Portland Brings Suit Against Her Ex-Chief of Police.

THE PURSUIT OF TRAIN ROBBERS.

The President of the Miners' Union in the Coeur d'Alenes Gets Six Months

in the County jair.

Bodie is rebuilding.

Astoria has suppressed gambling. Umatilla, Or., claims to have an In-dian 130 years old.

Electricity will soon run all the street railways in San Diego.

Work on Portland's magnificent passenger depot has been resumed, Extensive coal fields have just been

discovered near Klamath Falls, Or. The California hop crop promises to be of a first-class quality. Picking is

All pursuers of the Collis train robbers, the Sheriff and posse and the Arisona trailers have abandoned the search.

The surplus of wheat in Oregon and Washington will be about the same as last season, but the quality is superior. Phoenix (A. T.) store recently and pur-

chased ten parlor chairs and two boxes of stove polish. A. L. Taylor, who dried his own apri-cots this season, got \$450 from 148 trees on one and a half acres in the south part of Pomona, Cal.

Thomas O'Brien, President of the Miners' Union in the Cour d'Alenes, has been sentenced to six months in the Shoshone county fail.

Threats to kill Graham sympathizers are made at Phosnix, A. T., by the friends, it is supposed, of Tewksbury, who is charged with assaulting Graham.

An immense glacial field, covering nearly as great an area as that of the Alps, but not so thick, has been discov-ered thirty-five miles southwest of Shoup, Idaho.

A young man named Cooper robbed the Superintendent of the Idaho Sam-pling Mill Company at Halley, Idaho, of \$4,000 in county bonds, and left town with the securities.

A fellow demanded a pass from the Southern Pacific at Los Angeles, and on refusal he acted so strangely the police were called on to remove Lim, but the fellow longht like a manuac and was se-cured with difficulty.

The Bradstreet mercantile agency re-ports fourteen failures in the Pacifi-Coast States and Territories for the past week, as compared with fourteen for the previous week and twenty-three for the corresponding week or 1891.

Complaints have been made at San Diego before the Superior Court against the Perris Irrigation Company of the alleged incompetency of the directors and citations have been issued for them to show why they should not be removed

scheme to pool the lumber trade of forms under one head has been originated in San Francisco, says a Tacoma trust has been sent to the Coast owners, and the development of the structing the river at this point should scheme for the past two months has been such a step be n-cessary. The sum of tractors for work on the H-nnepin cansi carefully kept from the public.

Portiand has begun suit against ex-Chief of Police S. B. Parrish for \$15,-90.,54, alleged to be due from him on collections he has been making on the city's delinquent tax roll, the full amount of which, as certified over to him by Auditor Branch, was \$37,000.

Victoria's Council has passed to its second reading the by-law granting a bonus of \$300,000 to the Northern Paand the rumor that President Horne of the Canadian Pacific has wired to stop all improvements instituted by the Canadian Pacific in case the Council votes the subsidy has caused much ex-

It is rumored in Salem that hop buyers in the vicinity of Lincoln were offering to contract a prime quality of at 35 cents. It is known positively that 25 cents has been offered near Salem for several days, but the 35-cent rumor is an astonisher. Buyers concede that the crop in England will be much shorter than had been expected, and only a small yield was counted on. Shortages are also being reported from California, where picking is already in progress.

A very large deposit of kaolin has be found in the near vicinity of The Dalles on the Oregon side of the Columbia. This atkaline earth, when beated with pure sand and potash or soda, forms common glass. As sand of the purest quality is abundant in this vicinity, and the constituent alkaline earths are also found in abundance, there is no reason. says The Dalles Times-Mountaineer, with the amount of capital lying dormant in The Dalles, that a glass factory should not be inaugurated immediately.

Arrangements are quietly progressing which are likely to result in carrying out the proposed scheme of building a motor line to Waterloo from Albany. capitalists of Portland, as well as Al bany, are willing to take stock in the project, and have been looking after the matter during the past few days. It is proposed to run an electric motor line via Lebanon and Sodaville to Waterloo, and from the falls there to fraremit power for electric lights and motive power for the street-car system of Al-

Settlers who have filed homestea ms and desire to make proof and pay for the land must prove at least fourteen of the entry to entitle them to commute and pay cash for the land. The time they have lived on the land before filing will not be allowed when they seek to commute. It will be allowed where they continue residence and make five years residence on their homesteads. This statement is made on the au hority of Captain J. T. Apperson, Register of the

Oregon City land office. A report comes from Turner and othe places in the Willamette Valley to the effect that shovers of the queer are workeffect that shovers of the queer are working in that neighborhood. In some places they are using the old dodge by changing a two-dollar to a ten by pasting the figure ten from a cigar stamp on a two-dollar bill. And in places they are passing counterfeit silver dollars. The counterfeit dollar is result deliar in counterfeit dollar is result deliar. tericit dollar is easily detected by the sleek feeling, and is lighter in weight than the genuine half-dollar, but the two-dollar bill is hard to detect, unless one is observing when receiving it.

FROM WASHINGTON CITY.

Treasury Officials Generally Observing Unusual Reticence About Recent Gold Shipments.

The Land Department has notified Representative Hermann that it hopes to be able to allow Oregon \$35,000 for surveys of public lands, and that directions have been sent to the Surveyor-General of Oregon to complete inspec tion of all surveys not yet inspected. Funds are now provided for that pur-

The sentence of the court in the case of Commander McCurley of the Alliance, who was court-martialed for run ning his vessel ashore, was eighteen months' suspension, to retain his pres ent number and to receive three-fourthof his waiting-orders pay. The Adm ral of the station has commuted the sentence to twelve months' suspension, to retain his present number and to receive

full pay. Supervising Architect Edbrooke says regarding the new eight-hour law that it will increase the cost of construction 12 per cent. The government spends about \$25,000,000 annually on public buildings, and the additional expenditure under the new law will be \$3,000,000. He says tha law may also make a serious differ-ence in the character of the public buildings to be erected in Washington, Omaha,

St. Paul, Milwaukee and San Francisco. Treasury officials, while apparently inconcerned over the recent gold ship ments, are generally observing unusual reticence in the matter. Acting Treasurer Whelpley takes a very philosophical view of the situation, and says he sees no occasion for any excitement because the Assistant Treasurer at New York recent y paid out \$1,000,000 in gold for export in exchange for treasury notes. He says that there is nothing unusual in the transaction beyond the fact that gold shipments seem to have continued a little later this year than heretofore. It A party of Pimas Indians went into a was due, he thought, to very heavy imports of late, payments for which must hased ten parlor chairs and two boxes of stove polish.

A. L. Taylor, who dried his own aprisonal forms of the season, and the usual reaction in favor and the usual reaction of the United States will soon set in.

Representative Hermann was in consultation with the acting Secretary of War, General Grant, the other day, seeking to expedite department action as to the contracting of work at the Cascade locks and the canal on the Columbia. General Grant assured Mr. Hermann that the department itself is doing all that the department that is possible and allowing no unnec-essary time to elapse, and that Major Handbury, being the officer in charge, has been directed to submit specifications upon the contract, which is to be let. So many advantages are taken by of engineers is determined that when the contract is entered into for this great work, as Congress has directed, it must be understood that no leniency will be shown, and that every particle of work must be completed in the exact time and order specified in the contract, and the contract shall be so carefully pre-pared that no advantage shall be had by legal quibbles.

The Potomac river, which is the only waterway approach to the national capi tal, after being practically unguarded for many years is at last to be supplied with modern defenses. The project contemplates empalements for four twelve-inch modern guns on 'lifts, six ten inch and three eight-inch guns on a di-appearing carriage, eight twelve-inch mortars and extensive submarine mines operated rom two mining casements. The torpedo arrangement will be one of the most complete and destructive in the world. Immediately in front of the fort the Potomac curves gracefully in the a broadside as well as a "bow on" fire upon an advancing boat before the tor pedo mines are reached. Plans have also been perfected for effectually ob \$117,100 from the general appropriation of February 21, 1891, is now being expended on this work, and should that amount not prove sufficient, an allot ment will be made from the appropria tion passed at the session recently end-Two hundred additional acres of ground at Sheridan's Point on the Poto mac, contiguous to Fort Washington, have also been acquired by the govern ment so that there may be no room for the plant.

THE CHICAGO EXPOSITION.

the Atlantic coast before Columbus of Pennsylvania shows 1,764 students, touched American shores, has been discovered near New York city.

of Pennsylvania shows 1,764 students, or twenty less than Yale, while the University of Michigan has 2,638, or just twenty less than Harvard. In the number of teachers Harvard now comes first with 253, the University of Pennsylvania second with 237, Columbia third with 220, Yale fourth with 153 and Michigan fifth with 145.

The three characteristic instrumentalties of modern civilization are the railroad, the newspaper and the common school. The common school means the acquisition on the part of each boy and girl, whether rich or poor, of the neces sary knowledge required to read the newspa er and make use of the railroad to exchange the products of their own industry for a share in the products of the world's industries. The consequence of the use of machinery and the steam ong ne is the trans'er of population from the country to the city and the substi-cution of educated directive power over nachines in place of mere hand labor. Hence everywhere education is in the escendant. After the Franco-Prussian var Austria increased its school attendonce until it has now 13 per cent. of its sopulation in school. France has increased its school attendance to 15 per nt. of its population, where it had my 9 per cent, before the battle of Se-About the same time England rehe example of France in 1881, England n 1-89 has made her schools free to all erspubils. Fatal Bravery.

In the sanguinary wars of the Turks in Hungary, Count Ludovic Lodrom, on the eve of a battle, harangued his soldiers in the true martial strain. "That is all very well," said a German veteran, stepping out in front of the ranks. "That on a swift horse, and are already thinking of saving yourself. But for us"-Whereupon Ludovic immediately dismounted, drew his sword and hamstringed the animal. Then he exclaimed: "Today, then, comrades, you shall see me as captain and soldier fighting on foot by your side and on the same terms. He was so severely wounded in the fight that the Turks, who took him prisoner, put him to death and sent his head to Constantinopie, believing his recovery impossible and that they could never carry him there alive.-All the Year

THE FARM AND GARDEN

When Danger is to be Apprehended From Alfalfa Pasturing.

Alfalfa Should Not be Cut Until the Blossoms Begin to Fall and the Pods Begin to Ferm.

I have for some time, writes W. F. Anderson in the Stockgrover, been study, ing the cause of bloat in cattle, the effect broilers, \$3.0.1@3.50; young ducks, 2.50@ ing the cause of bloat in cattle, the effect \$3.50; old geese, nominal, \$5.00@7.00; of eating green alfalia or clover. I find young, nominal, \$6.00@9.00 per dozen; very heating, and when animals between the study. very heating, and when animals have furnished, no serious results are to be apprehended; but, if cold water is taken into the stomach, bloating will immediately follow.

If they fill themselves up in the even-

ing or fore part of the night on green clover or alfalfa, then in the morning the cool dew or frost or rain that they swal-lowed with their feed has the same el-fect as drinking cold water. Inclose two cows or sheep in a green clover or alfalfa pasture where there is no water, and after they have filled themselves and become thirsty, give one lukewarm water and the other cold water, and the one that drinks the ice water will blost up and die in fifteen minutes. I find also that the leaves of the plant are more heating than the stems. There is no danger from feeding the plant when

t has age for two reasons: 1. Animals then eat more of the stems. 2. At that time of the year the water in the pools and ditches is more or less warm. There is no danger in feeding the hay after it is cured or in letting animals run on alfalfa pasture when it is partly dry and green mixed. In handling al'alfa for hay many make a mistake. The practice of forcing growth so as to make four or five crops a year is wrong. It only adds water to it, not strength, and it loses greatly by shrinkage

both in the field and stack, and makes it

little better than brown paper for feed,

Animals have to eat from four to five pounds of water to get anything out of the alfalfa hay cut so young, and it causes horses to become weak in the kidneys.

Alfalfa should not be cut until the blossoms begin to fall; then the pods begin to form, and the plant has nutriment in it. When a man cuts his alfalfa four or more times a year to put it on the market he injures himself and the balance of the community, as it is without substance or fattening quality, and per-sons who buy the hay to feed to cattle or work animals will not buy alfalia again, as they imagine all alfalfa hay is alike. Some parties, however, are unfortunate in having fields planted where the ground is always moist. In such localities it will grow too rapidly, and will be of no use but to pasture or to feed hog-or milk stalk, as it fills the place of slop very

Food and Product of the Cow.

While we do not expect to gother grapes from thorns, says Hoard's Dairyman, nor that grapes will flourish and produce in quantity or quality according to their capacity it subject to the condi-tions n which thorns delight, many co-keepers act as though they expected a well-cultiva ed and highly improved riety of cows to accomplish all that is claimed in its behalf under conditions atteriy unsuited to such performance. Perhaps the advocates for the improved variety of cows are not altoyether blame less in the matter, in that they have laid too much emphasis on the tru h hat it costs no more to keep a good cow than poor one. This is true when appled to the food of support, and me-surably true much further. But it is not tree when carried to extremes. The cowthst produces 1,000 pounds of butter in twelve months, or 600 or 40 p ands. must necessarily consume more fool than one producing 150 pounds. Here of energy" comes in. One must not expect something from nothing. The pa sibilities are in the feed. The cow trans forms these possibilities into milk, from which we make or, shall we say, extract the butter. Cows differ in power or copacity. Some can work up a large amount of food with but little waste and transform it into milk as their finished product, while others-too many, in fact -waste much of the energy contains in the food they eat. Just how this say ing or waste occurs we are not at presen Wool-Umpqua Valley, 16@18e; Wilconcerned in inquiring. Our pres purpose is to call attention to the fact

> the machine, which in this case is the That cow is the most profitable which requires the least expenditure for good support and after that can convert large quant ties of feed into milk well filled with the elements of butter and cheese. Such a cow, as C. F. Curtis says in Rural Life, "is a creature of artificial creation, and it will take artificial treatment sustain her. Her tastes must be studied and her wants supplied in every detail. She does not make this production of dried-out pasture and exposed during the day to hot suns and the annoyance of flies without the protection of shade and water. Shade and water are indispensable. Green peas, oats, clover and sweet corn will be a valuable sup, lement to sun-dried pastures."

that too much must not be expected a

Every farmer boy and his mother a least know what a disagreeabe place churning is. Sometimes the father is 23x36, spot, 8c; three-bushel oat bags, persuaded to take a hand in it, but it i not long before he has to "see a man or a horse at the barn, and he leaves the old torment to be fought out by the wile and son. A variety of ingenious powers to aid in this work has been invented for the use of dogs, sheep, et :. All thest have produced more or less vexation of spirit, as it has rarely been possible to reate in dogs especially, that interest in churning which we feel shou d belong to a well-civilized canine. A writer in the Country Gentleman states, however, that he has solved the difficulty by the purchase of a small one-half power steam engine. With it he can churn the cream of ten or tifty cows, and the expense of working it is trivial.

> It is not necessary that a farmer should make a drudge of himself and forego all enjoyment.

monstrosity—a male child sixteen inches long, weighing 9‡ pounds, its head the perfect counterpart of that of some gigantic serpent.
