weekly Corvallis Gazette.
FRIDAY MORNING, OCT. 6, 1882.

ART AND SCIENCE.

In seeking for a substance which would destroy the microscopic animals in water without injuring it for drinking purposes, Dr. Langfeldt found that the citric acid (one-half gramme to every litre of water) killed all the living organisms, except cyclops and those with thick epidermis, within two minutes.
In the competition for designs for new buildings for the imperial Parliament at Berlin, the first prize was awarded to Herr Paul Wallott, who is under forty years of age, and the second prize to Herr Thiersch, who is a little more than thirty. Many architects competed, of greater age and established reputation.

An exchange says that if a few drops of ether or alcohol are let fall upon a piece of paper that has been equally moistened with cadmium and iodide starch solution, and the volatile liquids set on fire, the paper will be found, after combustion has ceased, to have attained a blue color, owing to the production of ozone during the experiment.
In the early stages of typhoid fever Dr. Guillaume, of the French Navy, has administered coffee with marked success. Three tablespoonfuls are given adults every two hours, alternating with one or two teaspoonfuls of claret or Burgundy wine. A beneficial result is immediately apparent. A little lemonade or citrate of magnesia is also administered daily, and after some time quinine is recommended.

Salicylic acid as a disinfectant for cattle pens is said to be far preferable to carbolic acid, as it is quite as energetic, and leaves no unpleasant smell behind. It is employed largely abroad by veterinary surgeons, as a curative agent for many diseases to which animals are subject, and is found useful in checking the spread of contagion among them. Its most important use, however, is for the preservation of food. During the prevalence of hot weather meat, fish etc., can be preserved by its use for several days.

Dr. Siemens thinks that before many years have passed ships will be made of such tough "mild steel" that when they strike upon a rock they will not spring leak, but only "bulge several feet." These ships will be driven by electricity or gas, for in the opinion of the learned President of the British Association, the steam engine is doomed. Raw coal is to disappear as a fuel, and then science will have banished "the black pall of smoke that hangs over our great cities, and restore to them pure air, bright sunshine and blue skies."

Herr Heinrich Umler, an engineer of Kottbus, Germany, has just patented a "penetrable safety wall."

The wall is to be made of papier-mache prepared after a patented method. The interior wall in all parts of a theatre from the pit to the galleries is to be made of the paper. Such a wall will have all the appearance of a massive stone wall, but by pressure upon certain parts, where the words are to be painted in luminous letters. "To be broken through in case of fire," access to the exterior corridors is to be obtained, whence escape to the outer air can be made.

The Shakespeare Museum at Stratford-on-Avon has lately suffered severe criticism. A Mr. Geary declares that many of the relics are "childish and in no way instructive." C. M. Ingleby, one of the museum trustees, replies in the London Times that they are not ignorant of the inadequacy of the museum nor indifferent to its improvement. He also states that J. O. Halliwell-Phillips, the well-known Shakespearean critic devoted many weeks last year to a separation of the contents of the museum, with a view of removing every article which has no bearing upon the life and times of Shakespeare.

To imitate black ebony, first wet the wood with a solution of logwood and copperas, boiled together and laid on hot. For this purpose two ounces of logwood chips with one and one-half ounces of copperas, to a quart of water, will be required. When the work has become dry wet the surface again with a mixture of vinegar and steel filings. This mixture may be made by dissolving two ounces of steel filings in one-half pint of vinegar. When the work has become dry again sand paper down until quite smooth. Then oil and fill in with powdered drop-black mixed in the filler. Work to be ebonyized should be smooth and free from holes, etc. The work may receive a light coat of quick-drying

varnish, and then be rubbed with fine pulverized pumice stone and linned oil until very smooth.

INVISIBLE POISON.

How it Works its Way Into the Body and How to Counteract it.
One of the great scourges of the present year in all parts of America has been malaria. This is a trouble so treacherous in its nature and so dangerous in its results as to justify cause apprehension wherever it has appeared. But there are so many erroneous ideas upon the subject that a few words are in order at a time when people are subject to malarial influences.

Malaria, which means simply bad air, is the common name of a class of diseases which arise from spores of decaying vegetable matter, thrown off from stagnant pools or piles of vegetation undergoing decomposition. These spores when inhaled with the breath or taken into the system with water soon enter the blood and germinating there find a foothold, whereby the whole system is poisoned and the various functions disordered. When the germ theory of disease was first advanced it was supposed that these spores were of animal nature, and like the bacteria in diphtheria were propagated in the blood, but they are now conceived to be of vegetable origin, like the fungi found on decaying wood or in cellars. The source of this state of the air is generally swamps or stagnant pools, which, partially dried by the hot sun, send forth vapors loaded with this malarial poison. These vapors descend to the earth in the night, cooled by the loss of temperature, and breathed by sleepers are readily inhaled. Hence persons living near stagnant pools or marshes are liable to be afflicted with chills and fever, and such localities are never healthy, though they are more so when the streams flowing into them are pure, and also when the water is high. Again the drainage of houses, slaughter houses, barns, etc., are a fertile source for malaria. One will often notice in coming into the neighborhood of one of these sluggish streams that pass through almost every village a most villainous smell caused by the offensive refuse which communicates its bad odor to the atmosphere, especially on hot days. This absorbed into the system by the lungs or taken in through water, which also absorbs it from the air, poisons the blood and deranges the whole system. This poison is also developed in force in wells and springs when they become low, and the result of drinking these is the same as breathing the poisonous air. In a time of drought the great quantity of vegetation that dries up in the meadows, stubble fields and pastures, the corn fields and forest leaves produces the same effluvia. On the prairies when large tracts of prairie ground are turned over, the decaying vegetation is a widespread cause of malaria.

The evils which follow malarial poisoning are almost infinite. Disease of a malignant and dangerous nature, accompanied by symptoms the most distressing are certain to manifest themselves and life is a burden so long as this poison remains in the system. The indications of malarial poisoning are loss of appetite, shortness of breath, pains about the heart, wasting of flesh and strength, despondency, nervousness, chills, sensations, unaccountable lassness, dull pains in various parts of the body, headaches, dizziness, a coated tongue and dry mouth, night sweats, muscular debility, puffing under the eyes, an unusual color, or odor or sediment about the fluids passed from the system, etc. Any one of the above symptoms may be an indication of malarial poison in the body which necessitates immediate and careful attention.

But if malarial poison could not find a lodgement in the human body, it would be just as harmless as the oxygen of the air. The great difficulty is that, after being absorbed into the system, it produces obstructions in the stomach and lungs, clogs the circulation of the blood, affects the kidneys, liver and other organs, and brings on disease of a most dangerous character. There is only one known way by which these diseases may be avoided or cured after they have once made their appearance, and that is by keeping the great purifying organs of the body in perfect health. These organs are the kidneys and liver. No one whose kidneys or liver are in a perfect condition was ever afflicted by malarial poison. And when these organs are disordered, they not only permit, but invite, these diseases to make their inroads into the body. It is now admitted by physicians, scientists

and the majority of the general public that one medicine, and only one whose power has been tested and proven, has absolute control of, and keeps the kidneys and liver in constant health and hence prevents malarial sickness. This remedy is Warner's Safe Kidney and Liver Cure, the most popular medicine before the American people, and sold by every druggist in the land. It fully counteracts the evil effect of malarial poison in the system, and not only banishes it, but restores the members which that poison has weakened. How well it does this can be learned from the following:

KANSAS CITY, Mo., June 26, 1882.—Moving from the state of New York to the western country, I was attacked with malaria and general debility. I had lost all appetite and was hardly able to move about. I had tried a great many remedies, but nothing bettered my condition until I began using Warner's Safe Kidney and Liver Cure, which seemed to help me right away, and I feel as well as I ever have in my life. It is a blessing to people in this malarious country.
C. F. WILLIAM.

1412 Grand Ave., of William & Co., Hardware.
This great remedy has proven its power in innumerable cases, and is to-day more extensively used in malarial districts, whether in cities or in the country, than any or all other remedies for the cure of the same class of disease. No one can afford to trifle with the first symptoms of malaria, but instant care should be taken to check it on the start before its evil influences overshadow the life.

TO THE SICK AND AFFLICTED!
—AND ESPECIALLY—
Those Suffering from Debility, Nervous Prostration, Loss of Vitality, Sexual Infirmities, Etc., Etc.
THE GREAT NEED THOSE WHO ARE SUFFERING FROM SEXUAL AND NERVOUS COMPLAINTS is a physician who can comprehend their ailments and successfully treat them. The general practitioner is not sufficiently skilled in these classes of troubles to do so and it must be left to the SPECIALIST, who by education, long practice, thorough knowledge and comprehensive mind, is prepared to cure them.
DR. J. C. YOUNG
Opened his now celebrated Institute in 1856 for the purpose of affording the afflicted the certainty of honorable and skillful treatment and perfect and permanent restoration, and for over 30 years he has maintained the first rank not only upon this Coast but throughout the civilized world.
I am aware that by dwelling upon so uninviting a subject as the DECADE OF SEXUAL VIGOR the ignorant may asperse my motive, but the desire to inform those who are suffering through ignorance, or who by carelessness or want of knowledge that a cure can be had, are not only hurrying themselves to an untimely grave, but giving sexual weakness as an inheritance to future generations, is too great an incentive to permit me to be silent.

SYMPTOMS.
IF YOU ARE SUFFERING FROM NIGHT LOSS, NERVOUSNESS, WEAKNESS, CONFUSION OF MIND, SLIGHT LOSSES WHEN UNDER EXCITEMENT, UNSTEADY TEMPER, TREMBLING PALPITATIONS, FLUSHES, AC, OR IF YOU HAVE PRACTICED SELF-ABUSE EVEN IN THE SLIGHTEST PARTICULAR, you are suffering from the
Dread Enemy of Human Life,
And should not hesitate to seek at once health and happiness in a cure.
CURES GUARANTEED. FEES MODERATE. CONSULTATION BY LETTER OR OTHERWISE—FREE.

Exclusively Vegetable Remedies Used.
Ladies.
You are especially liable to suffering from NERVOUS PROSTRATION. All your peculiar complaints are nervous in their origin and hence your sufferings are terribly depressing or unexpressibly keen. The Doctor in his researches and practice of NERVOUS TROUBLES has made your organization a special study and is thus enabled from his experience and knowledge to aid and cure you in any of the following troubles, weaknesses, distresses and sufferings which you are liable to:
If you will find in the Doctor's friend upon whom you can rely for comfort, aid and cure.
Dr. Young's Female Remedies have attained a reputation for efficiency unequalled by any medicine or medical prescription ever offered. They can be sent by mail or express.
Those desiring personal care and attention can have all necessary accommodations furnished.

Letters.
Those who cannot visit the city can by giving their symptoms in their own way, receive advice, and when desired, treatment at home with every assurance of a cure.
LETTERS RETURNED OR DESTROYED.
