We challenge the reader to successfully controvert the assertion that ap acre of thrifty, well-cultivated, producing orchard trees in the valley of Rogue River will yield a net yearly income of \$100. It will average 100 trees to the acre, and the estimate is based upon the demonstrated fact that each fruit tree will produce \$1 in value, net, of marketable fruit each year.

In other words an acre of producing fruit trees has a valuation of \$1000. It is better than any bank—for the bank is sometimes carried into Canada by the cashier, Dame nature—a trust-worthy guardian takes care of the principle, and the dividends never fail. Of course if you plow your erchard once in twenty years, and rob the trees of their nourishment by making a cornfield of the orchard ground, and invite the birds and orchard pests to make a restaurant of your orchard, you must not complain that your horticultural methods have precipitated a

foreclosure of the mortgage on your orchard.
