As easily drown a fish in the sea, Or quench your thirst with the sait of it, As quell by drink one's inisery. Do you think that helps it? Not a bit.

Suppose you a piece of wormwood drop
In a bowl - you may drink till your sensor go,
Your grief doats always at the top,
As hitter as ever. Drowned 7 Oh, no.

Drown sorrow in drink? If a man were hurt, And groaned at the pain of a wound received, Would you knock him senseless and essert That his wound was healed and his pain relieved:

I tell you, sir -I have tried this thing -Though you dull your grief by a wilful thirst, You wake to a sevenfold suffering. And the second state is worse than the first.

If a man has a man's heart in his breast, He will live his life and let drink alone; When the trial comes, he will stand the test. Drown sorrow in drink? It can't be done. The St. Lawrence.

A gigantic scheme of harbor improvements, costing about 87,000,000, has just been launched in Canada, and if carried out, even in a modified form, will make Montreal one of the finest harbors on the continent. The plan originated with, and was submitted to the Board of Trade by James Shearer, who is a practical mechanic and a leading manufacturer of standing in the city. Mr. Shearer's plan is to divert the current of the St. Lawrence opposite the city into the channels by tween St. Helen's Island and the southern shore, and this he proposes to do by having various obstructions re-moved from the channel, and running a dam or "peninsula," as he calls it, from Point St. Charles in the west end of the city to St. Helen's Island, midway in the

river, thus stopping the current from

running in the present main channel, be-tween the city and St. Helen's Island. The practical advantage that will accrue to the city and harbor from the carrying out of this project are several. In the first place the dam will prevent the shoving of ice opposite the city and the consequent flooding of the Griffintown district, which is annually very destructive to property, and will make of this a still water harbor, where vessels may lie during the winter. It is estimated that the construction of the dam, which would be 2,700 feet long and 900 feet broad, would raise the water two feet in the river and lower it ten feet in the harbor. This would give a head of twenty-five feet for mills, elevators and factories, and the transportation of freight. The dam would afford a broadway across the river upon the construction of a bridge from St. Helen's Island to St. Lambert, thus removing the necessity of a tunnel. This could be utilized for a railway, a road for carriages and foot passengers. These are the main results anticipated the south channel.

The scheme has been indorsed by eminent engineers, Mr. Kennedy, the harbor engineer, being one of them, as per-fectly practicable. Mr. Thos. Cramp, one of our ablest public men, and interested in the port as one of the greatest steamboat agents in the city, said at the secure at once several important objects, such as a new railway crossing and roadway between both sides of the river, without interferring with navigation, improving and enlarging the harbor proper, while rendering its access more easy, providing safe wintering space for ves sels, and thus increasing the length of our business season, creating large available warehouse sites with water power in convenient position. City Engineer Ansley says the scheme is practicable if the southside is sufficiently dredged to allow the full force of the water to pass through. The originator has presented his plans to the city and does not ask or expect any reward for his labors. Plans by eminent American and English engineers, some years ago, cost the city thousands of dollars, and were subsequently found to be impracticable. It will be strange if a simple and unlettered mechanic can solve the difficulty. -[Montreal Dispatch.

The Fury of the Great Lake Gale.

Do you know what it is to be at sea with a gale blowing eighty miles an hour? You may read of the wrecks which to-day strew the shores of every lake; you may read of the rigid bodies cast up on the sands, you may cast your eyes over a hulk and spar and battered plank, but yet you cannot realize the fury of that awful gale on Saturday. Vessels on Lake Michigan were bowling along before a topsail breeze, when, almost in a moment, the gale came bowling down from another quarter, bringing a terrible sea with it. Sails were split into ribgons before a rope could be loosened, and masts went overboard like broken sticks. No man living ever saw such waves on our lakes before. In an hour after the gale set in they were running twenty-five feet high. In three hours they could go no higher. off Frankfort they were fully forty feet high, and they ran with the speed of a rate

The gale caught them as they reared up, and tons of foamy water were broken off and hurled down into the trough, to mingle with the base of the next wave. One of the largest propellers on the lakes, standing twenty feet out of the water, had to put about before the gale was an hour old, and even while running before it at full speed, the waves swept over the entire decks. Seamanship availed but little. Schooners were al lung ahead, and the biggest barks were

nocked about like chips. When day broke Saturday morning those out at sea must have realized the wrath of death. Every plunge of an ordinary schooner rolled floods of water her decks to pour from the scuppers as she climbed at an angle of forty-five degrees. Men had all they could do to save life without moving a finger toward navigating their crafts. The loudest shout could not be heard two feet away, and the roar of the sea was awful to hear.
The passengers on the Alpena were reused from sleep when the gale reached her. It brought such a sea that no one could have slept longer. When the four score souls aboard were told that death was near, they looked out on that howl-

ing, rearing, hungry sea without a shadow of hope that one of them would ever see land again. Rafts and boats would have been blown about like feathers. Life preservers buoyed up corpses until they were cast ashore to be identified. These who put them on the final grasp for life could not have lived an hour in the keen wind and icy water.

an hour in the keen wind and icy water. Men who lived out the gale still speak of it with terror. Only once again will the door of death open wider to them. Spars and hulks are beating to splinters on the rocky shores, and beaten and disfigured corpses are thrown upon the sandy beach, to be wept over and buried. It was the wrath of death turned loose upon wild wastes, and that a single vessel escaped destruction seems almost a

The Grain Crops of the World.

The annual volume on the crops of the various corn growing countries of the world has just been issued by Mons. Bruy Estiene, of Marseilles, and the reports it contains occupy several hundred large quarto pages. A map showing in various colors the state of the wheat crop in the different departments of France is also given. Of the whole of the cereal crops of France the reports are good. The wheat crop is in five departments very good, in seventeen departments good, in twenty-six departments fairly good (assez bonne), in sixteen departments medium, and in six departments only, bad. Oats are very good in twenty-eight departments, good in forty departments, fairly good in seven departments, bad in two departments and very bad in one department. The maize crop, grown chiefly in the southern departments, is fairly good. In three departments it is very good, in nineteen good, in five fairly good, in five medium, and in one only, bad. Rye is reported as very good in eleven departments, good in fifty-three departments, fairly good in six departments and medium in three departments. Barley is the best crop of the year in France. In twenty-six departments it is very good, in forty good, in five fairly good, and in three medium. five fairly good, and in three medium. In no department is either the rye or barley crop declared to be bad. So far as other countries are concerned, with the exception of Russia, the reports are generally favorable. In Upper Italy the crops are reported as yielding 30 per cent. over average, and these are followed by Podolia and Swabia with an over average production of twenty per cent. In the south of Italy and Bavaria and in Wurtemburg the estimates are of crops 15 temburg the estimates are of crops 15 per cent. over average, while in Bessarabia they are 10 per cent. over. The crops of the year are 5 per cent. over average in Hungary, Poland, Belgium and the United States of America. Average crops, without either surplus or deficit, have been grown in Prussia, the Palatinate Badan Switzerland, Den from the carrying out of the project. The proposed peninsula or dam would start at the abutment of Victoria bridge and would be joined to the western end of St. Helen's Island. It could be made with the stone and dredgings taken out the south channel. is put down at 20 per cent., and in Gothland, another Russian province, at 20 per cent. under average. In Central Russia the crops are so bad that the deficit is estimated at 40 per cent. below average. The commercial summary which accompanies the report shows that Europe will largely depend for much of meeting of the board that the plan would her breadstuffs from America, and that there is every prospect of fairly good and remunerative prices being obtained for cereals this year .- [London Stand-

THE LADIES EMPORIUM AND LACE HOUSE.

A Visit to the Magnificent Establishment of John B. Garrison & Co.

Enterprising business men are not slow to take adantage of the rapid increase in wealth and population of Portland and the state at large, but meet the demand by careful and adequate supply. The truth of this assertion will not be doubted after an inspec-tion of the establishment of JOHN B. GARRISON & CO.,

No. 167 Third street, between Morrison and Yambill streets, Portland, Oregon. This enterprising arm, with a view to thoroughness and permanence, has leased the building 25xxx feet at the above location for a term of years, and has spared neither expense nor labor in rating it up for the purpose of their extensive business. At the left of the entrance is the LADIES' EMPORIUM,

Ladies' emponius.

Under the direct care of Mrs. M. A. Winnie. Here we find an elegant variety of gulpure, tortion, Spanish thantilly, Russian, Vasencennes, English, thread, Dutchess and point laces, and other varieties, with their delicate tracery and claborate design; imitation laces in large variety; a line of fine embroideries, one of the specialities of the establishment, edgings and insertions to maich, in various widths; embroidery siles, white and in all the new colors and tints; trimming satins in the latest shades; ruchings of various grades; coral, jet, steel and ivery ornaments, and an endless variety of articles found only in a first class house. Among the specialties we note what has never been brought to this city before—a dainty article of linen and silk muits, handkerchiefs of the tinest linen, plain and embroidered, and ladies' flannel underwear, white and in colors, embroidered in silk. The show case in the center contains an elegant variety of the most rare lisees artistically arranged over satin of various colors. A few feet from this is displayed an elegant white suit of Louislaie cambric and tortion lace, male in the house.

On the right of the entrance is a full display of the ROYAL ST. JOHN, THE NEW WILDON

BOYAL ST. JOHN, THE NEW WILSON

BOYAL ST. JOHN, THE NEW WILDON
And other sewing machines. This portion of the
establishment is under the charge of John B. Garrison, and belonging to it is a large array of thread,
needles, thimbles, machine oil and sewing machine
fixtures, and needles for all machines in use in this
section of the country. Mr. Garrison is prepared to
repair sewing machines of all kinds, on the most
reasonable terms, having employed Mr. Desmoud,
lately with the Howe, who is a machine adjuster and
repairer of fifteen years' experience, and who will
warrant all work. Passing on to the

MANUFACTURING DEPARTMENT We find to the right of the hall a room elegantly fitted up for a ladies' reception room. Noticeable
upon the wall of this room is a fine of painting,
"Sunny Hours," by Rosance; the apartment is provided with mirror, lounge, chairs, etc., all of which is
stylish and appropriate. To the left of the hall is the
cutting room, with appliances for that work, and beyondthat is the sewing room, 12,30 feet, siry and well
lighted for the business of the seamstress. This
room is under the management of Miss Jennie
Brown, lately of Edinburgh. A patent platiting machine, with a capacity of 1000 yards per day, is one
of the appliances of this room. This firm proposes
to demonstrate the fact that ladies' underwear,
plain or elaborately trimmed, can be made at home
at prices as reasonable as those paid for the same articles imported so largely from the east, and at the
same time furnish straig employment and reasonable wages to a large class of working women and
dirfs. The principles upon which this establishment is founded are carefully considered and based
upon the necessity for such an institution, and the
elaborate care displayed in fitting it up, shows that
it has come to stay. The members of the firm give
courteous attention to the wants of their patrons,
and will promptly and carefully fill orders from the
country. An inspection of the goods offered is cordially invited. We find to the right of the hall a room elegantly fit-

Gen. Meredith Read, ex-Minister to Greece, mentions an old man who recently died in Athens, aged 112. A son was born to him at the age of 92. The young man is of ordinary size and strength, but is entirely destitute of

ALBIA, IOWA, May 26, 1830.

To Whom it May Covern:

I take a great piessure in making the following statement: I have been silloited with a disease of the kidneys for the past two years and have tried numerous remedies with only parial and temporary relief. Warner's Safe Kidney and Liver Cure was recommended to me, and after taking it the pain and distress left me, and I am to-day feeling strong and well. I am perfectly satisfied that Warner's Safe Kidney Cure is the medicine needed, and can cheerfully recommend it to others.
