

Fall Plowing a Preventive. Probably the most serious losses of the corn crop come from insects working underground. As soon as the seed is planted it may be attacked by underground insects. A species of thousand

legged worm sometimes devours the germ, while the wireworms attack the seed as soon as the spronts begin to push forth, and as soon as the plant has begun to grow the stalk may be cut off by different kinds of cutworms or attacked by sod webworms. Later the corn root worm, working on the roots,

devouring them from the tip toward the stalk, cuts off the food supply of the
