PACIFIC COAST NOTES. MISCELLANEOUS ITEMS THE AGRICULTURALIST EUGENE CITY GUARD.

L L CAMPBELL, . . Proprietor.

EUGENE CITY, OREGON.

MINERS OF SCOTLAND. Clergymen and Doctors Who Began Life as Colliery Hands.

In Scotland there are three distinct types of men among the miners. There is the Scottish miner pure and simple, then there is the Scoto-Irish miner, and lastly the miner who is altogether an Irishman. The first of these is unquestionably not only the best miner, but also the best man of the three; he has in most cases an education quite equal to that of a skilled artisan; he reads much, he thinks much, and has opinions of his own concerning himself and other people, which he is in no way slow to give expression to. The colliers of this stamp are for the most part sober, steady and thrifty; not infrequently they own the houses they live in, and they never put any more of their sons than they can help to their own calling. The eldest boy, as a rule, must go down the pit, and it is an even chance with the second that he shall do so, too; but after that the lads are almost sure to be sent to work that is 'above ground,' as it is phrased. It frequently happens that lads of this class work in the pits till they are young men, and then take bany, Or. measures to give up the calling of a collier. I know clorgymen and doctors of medicine who, when young men, Obispo county. were colliers, and found the means for their education by working in the plts during the summer months while they attended the University of Edinburgh or Glasgow in the winter ones. This of course meant the cultivation of learning on a little oatmeal, but young fellows such as I am referring to did not think much of that. From their boyhood up they had been accustomed to do a big darg on a spare diet, and cheerfully toiled away alternately with the pen and the pick until they their hearts. Many a pinch, too, the old folks at home made to give "the ind-beet sugar factory at Watsonville for The owners of the released dies" a help in their time of struggle, and felt far more than repaid for all their self-denial when they saw John "wag his pow in a pu'pit," or found Sandy with a brass plate on his door

with the letters M. D. after his name. Those, however, who aim at divinity and medicine are necessarily a small minority; the bulk of the youngsters who do not go into the pits, or go into them and afterward leave them, take to the ordinary callings of a country district and become blacksmiths, carpenters, tailors and shoemakers, or join the ranks of the various shopkeeping occupations. Most of the offleers about a colliery come from the same class, the overseers and the roadsmen under ground, the engine-keepers and the pithead staff above ground, being almost to a man Scotch colliers or the sons of such .- Ninetcenth Cent-WTY.

MARK TWAIN'S DAUGHTER.

She Kept a Diary Until She Suspected Her Father of a Mean Trick. Mark Twain, if he is in the mood, will tell the story of his own courtship in a manner worthy of the greatest of living humorists. When he first met the lady who afterward became his wife he was not so distinguished as now, his origin was humble, and for some years of his life he had been a pilot on the Mississippi river. The future Mrs. Clemens was a woman of position and fortune; her father was a judge, and, doubtless, expected "family," and social importance in his sonin-law. Clemens, however, became interested in his daughter, and after a while proposed, but was rejected.

In this way usually better prices are maintained, as there are no middlemen to get their share, and there is also the advantage of dealing with people whose standing is fairly known, Two thousand people witnessed a But even if lower prices must be taken game of base-ball at Philadelphia last as a rule it is better to sell near home a distance.

> The value of the food is not in the only, but also in the amount and quality of manure derived therefrom. It has been estimated that one-third of the food eaten goes into the manure. As the manure, then, is simply the food stored away for future use, it is important that in order to drive the greatest benefit from the food manure should be carefully managed to prevent loss. As the food is not exposed to injury by air and water the manure is equally deserving of care. The manure-heap is the savings bank of

If it is desired to have poppies very early, it is well to take "time by the forelock" and prepare the bed in the fall. Sprinkle the seed on the top of barrel of new. The cider that has the ground just before winter fairly been doctored to keep it sweet is hard sets in, or it can be done later. The finest poppies I have ever grown were sown during a January thaw, while the bed was free from snow for a day or two. Poppy seeds are very tiny, an ! if planted too deep will not come dry up, but the rains and the melting snow seem to regulate the matter nicely. Use as little seed as your con-

pears require a consideraste amount of phosphate in addition. There is, perhaps, no place on the farm where a good dressing of manure would de greater good than in an old apple orchard where the trees seem to be running out.

Much of the feeding of chickens is of soft food. It is easily picked by ing when the owner of swine saves the little fellows, and they can quickly fill their crops from a dab of wet meal thrown on the ground before them. This too rapid eating is one of the worst evils in artificial feeding young A conference of wool-growers will his hogs. The possibilities of hog- worst evils in artificial feeding young rearing with the right kind of ensilage chickens. They gorge themselves, become surfeited and die. We have found whole wheat grains much better, beginning for two or three days by breaking the grain in two pieces. It does not matter, however, if the little fellow is forced to do this work himself. He will struggle with a grain of wheat or oat grain for two or three minutes, and at last, after a desperate struggle, swallow it. The very hardness of the whole grain keeps his food from compacting in his crop. We would not, however, feed whole

corns to very young chicks, nor in-deed corn ground into meal, as their principal diet. At present many country people

want to know how to make quickly vinegar out of cider. Apples vary in the amount of sugar they contain. Some that make thin and watery ciuer, or are largely diluted with water, will never make strong vinegar unless reinforced with more sweet. Any coarse sugar or molasses will do, as whatever impurities it contains must be thrown up to the surface in viclent fermentation, and may be skimmed

off. If the cider is all right, place it in a place, where some may be drawn off and poured back every day, taking pains to bring it into contact with the air as much as possible. For this purpose it is often filtered over coarse shavings or straw. The oxygen the air starts first the vinous or alcoholic fermentation, which is quickly followed by the acid fermentation. The more sweet there is in the cider the stronger the fermentation and the sharper the vinegar. If you have old cider that don't turn readily into vinegar, put it into an old molasses hogs-

head or barrel, and give it another trial. There are various methods of keeping cider from working. If your old cider has been subjected to any of

these, it is better to make or buy a to change into vinegar, and is not of the best when made. The common practice of putting the cider barrel in the coldest corner of the cellar, and then letting it work itself into vinegar without help, is not one to be gener-

A correspondent of the Country Gentleman writes from California how he saves and cures peaches in the sun. He says neaely all evaporators are abandoned and the rays of the sun should always be sown where they are depended on and answer as good a purpose as the best system of artificial heat. He goes on at length to say how the fruit is gathered, peaches being his cwn crop, that it is bleached by use of sulphur fumes half an hour, and the sun dries large fruit that is in halves in three days' time. California evidently has a great advantage in its warm sun and dry climate, but while they depend on the sun's rays only, they have not any decided advantnow in xogue in Oregon. They do all the work of preparation and laying ou trays, and while they place these trays in the sun the evaporating concerns hold them more conveniently and the cost of wood is small. The cost of handling is the same in either case. There was a short time last summer when sun drying was efficient, but not to be depended on. The sun in August can be utilized here in connection with evaporating by heat. Last summer when peach plums were threatening to spoil because there was not evaporating space to hold them, the expedient was resorted to of spreading the fruit cut and pitted upon boards and partially drying it thus. It was found to be an advantage, as the fruit partially sun-dried was even better than that put at first into the evaporator. If we have a good sun it can be utilized to dry fruit N. Y. Picayune. and it can be bleached as well before sun-drysng as when dried in an evap-

"Well," he said to the lady, "I didn't much believe you'd have me, but I thought I'd try."

After awhile he "tried" again with the same result, and then remarked, with his celebrated drawl: "I think a great deal more of you than if you'd pounds from September 15th to De-said 'Yes;' but it's hard to bear." A cember 1, 1888. The fish were taken third time he mot with better fortune and then came to the most difficult part of his task, to address the old gentleman.

"Judge," he said to the dignified millionaire, "have you seen any thing going on between Miss Lizzie and me?

"What? What?" exclaimed the judge, rather sharply, apparently not understanding the situation, yet doubtless getting a glimpse of it from the inquiry.

"Have you seen any thing going on between Miss Lizzie and me?

"No, no, indeed!" replied the magnate, sternly. "No, sir, I have not."

"Well! Look sharp and you will," said the author of "Innocents Abroad." and that's the way he asked the judicial luminary for his daughter's hand.

Mark has a child who inherits some of her father's brightness. She kept a diary at one time in which she noted the occurrences in the family, and, among other things, the sayings of her parents. On one page she wrote that father sometimes used stronger words when mother wasn't by and he thought "we" didn't hear. Mrs. Clemens found the diary and showed it to her husband, probably thinking the particular page worth his notice. After this ties it "runs in rivulets." -Clemens did and said several things that were intended to attract the child's attention, and found them duly noted afterward. But one day the following entry occurred:

The general was exe- finement of fowls they should be kept cuting an order of ejectment issued by as busy as possible by scattering their grain among leaves and chaff, so that hard scratching will be necessary on their part in order to get enough to eat. This will take their time and be liable to keep them out of mischief. As a further prevention, some trim the edges of the beaks, so that when they attempt to pull a feather it will slip through and they cannot hold it. Another remedy is to put on the fowl an appliance called the poultry bit, which can be obtained of almost any

> If any person were to chain an animal to a stake in a field and leave it to shift for itself, then to watch the animal until it gets thin and decrepid from loss of flesh and strength, it is quite probable that the humane society would be after him with properly deserved punishment. Yet this is what thousands of farmers are doing with their fruit orchards, of course barring the difference between the insatiate tree and living animal. Like the latter the tree is chained to one locality and cannot go abroad for food, but fortunately it has no sense of suffering, or at least none that we can appreciate. And yet even for a tree there must be something akin to pain in the process of slow starvation -the seeking by exhausted rootlets

an average of 3,800 pounds, earning \$5.70 per deducting \$1.50 for driver and his board, leaves \$4.20 for team, wagon and harness. This is a differ-

orator. In making calculations for any in- failures come first, the success vestment, it is always well to con- The unsatisfactory is generally soo sider both sides carefully-the probable cost and the probable returns the

investment will yield. If by one method of procedure it costs five guides us and the world; and to cents per pound, and the price of beef gives promise of fluctuating between 44 and 54 cents per pound, the investment is not a promising one. Again, if it costs \$100 to raise a common horse in a common way to the age of four years, and there is no promise of more than \$125 for him, while it costs \$125 to raise a fine draft colt to the age of three years, and such colts readily sell at \$175, it is not hard to see which investment gives the greatest promise of profit. In this question of relative profit, the Farmers' Advance gives the following interesting incident: A gas company having a quantity of pipe to be hauled some distance offered what they supposed fair rates by the hundred pounds for the work. Light teams, or what many call general-purpose teams, could draw an average of 2,200 pounds, earning \$3.30, which, after deducting \$1.50 per day for driver and his hoard, left \$1.80 for use of team, wagon and harness. Any one will say that the team would be fed at a loss. Parties having heavy teams of grade draft horses took the contract at the company's rates, and drew on

team.
