Effect of the Ray on Air.

At a recent meeting of the Royal So-

communication on "The Electrification

of Air by Roentgen Rays," the out-

come, he said, of some experiments

which had occupied his attention for

some months. The primary object of

these investigations, of theoretical

value only, was to ascertain the action of

Roentgen rays upon electrified air; that

is, to see whether the rays had any

electrifying effect on the air. In every

case the experiments showed that air

which had not been p eviously electri-

fied was negatively electrified, and air

that was positively electrified having

been submitted to the action of X-rays

was found to be either not electrified at

all or slightly negatively electrified.

decided electrifying action, positively

electrified air losing its positive charge,

and sometimes acquiring instead a neg-

A DEPARTMENT PREPARED FOR OUR RURAL FRIENDS.

Vegetables Should Be Worked When the Leaves Are Dry-Directions for Dressing Root Crops-See that Your Barns Are Insured,

Hints for the Garden.

Work the vegetables when the leaves are dry. This is especially necessary for beans and peas. If worked when the leaves are wet, it will produce rust and injure the crop at least one-third its yield.

Root Crops, -- Beets, parsnips and carrots should be dressed out with the wheel or hand hoe as soon as the plants have made the fourth leaf. The ground ould not be dug up, but only scraped up-just enough to cut all the weeds be ground sharp. With a good steel hoe the young weeds can be cut close up to the plants very rapidly. This work should be done before the weeds have become deeply rooted.

Onlons.-When the onlon bulbs commence to swell take a scythe and cut the tops off about one-third. The cutting of the tops will throw the strength into the roots. After the third work

Bunch Beans and Late Peas.-These Cut this out. You won't see it again should be sown every two weeks. Plow the ground deeply and harrow it finely; run the rows out at least six inches deep and scatter about half an luch of fine hotbed manure or barnyard scrapings in the bottom of the furrow. If the ground should be dry, water the furrow well; then sow the seed and The seventh triennial meeting of this cover in at once.

should be allowed to grow after the gel from a smooth-bore gun with Philadelphia (inaugural), 1876; Paris month of May. If the bed is cut over at a velocity as any projectile now (first congress), 1878; Bonlogne, 1881; too often it weakens the roots matesarged from rifled cannon, it will Berlin, 1885; London, 1888; Washing- rially, and if the season should be a lationize gunnery. Colonel Bell ton, 1891; Geneva, 1894. In each dry one these weakened roots will die

Rhubarb.-The young rhubarb roots require clean and frequent cultivation. the leaves turn yellow it is a sign is to be the cheapest, surest and for studying the prominent physical that the soil is poor. Spread around each root a peck of tine manure, and with the maddock dig it in,

Rhubarb Plants, About almost every farmhouse can be found an old, neglected row of rhubarb plants from which a few cuttings are made in spring for sauce or pies. The sourness and oftentimes rank flavor of these old rows of pleplant, as it is otherwise called, make a little go a good way in most households, for after two or three cuttings the plants are usually abandoned and allowed to go to seed. This is all wrong. A good variety of rhubarb is worthy of being eaten the year around. Instead of will be delivered at St. Petersburg keeping on with the poor kind, send for a package of rhubarb seed of one of the improved sorts, such as Myatt's Victoria, and sow it in a garden row. The plants will come from seed as readily as carrots or beets and mostly true their kind, and the second season cuttings can be made freely. Cut off seed stalks as they appear and keep the ground free from weeds and well cultivated. If the rhubarb is given a garden row, this cultivation will come in with the regular garden cultivation and will give no trouble. Many farmers' families do not appear to realize that rhubarb can be had in winter as well as summer. Cooked as for sauce. either sweetened or unsweetened, and succeed the meeting, include a visit sealed in glass jars, it will keep perfeetly, and will be greatly relished in the middle of winter.-Agriculturist.

Insure Your Barns, Before the harvest is gathered, see that you have placed a reasonable insurance on the barn, out-buildings coniety of Edinburgh, Lord Kelvin read a nected with the barn and on the hay barracks in the fields. Have the amount of insurance specified and written out in the policy on each building insured; then have the stock insured, the wagons, carriages and farm tools; and then the hay, grain and provender. The rate of insurance is 45 cents per \$100 in a good stock company, and in a mutual company much lower. There should be no delay in this matter, nor should there be any mistake made in placing the insurance upon the right buildings. With the best of care the barn may be burnt down by accident, and without an insurance the labor of years is lost in a few hours. A yearly insurance should be had.-The Ameri-

Directing Hired Help. Laborers earn more when they are kept at one kind of business throughout the day. If they are directed or permitted to go from field to field, or England and Wales exceeds the numfrom one kind of business to another, they will not always give a good account of their day's work. It is a good practice to let our work by the job when it can be done. Then the man light from the sun as could be emitted | feels that he is at work for himselfand, of course, he will do more work

than he would for another man, Ditching, wood cutting and other business may be jobbed out. And this when the employer is not at home to direct the work. But the business of plowing, barrowing and tilling among the corn and potatoes should be done in the presence of the owner. When the ground has been well prepared, and no weeds interfere, a good man, who is used to handling a hoe, will dress an

It is fortunate that men of large capital cannot invest in farms, and realize as much as in bank and railroad stocks. If they could they would soon own most of the farms in the country. And farmers would become tenants, stead of owners, of the soil.-Farm and

Potators for Export. A correspondent writes from Paris that petato culture is liable to receive s new impetus since the plan of welling them peeled, sliced and dried, like certain fruits, seems to be the taste of the export market. The drying of the potatoes can follow the period of the desiccation of fruits. The method obviates decay and germination of the tuber, and, occupying a less volume ransport will be cheaper and less diffiult. The potatoes are peeled by mabluery, next carefully washed, sliced in rounds, and left for twenty minutes n a strong solution of kitchen salt. The orine produces firmness in the slices, securing what sulphur does for fruits. | you."

TOPICS FOR FARMERS Later the cuttings are left to draite placed in the drying apparatus on hurdle placed in the drying apparatus on hurdle shelves, and submitted to a tempera ture varying from 194 degrees Fahren helt. They must remain longer in this slices have to be steeped from twelve to fifteen hours in water when they will become as fresh and as flavory as new potatoes.-Exchange.

Leghorus for Eggs,

For eggs nothing will equal a Leg forn, so it would be best to select White Leghorn cockerel for the year lings and a White Leghorn cock for the pullets. When the chicks are two days old, take a pair of seissors and snip off their wing on one side at the first joint so as to remove all flight feathers, and they will never bother you by flying and can be kept within a two and a half foot fence. This must be done at night by lamplight, so that the other chicks will not pick at the single drop of blood that forms. By morning these are heal way from the plants. The hoes should ed and the chicks as lively as crickets No bad effect is noticeable, and in the future the Leghorns are no more trouble than any Brahmas. Leghorus can be put in pens of fifteen to twenty hens o one cock, according to the vigor of the cock. The best capons are made from any of the heavy breeds. None of the smaller breeds is worth bother ing with. Germantown Telegraph.

Soaking Persnip Sect.

It is very hard to get parsnip seed to grow, probably because the dry, woody covering over the germ absorbs water very slowly. The seed needs so long a time to germinate that weed seeds which have been soaking in the ground all winter get the start and make it a difficult crop to care for. We have always found it an advantage to sonk the seed until it was beginning to sprout. At first it should be put in water as hot as the hand can bear, and so kept fifteen minutes. This will be enough to wet through the outside covering, and will thus hasten germination. When the seed is planted especial care should be taken to compact the soil closely around it.-Exchange,

Seeding Clover in Knolls. It is often hard work to get a clover seeding on the dry, elevated knolls in grain fields. Lack of moisture is usually the cause. But the evil may be remedied by drawing a few yards of stable manure and spreading over the knolls. The manure not only protects the young clover plants, but it also holds the moisture in the soil, by checking evaporation. This will soon make them as rich as any part of the field. It is usually the lack of clover seeding \$10.50; middlings, \$23.50. on such places that keeps them poor.

Thin the Fruit Early. to have the sap all turned to the fruit that is intended to be left to make a Fruits that are likely to fall early, and thus thin themselves, may be left till this self thinning has been partly accomplished. But when three and sometimes four buds for clusters of grapes are seen on a young shoot, it is always safe to thin them to two. The fruit will be finer and better,

cracked fruit, scatter wood ashes all 6 c per pound.

Street, St. Louis, was given the usual mercurial treatment for contagious blood poison. He was twice pronounceed cured, but the disease returned each time, he was seized with rheumatic pains, and red lumps and sores cov-

A LETTER TO WOMEN.

A few words from Mrs. Smith, of

Philadelphia, will certainly corroborate

the cla m that Lydia E. Pinkham's

Vegetable Compound is woman's ever

able; but as soon as I would put my

feet on the floor, the pains would

ble for me to get well. I was paying \$1

per day for doctor's visits and 75 cents

a day for medicine. I made up my mind

to try Mrs. Pinkham's Vegetable Com-

pound. It has effected a complete cure

for me, and I have all the faith in the

world in it. What a blessing to woman it is!"-Mas. Jenste L. Smith, No.

374 Kauffman St., Philadelphia, Pa.
