AN INVENTED DOG.

A Species of Hound With Which the Germans Hunt Badgers. The dachshund, as his name implies, is a badger-hound, invented by the Germans; and he looks it all over. All the science and patience of the German character is made manifest in him. Given the badger, required a hound to hunt him, and the proposition is worked out in his person like a problem in Eu- ter, and apparently undisturbed by the elld. Badger-hunting is not a sport constant chatter about them. After much followed in England, and the dark they become very active and consequence is the poor harmless badger is everywhere ruthlessly destroyed, in accordance with the wretched custom to call everything vermin which is not game, and extermi-nate it. But the habits of the badger have preserved him in some favored parts of the country, where he is still by no means a rare beast. He is a great digger, and he makes for himself a very large deep earth, in which he re-sides by day, betaking himself to the outer world by night. Badger-hunting, therefore, should be carried on by moonlight. The badger is found roaming abroad, is run to his earth, and is then "taken out," which, perhaps, may account for the pastime not being favored by the English gentlemen who live at home at ease. The dachshund is well designed for this work, and he has his points by which he is to be judged, like his great neighbor, the foxhound. There are two sorts of dachshunds, distinguished chiefly by their color. The one is black and tan. and should be strictly black and tan and nothing else. The other is a lightcolored red, and should be also nothing else; his nose should be red, and his eyes should be a light hazel matching the red. The red dachshund is smaller, as a rule, than the black and tan hound, but in other respects he is much the same, color excepted. His nose should be long, his head long, his ears long, his back long, and his stern long, all on very short legs, so that he has altogether a very lengthy appearance. He should measure about eleven inches in height, he should be very muscular and powerful, with very strong back and limbs. His breast-bone and arm have a very peculiar formation, designed for digging mals. in pursuit of the badger in his earth. His arm should have a particular curve, giving the fore foot a turn outward. which from the foxhound point of view is anything but "straight," as he should be. But the dachshund's foot is a most important point, as it is to every animal according to the old maxims-no foot no horse, no foot no hound, no foot no sheep. The dachshund's fore foot is a large foot, well webbed, as he is a good swimmer, and turned out in correspondence with the curve of his blue eye. This one is deaf, and it has arm, that he may throw the earth away from him in digging. As this is a very inconvenient foot for anything but digging, it is all the more important that it should be a very good strong one, to resist wear and tear. The fore foot of the dachshund, therefore, which would be condemned by the ordinary sportsman as a very ugly thing, is a point of great importance, and should be well looked to. It should be large, round, strong and compact, on a properly ourved arm, an accurate idea of which the study of the animal alone can give. The dachshund should have a very good nose, and he should run his game like

constant, so clever, so fond of amusement, so amiable, and so flattering to in South Siberia, and bear the same man by preferring him to other beasts, even to dogs, that no wonder he is such a special favorite, notwithstand- constitution, and are not prolific.—San ing his unorthodox shape as a hound. In the matter of dogs there is no accounting for shapes; they positively astonishing. general observer, walking through London, no form whatever in the person of a dog, however compli-cated and outlandish, as long as it occupied space of three dimensions, ought to astonish him. The expression of the emotions in a dachshund, the sweet, loving look from his eyes, the response of his stern to every fleeting joy, and the wisdom manifested in head, would reconcile the most asthetic man or woman to any shape he might assume. - Saturday Review.

-When both parents have eyes of the the children follow their parents in this feature, and of the twelve per cent. born with eyes other than the parental translated, reads: "We will color a part must be attributed to in-termittent heredity. More females than males have black or brown eyes in the proportion of forty-nine to forty-With different-colored eyes in the two parents fifty-three per cent. of the children follow their fathers in being dark eyed, and sixty per cent follow their mothers in being dark eyed.— Boston Budget.

ANGORA CATS.

Several of the Rare Animals to Be Found in San Francisco.

In the hair store under the Baldwin hotel there can be seen at almost any time two large snow-white cats, especially noticeable on account of their long silken hair. During the day they are usually found drowsing in two pronfancy work-baskets placed on the counfrisky. The general expression of their faces is much kindlier than that of the ordinary feline, and they are the object of much attention and petting from customers. Inquiry as to their breed elicited the information that they were imported from Angora, a city of Turkey in Asia, well known on account of the long silken hair of the famous gora goat, which is one of its products. The cats are prized for ornamental purposes, they evidently have a commercial as catskins are found enumerated among the exports. They are very expensive, scarce and and comparatively few have found their way to this country. The first two seen by the reporter weigh about fifteen pounds each, but their bushy growth of hair gives them the cratic. appearance of being much larger in size than ordinary cats. In the daytime their eyes are of a pure amber color covering the entire ball of the eye, the pupil being contracted to the minutest black speck in the center. At night the pupil dilates until there is only an occasional rim of yellow to be seen. The ears, nose and toes have a pinkish hue. The most conspicuous and attractive feature is the silken hair, which is about an inch or two long. It is especially thick and prominent about the tail and neck, the former exceptionally long and bushy, while the latter might be readily imagined to be encircled with a series of Elizabethan rufcled with a series of Elizabethan ruf-fles of finest lace overlapping each oth-er. They were brought from abroad by a wealthy lady living on O'Farrell Company to recover on a promissory note. street, who appears to have a remarkable fancy and affection for these ani-

A visit to the residence was rewarded by the view of quite a family of them. There are four full grown and three kittens in the house, while at her country seat at Menlo Park she has five or ix more. The animals show the same the same. general characteristics, but vary in the color of the hair and eyes. Most of them are white, but others are spotted, and one is entirely black. One of them has the clearest of Saxon blue eyes, while another has one amber and one been discovered that where this peculiar yellowish blue eye occurs, the Angora cats suffer from this affliction. The lady has had many kittens imported, but they are exceedingly difficult to raise, and require as much care and attention as is usually devoted to human babies. They demand not only certain kinds of food, but are very regular in their habits, and only eat at proper meal times. Their food consists mostly of mush and milk, very little meat and that entirely devoid of fat. They eat grass and are particularly fond of catnip and most kinds a hound, not like a dog, using his tongue freely on the line of scent, and running up well to cry. His tongue is not musical, like that of the foxbound fulness only equaled by that of a dog. Nothing but aggravating and continue Slow in pursuit, but matched in mouth like bells,
Each under each. A cry more tunable
