The Corvallis Gazette, February 13, 1900

LOCAL AND GENERAL

Jerry Lasson KILLED BY A Failing Tree.

IN THE RURALIZATIONS

Thick-Grained Socialism--ignorant of the possibilities of Modern Thorstein Veblen.

The scene still continues to hold wonderful interest for the farm families of this part of the country. On Thursday, February 9, 1900, after several weeks of hardship and distress, the winter wheat began to be harvested. The next step was to hold on March 1, 1900, when the weather was perfect for such work. The work was very hard, but there was no public sale. The bread of the people was provided in their own hands, and it was hard to build up a credit system. Agriculture, which is likely to be the bread which will form the base of our society, was rather neglected in the winter months. The weather was rather too cool and too wet for the crops to develop. No one anticipated a harvest, but the crops were ready for harvest by April 15.

A dynamic wave of change has been sweeping across Corvallis. Among the most notable are the new plans for the new school, the new hospital, the new library, and the new book store. The changes are being felt throughout the community. As of today, the changes have been in the making for several months.

Walden's went straight, the new breed, the typical Corvallis wheat, is now being grown in the city. It is a hardy, disease-resistant variety that is proving to be a significant change from the past. The wheat is being cultivated on a large scale, and the city is expected to become a major wheat producer in the near future.

The corn has been particularly successful, with yields up 30% over the previous year. This has been due in large part to the use of new farming techniques and better seed varieties.

The city is also making progress on the water system, with a new dam being constructed to provide a more reliable water supply. The dam is expected to be completed by the end of the year.

The city council has also been working on the streets, with plans to repave all major streets in the next five years. This will improve the city's appearance and make it more attractive to visitors.

The city's parks are also being developed, with plans to create new trails and improve existing ones. This will provide more opportunities for outdoor recreation.

The school system is also being modernized, with plans to build new schools and upgrade existing ones. This will provide better facilities for the students and improve their educational experience.

Overall, the changes are exciting and promising. The city is moving forward, and the future looks bright.
