THE WOOD DUCK'S FIRST SWIM.

the Mother Gets the Little Ones From the Nest to the Water.

A few miles from my home there is a lake that has for years been the abiding place of a colony of wood ducks. I have spent hours along the shores watching these prettiest of water fowls. The wood tack has one peculiarity not possessed by other members of the duck familyit builds its home high up in the cavity of some decayed limb, usually one that tits out over the water.

The eggs, from seven to 13 in number, are creamy white in color. Housekeeping is begun in May, and the young are ready to leave the nest early in June. I was curious to know how the little ducks reach the water from their lofty homes 1 had often seen them, when hardly clear of their shell, swimming about with their mother and felt convinced that they never could have left home unnided.

One bright June morning fortune favoted me I had rowed along the lake shore to pay a visit to a houseful of noisy red wing blackbirds. My boat was lying motionless among the tall cattails that fringed the shores of the lake. Suddenly I heard a lond splash behind me, and turning to look I saw on the

water a short distance away, just shaking the spray from her wings, a female wood duck and near her two tiny yellow balls, so small that they resembled water lilies floating on the surface.

The old bird took wing, hovered and circled above her babies for a few min- took possession of me, my breast was ates and then flew to a cavity in a tall sore to the slightest touch, and my tree, a short distance away. In a short limbs were like cold clay. The hardtime the male bird, arrayed in the hand- est rubbing with the coarsest towel somest of plumage, joined his mate. Then for a few minutes I could hear a and the least exertion would so exhaust soft cooing noise, which reminded me of me that I could barely gasp for water. husband and wife discussing some important point relative to the welfare of they diagnosed my case as above stated. their children

A FREAK OF NATURE.

The Navel Orange and How It Came in This Country.

The first navel orange was doubtless a freak or "sport," as horticulturists ay. To make such a fruit by artifice would be impossible. It is abnormal even in the bud. The navel shows in the bud as early as the latter can be examined under the microscope. It may even be traced back to the flower, which is double-though that word does not express the idea very well, each blussess naving a secondary blossom within it. In the developed fruit the navel is itself a secondary orange, in some specimens having a distinct skin surrounding it. The two story erange is no novemy. A book on herticulture published in 1642 gives a picture of the nevel spange paid calls it "pomnon Adams furthers. This is the earliest peferense known The blossonss rasely have any polles, and the frait is assally, though not always, seedless. The variety is reproduced by budding. Where it asigianted is not known with certainty, hot it was probably in southern Asia. Thense it was mail.

nean and eventually diffused over the world. A lady whe had traveled in Brazil told Mr. Saunders, chief pardener of the department of agriculture, about the orange, which she had seen in that country. Acting on this information, Mr. Saunders told a Star reporter that he sent to Bahia and secured a dozen young budded trees. These reached the United States in 1870, being the first navel orange trees known here.

From these trees others were propa gated. One of the first batch thus obtained is now in the orange house of the department of agriculture. In 1873 two of the trees were sent to Mrs. L. C. Tibbets of Riverside, Cal. At the same time others were sent to Florida. But those planted in California fruited more quickly and were the first to attract attention. It soon became evident that the climate of that state was better suited to the cultivation of this variety. In Florida it is not sufficiently productive-i. e., does not bear freely enough to be profitable. Nevertheless the finest navel oranges come from Florida, though they are not so handsome as those from California. -Washington Star.

Roses From Pos's Grave.

A pretty and poetic suggestion is first of the half dozen or so which the made to help the fund for the Edgar Duke of York's son will carry through Allen Poe monument in Baltimore. It is to cultivate roses on the poet's grave and sell thom at fancy prices.
