An Elevator Incident.

In one of the elevators in a down town building the other day an absent minded man came near departing this life with unbecoming haste. He had stood close by the door when the car stopped at his floor and had allowed two or three other passengers to brush by him. He had made no signs of a desire to step out, but when the elevator resumed its upward course and the door was nearly closed he gave a start and jumped forward until his body projected out of the car and prevented the door from closing. Luckily the conductor understood his business. With an instinctive movement he stopped the car in a few inches. Then he drew back the door and released the venturesome passenger, who walked away without even looking back or saying a word. The other passengers looked

on in silence. Even the elevator man had nothing to say for a minute, but when the next floor was reached the whole affair seemed to strike him in a new light. He didn't think of the horror of a life suddenly taken away, of the sickening sight of a crushed and mangied body. "That's what I call a mean man," quoth he with severity. "Want to have me sent to the Tombs, eh? Gad! A man like that

ought to get burt, he had."-A good file is now a part of a tramp's outfit. He finds it useful when there is a barbed wire fence between him and some-

FARM AND GARDEN

The Way to Make Fine Butter.

How to Relieve Asthma-Nice Way to Serve Stirred Eggs-Other Information.

A dairyman in the Southern Live-Stock fournal, who complained that he could not make butter of good flavor notwithstanding he fed liberally and of a well-constructed ration, "let the cat out of the bag" by stating that he kept his cream from two to three days after skimming and let the cream stand on the milk for twenty-four to thirty-six hours before skimming. His cream would be about eighty-four hours old from the cow, and unless he had it submerged in ice water a good portion of the time it would be well on the road to rottenness. How many thousand years, we wonder, is it going to take to teach people that to shorten the time from the milk pail to the package is the way to make fine

Cucumbers Not Noxious. Many people are under the impression that encumber is very indigestible, and when they eat it they do so under protest and with apprehensions of possible dire consequences. How this delusion can have arisen it is difficult to say, unless it be that cucumber is often eaten with salmon and other indigestible table friends. It is not the cucumber, however, but the salmon that sits so heavily upon our stomach's throne. Cucumber, in fact, is very digestible when it is eaten properly. It cannot, indeed, be otherwise when it is remembered that it consists mainly of water, and that those parts which are not water are almost exclusively cells of a very rapid growth. In eating cucumber it is well to cut into thin slices and to masticate them thoroughly. Even the vinegar and pepper that are so often added to it are of service to the digestion, if not taken in excess. The cucumber, as every one knows, be longs to the melon tribe, but in our somewhat cold country it does not grow to any very large size, and therefore is firmer and looks less digestible than its congener, the melon.

With an experience of over thirty ears in handling sheep, according to the books or accounts given, I do not know as I ever had a fully-developed case of foot rot, says a writer in the National Stockman. But, as I had sheep frequently lame, my view of the matter was all that was required to develop into proper time, so that I was always on the ookout; for a sheep to limp was enough to cause me to investigate and act.

With an average of about 200 head, there were times during warm, wet weather when matters would become a little serious, but I never sailed to come out on the winning side. I have made use of different remedies, some of which are kept and the pastures and stables become polluted, the case is somewhat difficult; but the greater vigilance re-quired, if attended to, will fully meet he exigencies of the case. It is a big job to handle a lot of heavy sheep, and where there is serious trouble arrangements may have to be made that the liquid can be put into a shallow tank and sheep driven through it, letting a given number remain in it a short time have never had any trouble with club feet caused by the use of vitriol, as claimed by some is a result of its use.

Of Interest to Housekeepers. Old napkins and old tablecloths make

the very best of glasscloth. Asthma may be greatly relieved by oaking blotting or tissue paper in strong saltpeter water; dry it, and then burn i in the sleeping room.

A nice way to serve stirred eggs is to heap them in the middle of a platter and garnish them all around with slim slices of smoked salmon, which have been dipped into melted butter and then allowed to frizzle slightly on a slow fire.

A rough test for the detection of water in lard consists in melting it in a test tube. If free from water it becomes perfectly clear, while the presence of water causes an opaque appearance. If present in large quantities it separates out on the liquid stands, but where the two have been well incorporated separation only occurs most slowly.

What to do with cool beefsteak-Chop the best and most tender portions; add hot water enough to moisten slightly; heat quickly and serve at once as soon as Add butter, salt and pepper. The tough parts of steak or of roast beef are much more palatable if boiled first in water to cover until tender. Then use them in any of the ways given for cold meat, as croquettes, hash, mince on toast, stew, ragout, meat and potato pie,

braised meat, etc. Despondency on the part of the patient is in many cases more deadly than dis ease, and whatever is said or done in or about the sick room should be with view to dispel that emotion and replace it with something more healthful not go tiptoeing and creening about the apartment ; do not stand behind a screen, curtain or door and peer wistfully at the invalid; do not stare fixedly at him from any point, and do not indulge in persistent questionings which are evidently annoying. If the patient invites con-versation and is able to endure it, talk freely of those matters in which he is interested, the current news of the day social events or reminiscences; but un der no circumstances permit such topics as sickness, death, suffering and others of like nature.

The Paris Chamber of Commerce strongly recommends manufacturers to exhibit goods at the World's Fair.

A railway, consisting of a chain formed of believe in divining rods—treasure finders moves along the bottom plate of the chain other end the m

SEEN ON A TRAIN.

Peculiar Phases of Life Noted by an Old Railroad Conductor.

"Yes," said an old conductor on one of our trunk lines recently, "we see all manifestations of human happiness and sorrow here in the course of a few months. Sometimes we carry a funeral party in one part of the train and a lot of roistering pleasure seekers on another. We become accustomed to such scenes, and the hurry and worry of our work prevents our sympathizing or rejoicing with them, no matter how much we might feel so disposed. And did you ever observe how few people there are who manifest any breeding when traveling! People who would be called cultured at home will sometimes act in the most shocking manner aboard a train. How frequently we see men, and even women, with their feet upon the velvet cushions in front of them. Men who would be ashamed to have it known that they use the weed will spit tobacco juice over the foot rests and floor until they render the place they occupy useless for decent people. These coaches are scrubbed, dusted and polished every trip, but people don't seem to appreciate it.

"It's a fine place to study human nature. For instance, look at that man curled up in the space usually occupied by four passengers. He thinks that because he takes his boots off he has the right to project his big dirty feet into the aixle as far as he pleases But no matter; I can squeeze by them when necessary, and perhaps give his legs a tweak now and then that will make him think we have been telescoped.

"But all people are not boors. You can distinguish the true lady or gentleman here as elsewhere. They are never impertment, drunk, nor sprawling dead asleep over the seats. They seem to take it for granted that all is being done for their speed and comfort that is possible, and are satisfied. Coarse men, women, and old people make us the most trouble. They seldom know exactly what they want, and so are never at ease. The latter class we can tolerate for humanity's sake-but the men! Why, I feel like pitching them from the train sometimes. They imagine their little slip of pasteboard entitles them to all the room they can occupy and a voice in the train management besides,

"We see all sorts of partings, of course, but there is one kind I shall never get used to, and that is a square, manly young fellow leaving his old father or mother or sweetheart. I tell you the 'God bless you!' and Be a good boy! and the tears mean something then, and don't you forget it. When he takes his seat he has plenty to think about, and you can tell by a glance at his face that life for him has begun in dead earnest. May be you have been there yourself? I have," and seizing his lantern he left me to my meditations.-Chicago News.

The Upas Tree of Civilization.

The continent is an armed camp. The nations labor, as the Jews rebuilt Jerusalem. with a sword in one hand and their industrial tools in the other. Restless, suspicious armies are encamped side by side where formerly nations lived and labored. Every year some one or other of these armies invents some more deadly weapon than its rival, some more terrific explosive, some more expeditions mode of slaughter. No sooner does this happen than all the others hasten to adopt it, piling on with desperate energy the panoply of armor beneath which humanity is crushed. Amid the ceaseless ebb and flow which were very tender in the feet and of human affairs, one phenomenon never varies. The sum total expended on making ready for slaughter constantly increases. rot was to neglect giving attention at the Every year more and more is drained from the soil in order to feed the magazines. Every year the barrack gains on the cottage, and preparation for war becomes the absorbing preoccupation of a great proportion of the flower of our youth.

From every able bodied man this armed peace exacts three, four or five years of life when it is at its richest and brightest. When the youth steps into manhood and begins to were costly preparations, and have long dream of love and labor and of the sweet since arrived at the conclusion that, if joys of home and family, there swoops down taken in time and attended to as it upon him the kidnaper of Mars and carries should be, there is nothing better to effect a cure than blue vitriol, either powvast organization for murder is the upas tree dered and applied dry or dissolved in of civilization, and all the continent is sickvinegar. Of course, where large flocks ening under its fatal shade. The first cost is the cost in actual cash paid down, t in life wasted at its prime, the third in the condition of unrest which saps the sense of security necessary for the prosecution of business. Business is difficult when peace is not worth three months' purchase. Every year commerce becomes more and more international. Every year, therefore, any disturbance of peace becomes more dangerous to the trader. Even the shadow of war now produces far more serious dislocation of in dustry than in old times was caused by the actual progress of a campaign. For in old times every parish was a little world in itself, a microcosm capable of independent exist-ence, and able to carry on its own business and grow its own crop if all the rest of the world was in measureless confusion Today all this has changed. A network of rail ar teries and telegraph nerves now knits all Europe into one organism.-Pall Mall Gazette.

Fishes of the Sea.

Though no sharp line of separation can be drawn, marine fishes are roughly divided, for convenience, into three categories-shore fishes, which habitually frequent coast lines. and rarely descend to a greater depth than 300 fathoms; pelagic fishes, which inhabit the open sea, most of them spawning there also, and the deep sea fishes, which live where the influence of light and surface temperature is but little felt. The shore fish cording to Heilprin, number upward of 3,500 species. Their northern range extends to or beyond the eighty-third parallel of latitude, but in the southern hemisphere they are not known to go beyond the sixtieth parallel. In the different zones these fishes are largely identical in both the Atlantic and Pacific pasins, as well as on the opposite side of these

Tropical waters, however, produce a greater bundance and diversity of forms than those of temperate regions, while the reefs give to the Pacific and Indian oceans more species than the Atlantic. Our still very meager knowledge of the pelagic fishes is sufficient to indicate that the number of such types is very limited. They diminish rapidly from equator, and become rare beyond the fortieth parallel. Of the deep sea fishes, Gunther enumerated upward of fifty forms supposed to have been obtained from depths agents by which the necessary changes exceeding 1,000 fathoms, twenty-six from depths exceeding 2,000 fathoms, and nine tunity for cheapening the final product depths exceeding 2,000 fathoms, and nine tunity for cheapening the final product. An incomplete removal of these chemicals means less labor and less expense; hence of 2,900 fathoms.-Land and Water,

Not the Right Temperament. Summer Resort Hotel Man-I am very sorry, sir, but you won't do here and I must dispense with your services. New Clerk-Eh! What's the matter?

"You are too thin skinned." "Oh, I mean no offense, none at all: it's your misfortunes, not your fault. You see your skin is to thin that the blood shows through. You blush up easily and when the thermometer is over 150 in the shade your face gets so red and you look so uncomfortable that it drives away custom,"-Omaha World.

The Divining Red.

Oh, yes; there are lots of people who a series of flat plates, 17 inches long and 12 they call them. I know of one being inches wide, made of hard wood, riveted between two steel plates, is the latest solution wand three feet long, of whalebone, and of the problem of an endless railway, that is, in one end was a hole plugged up with a road which is as much a part of the vehicle two ounces or absolutely pure gold and a as the wheels are. As the wheel revolves it little chemically pure mercury; in the moves along the bottom plate of the chain and brings the next plate into position without undue strain or friction. It has been used to good purpose in South America, and is now being used in the swampy land is Germany, where large beet root plantations are.—New York Sun.

other end the mercury was, with pure sliver. The rod was evenly balanced and turned on a pivot. The foolish man who owned it paid 850 to have it made. He is to search for treasure, for buried bullion.—Catharine Cole in New Orleans Picayune. Picayune,

cents, and substituting a gallon of an inferior kind worth, say, ten cents, his rival had been enabled to draw away almost all PODIONOUS DVES People have become so accustomed to finding the discussion of the subject of adulteration confined to articles of food and drink that they are apt to consider that this is the only part of it of any importance. Physicians, however, can tell a different story. For instance, they are frequently consulted for disorders which be directly traced to cheaply dyed articles of dress, and many of the most obstinate cases of skin disease are due to

poisonous coloring matters. Before the art of dveing had progressed much most of they dyeing colors in use were prepared from simple vegetable extracts. Soon, however, the demand was greater than the supply, and the chemist was called upon for substitutes. Step by step he followed nature back to her labor atory, and finally was able to announce that he could produce at will in unlim ited quantities a dye stuff which could not be distinguished by any test, either chemical or physical, from the natural product. The substance which he had made was alizarine, the coloring matter of madder, and the article from which he made it was common coal tar. This discovery worked a revolution in the industrial world. The path, once it had been pointed out, was easy to follow, and in quick succession came the announcements of new colors made from this same waste product-coal tar-until at the present day any color or tint can be supplied

But here, too, the practice of sophistication soon became a prominent factor, until the question was, not how well can dyes be made, but how cheaply, process of manufacture is a long one, and great care is required at every step to thoroughly remove the powerful chemical the indifferently finished product can be sold cheaper. Unfortunately, however, these impurities thus left in the dye are in most instances highly irritating to the skin, and when an article dyed with such substances is worn it is very liable to cause trouble, especially if the skin is chafed or scratched. - Boston Herald.

The Numerous Shad

A single shad produces 100,000 eggs, and only about 5,000 are hatched natur ally. By the artificial method 98,000 are successfully hatched. No wonder this fine fish gets cheaper every year.
