The many species that men consame giving them a great variety of flavor and many degrees of nourishment. In some parts of the earth fish form the chief sustenance of the people. In the frigid zone, fish are dried, ground to powder, and converted into a substitute for bread. Even putrid fish forms the ordinary food of whole tribes of men. From the earliest period of mankind, fish has been their common nourish-

The flesh of fish is less nutritious than meat, and differs in the amount of plastic and fatty matter they contain. But generally we may say that they contain seventy-five per cent. of water, fifteen per cent. of nitrogenous materials. The white fish, however, contains only three per cent. of fat an i eighteen of plastic matter. Some are not easily digested in the human stomach. Others dissolve readily, and enter and mingle easily in the circula-tion of the blood. It may be well for the mother to know that some fish are poisonous at certain seasons of the year. and under the influence of certain kinds of food, especially in hot and unhealthy climates. They should not forget that various articles of ordinary diet vary in their influence upon the health and comfort of different children. Some can not safely eat veal, or mutton, milk nor strawberries. Shell fish (as lobster) may induce cholera; in others a special form of nettle rash may appear; and in still others, nervous maladies may seemingly be caused by eating certain kinds of fish. Such eases are very rare. and have been ascribed to the food on which some fishes live, and to the idiosyncrasy of persons so affected.

If fish do not yield as much nourish-ment as meat, still those who live chiefly on this diet usually maintain a healthy state of body, and discharge well the usual duties of active life. Fisheating children ultimately make healthy and active men and women.

We may find it convenient to form two grades of fishes, namely, those that have white flesh and those that have red. The former have a looser texture than the latter, and so are more easily digested. Among the white-fleshed fish are the perch, haddock, sole, cod, etc. Their bodies usually contain but a small amount of fat, such as usually accumulates in the codfish and its relatives, whose livers are ordinarily distended with oil. White-colored fish, on an average, contain nearly eighteen per cent. of plastic matter, seventy-eight per cent. of water and four per cent., or iess, of fat.

The red-fleshed fishes, as the mackerel, herring, eels, salmon, etc., are distinguished by having fat mingled with the flesh, especially in the part below the belly. So the members of this second class are richer, more nutritious, but less easy of digestion. The salmon, that prince of fishes, approaches meat in color, and yields more nourishment than any other member of the finny The fat is mingled with the fibers of the muscles, and also exists in layers directly beneath the skin. In most fishes, the fat abounds in the belly part more than in the back, so that the former are not so suitable for children and weak stomachs.

The red fleshed fishes are more nutritious, but harder of digestion than the lean and white-meated ones. This class, cooked without much fat. are easily digested and assimilated in the weakest stomach and are partienlarly suitable as good for children.

The payor of fish depends in part upon the species to which they belong, and partly upon the food they eat and the place in which they live. Those that live in deep or quickly moving waters with gravelly bottoms are sweeter and more delicate than those that spend their days in shallow, slowly moving waters on muddy bottoms. The latter are not only less nutritious but tougher, harder to digest and have an earthy flavor. We ought to repeat that the fatty class of fishes require more digestive force than the lean, and so are not proper for young children. But they may be made more digestible by adding to them when cooking a little vinegar. All fish should be beheaded and cleaned as soon as caught .- C. H. Allen, in Western Rural.

"HUMBLE THOUGH I AM." The Professional Friend of Labor and the Politician.

Theodore Roosevelt, who is a straightforward and incisive writer, tells a story which I know to be a fact, and tells it remarkably well. It is at the expense of a prominent politician who shall be namcless. The prominent pol-itician was chairman of an Assembly committee. It gave a hearing to a friend of labor by profession who earned his bread by the sweat of his jaw. talked work for a living. The friend of labor by profession found the prominent politician in a high condition both of animal and ardent spirits.

This was shown when, while addressing the chair, the friend of labor by protession said: "Humble though I

Whereupon the Chairman, with great dignity and firmness, promptly interrupted him by saying:

Stop, sir; I want to ask you a question or two. Did you say 'Humble though I am?"

The man amazedly admitted that he did. "Are you not an American citizen,

sir" The man was constrained to say he

"Well, then, sir," thundered the aroused chairman, "never say you are humble. An American citizen bas no

right to be humble. He is the equal of any prince or potentate on earth. Never again call yourself humble in ...ie presence of this committee." The man was so depressed that he

with difficulty resumed his speech, until he found that the happy and emphatic chairman had fallen asleep in his chair .- "Insider," in Brooklyn Eagle.

-Lady Anne Lindsay, the author of "Auld Robin Gray," wrote the ballad when she was twenty-one years old, but did not acknowledge the authorship until half a century later.

HOME AND FARM.

-When a horse refuses to eat he should be allowed to rest. It will injure h m to do any labor ous task.

-An old picture frame may be brought into service by covering it with velveteen of any rich shade, with a mat of Madras drawn full over pasteboard. -Indiana State Journal.

-Sweet Cream Cookies: One cup of sweet cream, two cups of sugar, two eggs, three pints of sifted flour, three teaspoonfuls of baking powder sifted with the flour, and a little sait flavor to taste. - The tiousehold.

-Cheese Turnovers: Make an ordinary crust with dripping, cut some cheese in thin slices, place it on the crust, which has been rolled in thin layers, add a little mustard, pepper. and salt, and a few drops of vinegar or Worcester sauce. Fold the orust, and bake in a quick oven. - Boston Budget.

-There is considerable manurial value in the scattered oats and barley plowed under on land intended for wheat. But it should be plowed early so as to be destroyed before the time for wheat sowing. To sprout this grain and thus insure its destruction is one of the advantages of moist weather following harvest .- N. Y. Herald.

-A three or at most four years' course in cropping land is better than taking a longer time to it. This is assuming that one year of this time the land will be seeded to clover. With a little smaller area in grain or hoed crops the grain, from increased fer-tility, will make the farmer more clear profit than from cultivating more acres so poorly that the land will constantly be growing poorer. - N. Y. Tribune.

-G nger Cake: One cup of molasses, one cup of boiling water. in which one-half teaspoontul of soda is dissolved the velk of one egg, and a piece of butter the size of an egg. Stir flour into the molasses until as stiff as you can stir it. then add onehalf terspoonful of croves, one teaspoonful of allspice, one teaspoonful of ginger, and one teaspoonful of cinnamon. To be baked in layers and put together with icing.—Exchange.

At Richmon bee was accident.

-All the wooden parts of every tool and implement, especially if liable to exposure to the weather, should be well oiled with crude petroleum, applying enough to thoroughly penetrate the pores. Such tools will last much longer for this treatment, and such parts as hoe-handles or whatever is used in the hands, will be smoother to the grasp. Painting these portions. which are not subjected to wearing is useful, but not equal to oiling with petroleum, or half so cheap. - Chicago

Tribune. -Where t mothy seed is sown with wheat or ree in the fall the grass seeding should be two weeks to a month later in order that t may not get a sufficient growth to injure the grain. Where wheat has been put in with a drill and phosphated it is a good plan to harrow just before sowing the grass seed. This makes a fresh surface for the seed to fall on and, besides, pre vents the bulk of the grass seed from falling into the drill furrows, where they will crowd and be crowded by the grain.-Practic Farmer.

-Peach jelly: Make a thin syrup with ten onnces of sugar and a hal p nt of water. Then take ten or twelvripe peaches, pare them. out them in halves and take out the stones, bruising the kernels of half of them. Now put the halved peaches, together with the bruised kernels, into the syrup and allow them to simmer for fifteen m nutes adding, for flavor, the zest of two lemons and the juice of three. The strain the jelly through a jelly bag add two ounces of dissolved gelatine and cour it into a mould, which sho ld be placed on the ice until the jelly tecomes stif enough to turn out. peaches themselves may be utilized as a compote. - The Caterer.

APRONS AND BIBS.

Old-Fashioned Articles Which Promise to Be Stylish Once More.

Aprons are beginning to be worn aga n. Among a few novelties are some made of cheese cloth; a yard is sufficent, with a strip cut off for the belt: the hem should be five inches deep, and there should be a band either of silk embroidered lace or cro a sitch above a bow of ribbons to match. placed at the s de. The new canvascloth is utilized for sprons by draw ng some threads in three stripes down the center and threading ribbon through the perpend cular lines. The ord nary cotton canvas is also employed, made with broad box-plaits and rows of satin r bbon between the plats. A novel feature in this season's aprons is that they form a part and parcel of the large square collar attached to them making a most important dress tr m-The b bs often are mere half handkerehiefs. coming from the shoulder and crossing in front. The bands round the wast in-crease the width. A pretty kind of apron is made with seven rows of eern lace, finished with two perpendicular rows on each side, laid over a color and ornamented with butterfly bows; the bibs are made in the same fashion. The pink and white and blue and white crepe cloth has been utilized in the same way. It is made with a series of tucks and a Swiss bodice of pink or blue velvet with braces with a plasted side. This has a most dressy appearance for bacars. Valenciennes s: lace that with English people is always in fashion and it has been liberally applied to aprons this season. Some new ones were composed of alternate rows of work and lace, forming a point in the front, and have very wide wast-bands and no bibs. Ecru lace is also used a great deal in plaits, with diagonal bands of insertion between and with three flounces at the edge and perpend cular box-plaits above. Gauze ribbon is used in preference to any other. A novel make for a bib is two p eces plaited at the side and caugat together with four looped bows. Pink silk and plush aprons are new and stylish. Bric-a-brae dusters make
