Royal Baking Powder!

And the reason he gives is of interest to every housekeeper. It is that he can make more money selling the other baking powders! He says he can buy all other powders at from 20 to 50 per cent. lower price than Royal, while he sells them at the same price. That means when the housekeeper buys some powder other than the Royal she pays the same price, but gets a powder costing to make and worth only half as much.

It is a fact that the Royal Baking Powder is made from more highly refined, purer, and more wholesome ingredients than any other baking powder. Most of the others are made from alum. All of them contain adulterants or impurities. Absolutely pure cream of tartar and soda, as used in the Royal, cost more than impure cream of tartar and alum; hence the greater cost, as well as greater value, of the Royali.

The grocer who says he will not handle Royal Baking Powder because he can make more profit upon other powders proves to the consumer, most conclusively, the superior value of the Royal over all other brands.

ANIMALS IN EFFIGY.

THE FAMOUS COLLECTION OWNED BY THE SMITHSONIAN,

How Casts Are Made of Eare and Bulky

every imaginable shape, some of large size and others fitted together as if to form boxes. For the most part they look like the refuse of a workshop. Here and there one fragment or another is seen to resemble a part of a fish or other animal, perhaps a tail, or a head with a pair of fore flippers. A big slab bears the impression of a snake, as if the creature. having buried itself in mud for the winter, had waked from its torpid state and crawled away. Other objects yet more strange are faces and various parts or human bodies apparently fossilized.

These odd looking things are molds. The Smithsonian institution has been collecting them for 20 years past, and some of them have cost a great deal of money. Quite a number have been fetelfed all the way from Alaska, representing various animals peculiar to the regions of the frozen north. If a queer reptile or fish is found allywhere, there is nothing better than to make a cast of it in plaster of paris. By this means its shape is copied to perfection, and that is a great help for museum purposes. When, a few years and, a whale was strunded on the New England coust, Re. Palmer, territories of the finitivenion isentifution, was must to make a copy of it in pupier muche. This he did-that to to say, he result a mobil of the extraoran in plaster, of which he took several harmile full with him, and the pupier mucho cost was grained afterward in Washington.

Only one-half of the whale was cast, "Butte thats as to What Will Come Out at however, representing what might be termed the port side of the animal. It should be remembered that 60 years This is now loung up in the National the words in a large sease, was much museum. On one side it shows the outside of the creature and from the other side the inside. It was a clergyman who on a certain eccasion not long age was steering some members of his flock through the building, and, pausing in front of the whale, remarked, pointing rain that the money cannot be spared, flicted with rheumatism did not wear to the capacious interior of the great marino mammal:

was plenty of room for Jonah!" In such ways the Smithsonian justi-Carpets were unknown among the poor 80 years ago, even in the rustic totion has collected molds and made casts of a great variety of animals, often sending long distances to get them. Of reptiles alone it has secured several bundreds, each representing a typical species, while the fishes run up to 1,200 quired solemnly if he thought he could erior of Italy may be gathered from the have all this and heaven too. Ingrain and upward. From each plaster mold about 50 easts may be made, if deess, the entire population of the village | middle and lower classes in cities about | sired. This facility of multiplication 1830 and in the country 10 or 15 years is utilized to a considerable extent in t Citimova on Tuesday, ragged and later. Cotton goods were very dear in another branch of the work not reseless, the younger men carrying the 1820, but have steadily been sinking lating to animals at all. To schools and to museums all ever the world the Smithsonian institution sends sets of typical aboriginal implements of Amer-Ready made clothing 50 years after ica. These are valuable for purposes of study. A mold from an actual stone ax

will furnish 50 facsimiles, which only

have to be painted in order to look ex-

netly like the original. If mere are wanted, another mold is easily made. While it would not be easy to ship a whole or a walrus to the Smithsonian tense to fitting. Countless varieties of institution, smaller animals are readily cloth and a multitude of necessories in transported. Nearly all of the creatures bew, Mr. A. J. Balfour, M. P., in in the half century. Before that the of which these molds are made are sent to this city for that purpose. When supply was scanty. Men and women in practicable, two living specimens are society in Jefferson's time were well forwarded. One serves for the mold. dressed. Besatins and their gloves would compare fore going further it should be exwith those of today or were even finer, plained that the casts are intended to but the great mass of the people had represent the animals themselves in the few varieties of material to choose from museum, and they must be as lifelike and made no protense of following the fashions. They could not - New York as possible. They are painted by men

who are skilled in this branch of art. Before making a mold from a snake the naimal, if alive, receives a dose of chloroform. It may or may not recover. There have been instances where serpents have got over the effects of the chloreform two or three times in succession, only to be subjected to further tamed. In one of the pools of the city's doses and made to serve again and again. Perhaps an anaethetized ophidaquarium at Castle Garden there are a number of blackfiels, including some 15 ian will be coiled gracefully about the branch of a tree, and the mold will be taken from branch and snales together, to be subsequently painted, of cones Or, if it were a rattlesnake, it would blackfish comes up and takes it, some probably be coiled in a spiral, as if ready to strike. In the west wing of the tigating first so as to make sure that it Smithsonian institution is a beautiful was all right, and others coming up with confidence, taking the fish from the States. They look as if alive, though only casts, so well are timy painted, Sometimes a minnew escapes from with surroundings of histoge, etc., to

the fingers or from the fish that is taxcounterfeit posture. It is the same was with augitibus of ing to take it and durts away for safety, with two or times blackfish, countings quaer species of limitals in this country, manticularly in the eastern deserts. The surface of the water. It is thus protestoth on eres siste by the wall of the pool, and at the sanfone it can sayin forces than its pursuous, and being so much of Diagh valley and others which are which is worse than nothing -- Scribsmallife it can turn much quicker than able to outrun the fastest race horse. Such creatures as these are easily moldthe blackfield. It may go half the length ed, every scale in their armor Being reof the pool, bugging the wall, and then produced with wonderful accuracy of dart across the pool at right angles, with the big blackfish still after it. So detail. With land mammals it is differlong as the minnow keeps to the top it ent, for a cast of a creature with a fur coat can hardly be made to look like is safe, but if it goes to the bottom the chances are greatly against it. In deeplife. Nevertheless Dr. Palmer's collecer water the bigger fish can do better land mammals. For example, hanging on the wall of his studio in the rear of Weakfish sometimes become very the Smithsonian institution is a plaster tame in captivity. One has been known to lift its head four inches out of water head of a tapir, taken direct from the animal. When he has occasion to stuff it going in too far. to seize a live killie held in the hand. a tapir, he will not be obliged to guess at the measurements of that part of the beast. Close by is a cast from the head The families of the most famous of of a sea lion that was killed in the Pathe first Napoleon's marshals are still cific. Another cast is from the tongue prince of Monte Corvo, is represented by of a bear. Some day the taxidermist will desire to set up a stuffed bear with the Swedish royal family; the Princes its mouth open, and there will be a Murat bear the title of the brilliant tongue ready. There is also a calf's head ant is the Prince of Wagram, Lannes is which is very lifelike, though it would

not make good soup. - Washington Star. Freeman.

The Septenate Regime. The presidential term of M. Carnot will expire next December. That will complete 20 years of the "septenate" Marment, duke of Ragusa; Duroc, duke regime in France, where presidents remain seven years in power. Marshal MacMahon resigned in 1879, 21 months before the regular end of his term. M. Grevy filled a full period of "septenate," seven years. But he resigned his second presidency two years before its constitutional end. Before the establishment of the septenate M. Thiers had also resigned of duke of Conegliano-has been taken his presidential functions.-New York

PSYCHICAL RESEARCH.

Mr. Balfour Declares the Time Has Come For Science to Recognize Spiritualism. that Mr. Balfour, the leader of the opposition, has recently distinguished himself not only by the delivery of a series Animals-Proof That the Whale Could of strong political speeches, but by open-Have Held Jonah-Of Value to Students by advocating a thorough scientific investigation of psychic or spiritualistic enomena. As president of the Society Strewn along for a distance of 50 of Psychical Research he said in an adyards in the rear of the Smithsonian in- dress that he thought the time had come atitution are blocks of plaster of paris of when the leaders of scientific thought should recognize that there were well attested facts which do not naturally fall into the framework of the sciences or of organized experiences.

The proposed investigation was different from a scientific cross examination of nature, for they would have to deal with abnormal or incomplete faculties, with exceptional conditions in exception al individuals. He saw no inherent impossibility in such half formed senses being sporadically developed in the human race. They seemed to come across human facts which could not be made by any manipulation to fit into the interstices of the accepted view of the psychical world. If that were so, they were engaged in a work of prodigious difficulty. They had a refractory class of problems to deal with, but it seemed to him that at least

the material world were open, but from Sold by ail D. uggists, price 75c per which some information could be gleaned, and if they could not as the result of their exertions discover what laws these strange planomene stayed,"it would at all events by something to have shown as a mother of assertained fact that there were things in heaven and on earth which were inyoud the philosophy of grams tiller meetet sprinnstiffer,

the limiterater's Trial.

The government has shown remarkable courage in obtaining the arrest of Jalsoz Balfour, and the Tories are not a little astonished therent. It has long been a part of their political ereed that the ministers would do everything decently possible to prevent extradition and the consequent raking up of old scandals wherein those most involved are all Gladstonean Liberals. It is an open secret that Harcourt and several "You see, my door friends, that there other members of the cabinet were of this opinion, but the majority yielded to the views of Rosebery and Asquith, who contended that the credit of bringing the arch swindler to justice would amply compensate for the disadvantages. There is little doubt that more than one honorable reputation will be smirched in the course of balfour's trial.

Only the select few, mainly lawyers and bankruptcy officers, are concerned in the elaborate investigation of the affairs of the Liberator Building society. The other companies involved in its fall were really aware of the vast ramifications of Balfour's sinister influence and of the stupendous audacity of his metheds. These people more than hint that several Liberal members of parliament ought to be placed in the dock alongside Balfour, and that the law and the facts would not be unduly strained if at least one miner member of the government should be included in the indictment.
