

Highest of all in Leavening Power.—Latest U. S. Gov't Report

Royal Baking Powder

ABSOLUTELY PURE

WYLLIE, THE HERD LADDIE.

Scotland's Great Checker Player Still Expert at the Age of Seventy-six.

Sixty years a champion is the remarkable record of James Wyllie, the most famous checker player in the world. Wyllie was champion of the town of Kilmarnock, Scotland, when but 15 years of age, and by virtue of his marvelous record against the best players all over the world for half a century he may be reasonably called the greatest checker player on earth. Wyllie is now 76 years and very deaf, but his sight is still keen, and he is yet able to defeat nearly any man he meets. "I'm too old for fights," he says sadly, but he usually manages to win whenever the stakes are worth securing.

Wyllie was born in the Pierce Hill tracks, near Edinburgh, in 1820, and the time of his birth his father was sergeant major in the Scots Guards. As a mere lad Wyllie was apprenticed to a Kilmarnock weaver, but his remarkable skill as a checker player made him famous and induced him to abandon learning the weaver's trade. A drover named Portens whom young Wyllie had beaten took Wyllie to Edinburgh and surprised the natives. Portens began a game with a local player of reputation named Bertram and then found an excuse to drop out of the contest. "Let my herd laddie play for me," he said. Bertram consented, and to his amazement the herd laddie won 59 games out of 60, and Bertram only succeeded in securing a single draw. The story of this achievement gave Wyllie great local fame, which was increased when he defeated Professor Andrew Anderson and Robert Martins, two great Scotch players.

Wyllie then became a watch peddler and traveled about Scotland selling pieces as a regular business and trying checkers for money against all comers. "A shallem a game" was his nice no matter who played against him, and when he first visited America in 1873 he charged his opponents 25 cents a game. During this tour he played over 11,000 games, losing less than 50. In 1881 he again visited America and won 17,664 out of 19,517 games, or 1,754 and lost only 109. In match play he defeated C. F. Barker, the celebrated Boston expert, but was beaten by Clarence A. Freeman, the Providence expert, who is of Indian descent, and the late R. D. Yates of Brooklyn. Wyllie also played throughout England and Australia and has made a great deal of money as the result of his skill.

THE WHITNEY-PAGET MATCH.

Whitney's Betrothed an Englishman Has Become Wealthy in America. The many other American heiresses, Pauline Whitney, the eldest daughter of ex-Secretary of the Navy William Whitney, is to marry a young Englishman of wealth and distinguished pedigree, but her Englishman, Almeric Paget, has made his money in America. An adopted citizen of the United States and is a resident of St. Paul. He is the youngest son of the late Lord Alfred Paget, an officer in the British army and chief equerry to the queen. His eldest brother, Arthur Paget, is a colonel in the Scots Guards. In 1878 married a daughter of the late Baroness Stevens, the New York City heiress. Another brother is Captain Alfred Paget of the British army, present head of the family, the son of Anglesy, is a cousin of Almeric H. Paget and in 1880 married a daughter of J. P. King of Sand Hills. The couple did not live happily together and have separated. When Almeric H. Paget was 16 years old he concluded that his position as youngest son was not very promising, accordingly he came to America to

MISS PAULINE WHITNEY.

his fortune. At first he worked on a ranch in the far west and later moved to St. Paul, where he engaged in real estate business and made a deal of money during the days of "boom." He apparently knew when to sell, for he not only made the money he had made, but he kept his store. He then succeeded in investing British capital in America and became the successful manager of London and Northwest American Cattle Company, limited, which position he still holds. Several years ago he met Miss Whitney, a young woman who was crossing the Atlantic with her father. He joined the Whitneys in a tour of the west, and his engagement to Miss Whitney followed. Miss Whitney is about 25 years of age and is a tall, handsome, bluish young woman, who is very popular in New York society. At the 14 she was sent to a select boarding school and remained there, leading a quiet, studious life until she was presented to New York society and had been given by her parents in 1892. Since her mother's death she has seldom appeared in society.

RESCUED HER BABY.

A Mother's Wonderful Self Control Saves the Life of Her Little Girl.

A little child rescued in a drowning condition from the bottom of a deep well by her mother is the incident that excited the residents of Green Lake last week. The three children of John L. Sandell, who lives in a comfortable home three-quarters of a mile east of the lake, were playing in the yard a week ago yesterday. All were girls, two of them 6 and 8 years old respectively, and the youngest a little tot not quite 2. Near the house is an 18 foot well, with water in it two feet deep, the entrance to which was surrounded by a frail picket fence. The children in their play pulled and tugged at this railing until finally it gave way, and before the older girls could comprehend what had happened their little sister, going too far, had fallen into the well and was struggling on the black surface of the water 16 feet below.

AN ELECTRICAL PROCESS.

A New Plan for Working Rebellious Ores to be Introduced in the West.

George D. Burton, of New York, thus describes a new process for working rebellious ores, which he intends to introduce in the West: "The ore is placed in a receptacle of about half a bushel capacity, made to stand an estimated heat of 10,000 degrees, which is a greater heat than can be measured by any pyrometer now in use. The bottom of these receptacles are perforated with holes from one-half to one inch in diameter. Any number of such receptacles may be required. As the ore is heated the metal melts and drops in globules down through a solution coming up through the hole. The basis of this solution is water, with its gravity increased by adding such acids as borax, alum, cyanide or other acids. Different metals require different densities, depending on the amount of heat required to melt and cause them to leave the ore. The voltaic current could not be formed without increasing the gravity, neither would the metals leave the ore without some flux to make it run. "By increasing the voltage one metal after another can be removed separately. For instance, take a piece of ore containing silver, gold, copper and lead. With a low voltage and moderate amperage and by elevating the solution into contact through the holes, an arc is formed, and lead will be liquified and go down. Then by increasing the voltage and amperage silver will fall, and so with copper and gold, all fusing at different degrees of heat. "The works in Canada are for working the nickel, and there all the nickel in the ore is saved, while but about half by the old process. Aside from that, by this process and the use of condensing stacks, all sulphur, arsenic, and other volatile and valuable ingredients may be saved. In other words, everything of value, and all of it, is saved and preserved. It makes no difference how rebellious the ore may be—and this means a great deal when you consider how much valuable ore is not worked at all on account of the cost by the old process. As to the cost, there is a great advantage, and the electricity may be transmitted twenty miles to a mine from the source of power, thus saving the cost of hauling the ores."

RENEWAL OF YOUTH

SMALL BEGINNINGS

Make great endings sometimes. Ailments that we are apt to consider trivial often grow through neglect into atrocious maladies, dangerous in themselves and productive of others. It is the disregard of the earlier indications of ill health which leads to the establishment of all sorts of maladies on a chronic basis. Moreover, there are certain disorders incident to the system, such as malaria and rheumatism, which are always desirable to fortify the system after exposure to the conditions which produce them. Cold, damp and miasmata are surely counteracted by Hostetter's Stomach Bitters. After you have incurred risk from these influences, a wise course is to take Hostetter's Stomach Bitters directly afterward should be swallowed. For malaria, dyspepsia, liver complaint, biliousness and bladder trouble, nervousness and debility it is the most decidedly popular of remedies and prevents a widespread before meals promotes appetite. "What has become of your fine diamonds? They're still in the family, I hope?" "Oh, yes; my uncle has them."

By local applications, as they cannot reach the diseased portion of the ear. There is only one way to cure Deafness, and that is by constitutional remedies. Deafness is caused by an inflamed condition of the mucous lining of the Eustachian Tube. When this tube gets inflamed you have a running sound or imperfect hearing, and the patches produce thick, cold, damp and miasmata, and unless the inflammation can be taken out and this tube restored to its normal condition, hearing will be destroyed forever. Deafness (caused by catarrh) that cannot be cured by Hall's Catarrh Cure. Send for circulars, free.
