#### A STORY OF WEATHER

WHY THE MONTH OF MARCH IS OFTEN BLUSTERING AND STORMY.

Some Facts About Weather Changes-Cold Currents From the North and Warm Ones From the South-Effects of Mag-

March impresses itself upon the dweller in the northern half of the United employment and all applications for States as a particularly windy and disagreeable month, with strong alternations of wintry and mild weather. This assistance for the bureau as may appear is due to the breaking up of the conditions that have prevailed since December and the processes of return to spring shall, directly or indirectly, be charged and summer. There is in the arctic zone or received from any person or persons an enormous amount of cold material to applying for labor or employment be disposed of, covering the northern through the office. The commissioner, regions in the form of ice and snow. At any superintendent or clerk or any other the same time the southern zone is be- person employed in any such office coming decidedly warmer in conse-charging or receiving any compensation quence of the advance of the sun to the or fee from any applicant for labor northern side of the equator.

theater of this contest between the or, and, upon conviction, shall be fined giants of cold and heat, and they stag- any sum not exceeding \$100 or imprisger back and forth over this territory as one or the other is for the time being in Recorder. the strongest form. The cold waves launch themselves from the north and carry their icy chill to the warm south ern states; or, on the other hand, the warm currents of air from the south advance far into the north, and this alter nation causes a rapid variation in the temperature and the other weather conditions at stations of the middle lati-

An examination of the storm tracks for March gives very definite evidence of the effect of this struggle for supremacy. Instead of being confined to the neighborhood of the mean tracks, it is found that they spread out over the entire territory of the United States from north so south. The phenomenon of looping southward along the Rocky mountain slope before recurving northeastward to the gulf of St. Lawrence is most pronounced

The storms which first develop in Alberta or on the north Pacific coast may advance directly eastward over the lakes to the gulf, or they may be pushed south and recurve in Colorado, Missouri, southern Illinois or southern Indiana, in order to move to the St. Lawrence valley, or else they may be propelled still farther south along the Rocky mountain slope to Texas and the gulf coast, whence they proceed to the south Atlantic coast, and then turn northward to Newfound land. Not a few of these storms dissipate in the lake region or the Ohio valley; others will persist in a path of nearly 5,000 miles, from Alberta to southern Texas, South Carolina and finally to Newfoundland. The unequal distribution of the tracks of the storms in March is therefore due to the irregular propulsion of cold masses of air from the arctic regions into the middle of the

North American continent. A peculiarity of continental action is that in summer the interior is warmer spent the day hunting up the records. than the borders, but in winter the interior is colder than the coasts. The upper lake region and the upper Mississippi valley are especially remarkable for this feature. Between the 95 degree and 100 degree meridians, and between parallels 50 degrees to 55 degrees, the change in temperature is the greatest known in North America; it is coldest in winter there, and also it may become the hottest part of the country in summer; the range of temperature may be at this season. The hustlers cease to from 45 degrees below zero in winter to Gazette. the tireless grow weary, the ener-become enervated. You know just range of 150 degrees. The eneroachments of spring upon the winter in North America proceed from the extreme southwest, the gulf of California and the Colorado river valley, and ad-

vance toward the northeast. This leads to a description of one of the most characteristic features of the advance of the summer upon the North American continent. In winter the line of equal normal temperature, that is the isotherms, are grouped about the cold pole in quite a symmetrical man ner, bending southward in the interior as they pass from the Atlantic to the Pacific coast. This configuration may be regarded as normal from November to March inclusive. In the summer the formation is somewhat inverted, the lines bending northward from the coasts toward the interior, though the crest is now farther west in the dry Rocky mountain region. The gulf of California is the central region of heat, and the crest extends from Yuma, A. T.,

northeastward toward the Dakotas. The magnetic force seems to be efficient in producing meteorological effects in proportion as it can operate in cold atmospheric conditions. Hence the encroachment of warm air from the southern Rocky mountain districts, as spring comes on, is unfavorable for this kind of action, and it seeks to transfer its seat to the portions of the interior of the continent that still retain low temperatures, namely, to the Hudson bay districts. Finally, as the summer heat conquers this cold territory, the winter high passes away entirely, and the whole arctic region is covered by low

The unsettled weather of the month of March, especially in the portheastern portions of the United States, with its rapid alternations of warm and cold winds, often reaching considerable violence, is, therefore, the parting salute of the cold winter that has prevailed for five months throughout the northern cap. A most impressive feature of this change, as deduced from a close study of the barometers and temperature readings of the weather bureau, is the suddenness with which the struggle is concluded in the northwest, for March often comes in with a very violent action, more than a day. Silk ties of light coland this is almost certain to end about ors should be of wash silk, so that they the 20th of the month with moderate may frequently be washed, and dark movements of the air. The struggle is silk and satin ties should occasionally prolonged in the east, but is usually be freshened by a sponging with ammoabout over by the 10th of April .- Writ- nia water, ten for Philadelphia Press by the United States Weather Bureau of Washing-

WHO OWNS RHODE ISLAND?

Surviving Members of the Narragansett Indians Claim 135,000 Acres. Who owns the scuthern portion of the state of Rhode Island? That is the important question that has just arisen to trouble the political leaders of the state. The other afternoon at a powwow of the surviving members of the Narragan sett Indians they announced that they were prepared to assert their right of ownership to \$4,000,000 worth of land in that state. On April 7 the general assembly will be given an opportunity to show why the property should not be returned to the Indians.

The tract of land in question comprises the greater portion of the southern part of the state. It includes the towns of West Greenwich, Exeter, Richmend, Hopkinson and portions of the towns of North and South Kingston. It consists of nearly 135,000 acres of land.

This council, or powwow, was held at the old meeting house on the Indian reservation, in the town of Charlestown. Notices had been sent to the members of the tribe, asking them to make special efforts to be present, and a large number responded .- New York

#### FARO BOX PATENT.

Uncle Sam Innocently Granted One to Robert Bayley In 1812.

During a discussion over a sociable game of cards a few evenings since, in which several prominent congressional people took part, the statement was made that the fare box, an instrument in use in every gambling establishment of the land, had been consecrated by letters patent of the United States. To settle the controversy two of the parties

They found that Robert Bayley was given a patent May 15, 1812, for a new and useful improvement called the fair dealer or the chartme lusodime. The letters patent were under the hand of James Madison, president, by James Monroe, secretary of state, and were executed by William Pinckney, as attorney general. In the schedule which was attached to the patent the ordinary faro deal box is described perfectly .-Washington Cor. Cincinnati Commercial

#### NO MORE DEATH DANCES.

Osage Indians Ordered to Cease the Custom by Their Chief.

Chief Debolt, the head medicine man active politician, has issued an imperative order discontinuing death dances in the nation.

When an Osage dies, according to a long established custom all his relatives go absolutely naked until the death dance, which occurs 30 days after the fatality. This custom of going naked has played havor with them, making them subject to colds that invariably ended in consumption.

Seven per cent of the adults of the tribe are now in the last stages of consumption, and it is this alarming fact that called forth the edict. The importance of the measure is so great that plication of this discovery are vast." death dances will be treason against the nation.—Chicago Times-Herald.

#### Matron or Maid.

In The Athenseum it was recently The X Rays Pick Out the False Ones said that "the Oxford movement in favor of granting the B. A. degree to qualified women seems to have gained a probably be backed by the vice chancellor, one of the proctors and other university lights and leaders. But how can ladies, married or unmarried, ever be "learned matron," with bonnet, gown, streamers and hood of another cut and color, symbolizing the distinction between maidenhood and wifehood. -London Punch.

#### Learn to Tie Your Ties.

Every woman who aspires to wear the art of tying them. Her sex is no excase for the wearing of a ready made cravat. She should also be sure that her ties are spotlessly neat and fresh. Linen and lawn ties should be worn never

The ties most worn are the straight bows. The four in hand is also fairly popular. Plain colors prevail. Black is the color most used, but plain colors to match the tailor made frock with which they are worn are also correct.-

### TESLA ON THE X RAYS

THEIR ALMOST MAGIC POWERS SHOWN BY HIM

The Young Electrician Obtains Results That Suggest New Fields of Usefulness For Professor Roentgen's Discovery-May Cure Diseases With Rays.

An article by Nicola Tesla is published in the current number of The Electrical Review describing his experiments in radiography. The scientific world has been eagerly awaiting an expression of opinion from Mr. Tesla, who is known to have begun his experiments within half an hour after the news of Professor Roentgen's discovery was cabled to this country. Two remarkable radiographs are printed with the article. One of these shows the right shoulder of a man taken through his clothing and through a plate of glass three-sixteenths of an inch thick and two inches of wood. This radiograph, which was made at the distance of four feet from the source of the X rays, shows the ribs, shoulder bones and bones of the upper arm. The other radiograph shows a copper wire bent to form the word "Roentgen," and was made at a distance of 11 feet from the wooden slide covering the sensitized

Mr. Tesla also states that the rarefaction of Crookes tubes used in these experiments may be increased by electrical means to any degree desirable, far beyoud that obtainable by mechanical appliances. In regard to the nature of X

rays he says: 'I am getting more and more convinced that we have to deal with a stream of material particles, which strike the sensitive plate with great velocities. Taking as a basis the estimate of Lord Kelvin on the speed of projected particles in a Crookes bulb, we arrive easily by the employment of very high potentials to speeds of as much as a hundred kilometers a second. Now, again, the old question arises. Are the particles from the electrode or from the charged surface generally, including the case of an external electrode, projected through the glass or aluminium walls, or do they merely hit the inner surface and cause particles from the outside of the wall to fly off, acting in a purely mechanical way, as when a row of ivory balls is struck? So far most of the phenomena indicate that they are projected through the wall of the bulb, of whatever material it may be, and I am seeking for still more conclusive evidence in this direction. It is now demonstrated beyond any doubt that small metallie objects or bony or chalky deposits can be infallibly detected in any part of the body.

Tesla has also secured radiographs showing the bony structure of birds and rabbits, even to the hollow of the bones. He has secured a radiograph of a rabbit after an hour's exposure in which not only every detail of the skeleton is visible, but also a clear outline of the abdominal cavity, the lungs and the fur. Radiographs of large birds show the feathers distinctly. In another instance an exposure of 40 minutes gave a radiograph of the human skull, showing clearly not only the outline but the ple, lost in 76.49. cavities of the eye, chin, cheek, nasal bones, the lower jaw and connections to the skull, the flesh and even the hair. Mr. Tesla concludes his communication

"By exposing the head to a powerful radiation strange effects have been noted. For instance, I find that there is a tendency to sleep, and the time seems to pass away quickly. There is a general soothing effect, and I have felt a sensation of warmth in the upper part of the of the Osage tribe of Indians, and the head. An assistant independently confirmed the tendency to sleep and the sicians. Mrs. Ada Gregg is a preacher, quick lapse of time. Should these remarkable effects be verified by men with keener senses of observation, I shall still more firmly believe in the existence of material streams penetrating the skull. Thus it may be possible by these strange appliances to project a suitable chemical into any part of the body.

"Roentgen advanced modestly his results, warning against too much hope. Fortunately his apprehensions were groundless, for, although we have to all appearance to deal with mere shadow projections, the possibilities of the ap-New York Sun.

#### TO TEST DIAMONDS.

Every Time.

Professors Anderson and Wells are scoring new triumphs in their experinew impetus," and the petition will ments with X rays at the Kentucky State college. Their latest experiments have been with diamonds.

Mr. Victor Bognert took a tray of jewels out to the college Friday night 'bachelors?' Why not a new and special for a test. He mixed specimens of degree for them? We have maids of quartz, glass, rhinestones, etc., among honor, bridesmaids, housemaids and so the diamonds, and the rays picked out forth. Why not for the unmarried "L. | the genuine stones every time. When a M.," which will serve for "learned (or lovable) maid?" She will wear a be-shadowgraph is formed, as they penecoming cap, showy gown and a hood. If trate the genuine stone, but the false married, the letters L. M. will stand for article shows quite a distinct shadow. -Cincinnati Enquirer.

The conference of political reformers who are to meet in Pittsburg March 10, 11 and 12, has attracted the attention of the country to such an extent that the organization of a new party is now ties should make a painstaking study of a certainty, and a nominating convention will be held in May, before the convening of the Prohibition party convention, and in advance of the convention of other existing parties.

The answers to inquiries sent out nearly all favor a convention May 20, 21 and 22. - Boston Journal.

Boys Cannot Smoke In Lincoln, Neb. The Lincoln (Neb.) city council has passed William Lawler's cigarette ordinance. This ordinance prohibits the use of cigarettes, cigars or tobacco by persons under 18 years of age in the city limits. The police under this law are authorized to arrest without a warrant any person who comes under the ban of this law. The fine to be imposed is no more than \$25 for each offense. Conncilman Lawler is also the author of the Mme. Gith, cantiniere of the Fifth curfew ordinance which was passed

#### Has No Private Life.

Cecil Rhodes, when asked by an interviewer in London to mention a point or two as to his private life, replied, "I

### WILL COMMIT ANY CRIME.

For \$5,000 This Man Will Sell Himself For Any Purpose.

There is a man in Chicago who wants to be given a chance to kill somebody, steal something or commit any other crime in order to make the few remaining days of his old mother a little brighter. He offers himself for sale. For \$5,000 he stands ready to do anything for anybody who has his price. He has written the following letter, which fully explains his position in the matter and is not susceptible of being

"For \$5,000 I will sell myself to any one wishing a slave. I will do anything the buyer asks, drudge as his slave or kill myself, insured in his favor. I will kill or steal, taking all the responsibility myself.

Do not think I am insane, for I am not. I am only tired of futile, honest efforts, and I have an old mother whose remaining days I have dreamed of making brighter. I have knowledge enough to make a Holmes, detection being beyond human possibility. Only partial knowledge is dangerous, and unfortunate passionates, only half rascals, only incompetent scoundrels are detected.

"I have tried to be honest and to see a brother in every one suffering. Slander and deceit have been my reward. hunger my follower. Now I am tired of it and would die, not to be spoiled and embittered more than I am already by our Christian world. But I have an old mother, and for her I will sell myself to hell, if hell will pay me, as heaven does not seem to care for honest effort.

"I am too poor now to turn a successful scoundrel independently. I have waited too long, and so I am for sale. Answer this prayer if you have the cash and desire to buy me. I am no man for half measures and will stay good for the contract. "-Chicago Tribune

#### SEEKERS FOR THE POLE. Chronological List of the Brave Men

Who Challenged Death. Should verification be received of the report that Nansen, the Norwegian arctic explorer, has reached the north pole, his countrymen may proudly say that what Norsemen failed to do 600 years ago remained undone until it was accomplished by a Norseman in the present year. Chronologically the record of arctic exploration may be outlined as follows:

1266-Norsemen, 75, 46, 1827-Captain Parry reached latitude

1827-Captain Ross, with the Vic tory, lost in ice, reached latitude 81.27. 1845-Sir John Franklin, with the Erebus and Terror, lost in the ice. 1853-Dr. Kane, Advance, reached

latitude 80.85. 1871-Captain Peterman, Hansa,

1871-Captain Hall, Polaris, 82.16. 1876-Captain Nares, Alert and Disovery, 83.10.

1878-Nordenskjold, Vega, 77.41. 1879-Lieutenant de Long, Jeannette, lost, 77, 15. 1883-Lieutenant Greely, Proteus,

82, 24, 1891-Lieutenant Perry, Kite, 83.24. 1892-Bjorling and Kalshmins, Rip-1898-Lieutenant Peary, Falcon,

82,84.—Chicago Chronicle.

#### RUN BY THE WOMEN.

Decatur, Mich., Has All the Principal Offices Filled by the Fair Sex.

In Decatur, Mich., the population of which is 1,500, the president of the village council is Mrs. Alma Sage, and all of the town offices, except that of official dog catcher, are filled by women. Mrs. Dr. Kinney is one of the leading phyand her church, the Advent, is taken care of by a janitress, Mrs. Barnett. The restaurant of the town is conducted by Mrs. Crane and Miss Haines. The biggest store in the place is owned and kept by Mrs. Mary Schood. Mrs. Nicholson is the postmistress. Miss Clara Hotaling is a shoemaker and a good one. May Percival is a furniture maker. Miss Anna Pardnett makes harness. Mrs. Carpenter is a florist. Mrs. Child is a carriage painter.

There are several women painters, weavers and brokers. The women have a secret society run on the endowment plan. There is also a woman literary club. The women control the saloons, and the only things to drink are soda and pop. In a village near by there is a woman undertaker, who can attend to all of the details of a funeral, even to driving the hearse.-Utica Observer.

#### Mrs. Stanton s aufe.

days for smoking a cigarette on the streets. It would be inconvenient, for Mrs. Stanton wrote of herself not long ago: "I am a moderate eater, enjoying simple food. I have always worn my clothing loosely, resting on my shoulders, and of the lightest material, with the lightest trimming possible; large boots, broad soles and low heels; consequently my feet have kept up with the weight they were required to carry. Not a nerve or a muscle, from head to foot, suffers any pressure from clothing. My teeth are all sound, my hair luxuriant, my hearing perfect and my eyes still able to read fine print without spectacles. I have brought up seven children, kept house 60 years and worked in all the reforms. And now, in the sunset of life, I am still busy with pen and tongue, as deeply interested as ever in all the questions of the hour, feeling with Longfellow that

"Age is opportunity no less
Than youth itself, though in another dress,
And as the evening twilight fades away
The sky is filled with stars invisible by day."

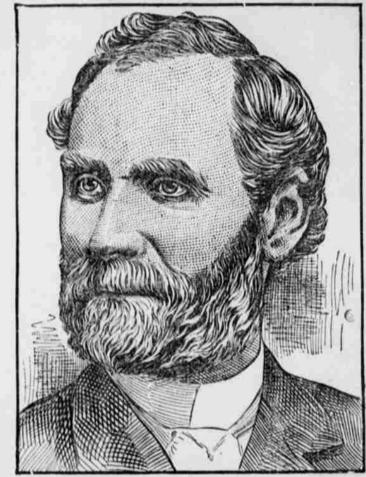

Newnham, England's well known wom-

#### A Miniature Parliament. There is a miniature parliament at

an's college, with a cabinet and prime minister of its own. The Conservatives are just now in power, in this young legislature, which yields nothing in spirit and ardor to its prototype on the Thames embankment. It has legalized the open ing of museums and picture galleries on Sundays, but declined to allow Sunday opening of theaters and other publie places of amusement. The most exciting debate of the session was on voluntary schools, when, after a hard fight, the government, by a majority of ten, passed a motion "viewing with disfavor" the action of the educational department in placing voluntary schools under disadvantages compared with board schools. An intercollegiate debate has been arranged with Girton, its sister college, the motion to be, "That it is good for society that people should be afraid of being thought peculiar."
