Mangin has proposed the use of incandescent electric lamus immersed in water contained in glass globes. The safety of such an apparatus has been demonstrated by placing it in the middle of a balloon filled with hydrogen. The idea has become current that submarine telegraphic cables do not last more than ten years, but, according to Sir Daniel Gooch, M. P., repairs on one of the Atlantic lines last year showed the cable to be still in good order after a submergence of thirteen years. Some curious stones are found in many parts of Switzerland. They are smooth, lat, evidently hand polished, and are covered with dots, lines, circles and half-circles. In the opinion of Herr Rodiger, these stones are charts of the country made by prehistoric inhabitants, and he claims to possess a collection of stones picked up in Solothurn
