Comets.

It seems that this year we are to have an unusual display in the way of cornets, if we can place any faith in the predictions of our Eastern scientists and astronomers. They say that another wonder of the skies bids fair to colminate in August. Before the from pulling back any while his stomach The heavy mins for the past few'days have consor appears, starting from the same point in the heavens, and traveling in the same di-Late grain is pretty badly rusted, but to rection. It was not full fledged to begin with, like its predecessor, but was discovered as a tiny telescopic object, with plenty of room to grow. It is fast taking on larger propertions, is now visible to the usked eye nd has already developed a forked 'rail, and is rushing headlong toward the earth, with a prospect of being marvelous to behold as it circles around the north star in its transi tory visit to the realms of the sun. Astronuners have another tidbit with which to diversify the studion of the summer nights. Not one of them forefold the celestial visitor not one of them can tell whether one train or half a dozen will form its gossamer cosume; not one of them can prophecy the size it will attain when reaching perihelion. It is 110. the delightful encertainty of comets that forms their chief charm, for there is little probability that the observers of the present | menight the president's condition is not eas generation will settle with any degree of
