It was only last June that the disaster took place; about four months ago. It seems a long interval, but it is really a short one, and it would be remarkable if it were not still in everyone's mind, What new bull leader would now invite the comparisons which would inevitably be made; what banking concern would hazard the criticism which would follow any favors toward a buying campaign in grain? Have the losses of last summer's collapse been forgotten yet? There must be a good deal imaginative about any bull deal. Not one savance in twenty is a mere matter of consumptive demand or of actual scarcity. There must be a great deal of theory with advancing prices; people must forget prudence, become venturesome, permit more or less exhiliration.

Would it not be like holding a picnic at the close of a funeral to permit much bull spirit within four months of the Leiter failure?

Is not the fact that such a volume of grain is financed and the price sustained evidence that the volume of speculation is larger than the very narrow fluctuations would

Cuba will be assumed by the United States and pro rated among municipalities when a permanent government is established. In making this concession the Americans were actuated by a desire to protect American interests. The water works, electric-lighting plants and other municipal improvements were largely constructed by American capital, the bonus being guaranteed by the Spanish government.

State department officials say that he assumption of the Cuban municipal debt was contemplated from the outset in the event of Spain making the plea that the indebtedness was incurred in improving the conditions of the island. This view is indorsed by international lawyers. As Spain did not derive any benefit from the money expended in improvements in Cuba and will not in future, jurists say it is only proper that the United States assume the indebtedness for municipal works. The contracts already made for municipal mprovements will also be honored by the American government.
