A properly conducted printing office is as much a secret society as is a Masonic Lodge. The printers are not under an oath of secreey, but always feel themselves as in honer bound to keep secrets, as though they had been put through triple oaths.

Any employe in a printing office who willingly disregards this rule in regard to printing office secrets would not only be scorned by the brethren of the craft, but would lose his posi-tion in the office at once. We make this statement because it sometimes happens that a communication appears in a newspaper under an assum-ed signature, which excites comment, and various parties try to find out who is the author. Let all be saved the trouble of questioning the emoffice. They are "knownothing" on It will knit every possible variety of plain and fancy such points as these. On such matters they "have eyes and ears, but no mouth" and if they fail to observe this rule, let them be put down as dishenorable members of the craft

Mr. Greenbury Fort, of Illinois has at last ceased to think of "crippled Union soldiers" long enough to pre-pare a bill to regulate the slaughter of buffaloes, and his proposition is a very good one, provided it can be carried out. The bill prescribes a fine of \$100 for each female buffalo killed "by any person who is not an Indian" within any Territory, and a similar fine for every male buffalo killed over and above the number necesary to supply the actual want for meat. It would be interes.ing to know, remarks the Louisville Courier Journal, how Mr. Fort proposes to detect offenders on the vast Buffalo ranges of the west.

Mrs. Harriet Westerfelt, of Bloomingdale, N. J., was put into a coffifor burial last week, her friends imagining that she was dead. The undertaker was about screwing down the lid, when the supposed corpse jumped up and said in a loud voice, "My God what are you doing with me?" She was removed from the coffin and placed in bed when she soon after ex-

IN range of work this Machine cannot be

IN range of work this Machine cannot be equaled. Will work equally well on thick or thin goods, from gauze to heariest heaver coatings, or even leather, without change f needle, tension, or thread. We will warrant them to do this. Our fine work is equal to any, and our heavy work excels that of any other Machine in the world.

This Machine makes the celebrated Lock-stitch—the stitch invented by Mr. Howe—alike on both sides. The tensions are positive for both upper and lower thread. The shuttle tension is upon the thread as it leaves the shuttle and not the bobbin, as in most Machines, and this tension is invariable, whether the hobbin be full or nearly empty. It is obtained by turning a screw in the shuttle, and can be changed in a moment, without taking out the work, breaking the thread, or threading through hales.

What we claim, in substance, is, that this is an honest Machine, and, if put in your family will do any and all of your work perfectly, will last a lifetime is a willing and ready servant, and is not subject to FITS.
