### of Which the Public Knows But Lit-tle-Worthy Careful Consideration.

To the Editor of the Scientific American: Will you permit us to make known to the public the facts we have learned during the pante the Jaca we have learned airing the past 8 years, concerning disorders of the human kidneys and the organs which diseased kidneys so easily lareak down. You are conducting a scientific paper and are suprejudiced except in favor of TRUIN. It is useless to say no medical Journal of "Code" standing would admit these facts for every chairm.

for very obvious reasons.

H. H. WARNER & CO., Proprietors of "Warner's Safe Cure."

That we may emphasize and clearly explain the relation the kidneys sustain to the general health, and how much is dependent upon them, we propose, metaphorically speaking to take on the control of the cont aphorically speaking, to take one from the hum in body, place in the wash-howl before us, and examine it for the public benefit.

You will imagine that we have before

Tou will imagine that we have before its a body shaped like a bean, smooth and glietening, about four inches in length, two in with and one in thickness. It ordinarily weighs in the adult male about five ounces, but is somewhat lighter in the female. A small organ? lighter in the female. A small organ? you say. But understand, the body of the average size man contains about ten quarts of blood, of which every drop passes through these filters or sewers, as they may be called, many times a day, as often as the heart, making a complete revolution in three minutes. From the blood they separate the waste material, working away steadily night and day. working away steadily night and day, sleeping or waking, tireless as the heart itself, and fully of as much importance; removing impurities from sixty-five gal-lone of blood each hour, or about fortylone of blood each hour, or about forty-nine barrels each day, or 9,125 hogs-heads a year! What a wonder that the can last any length of time under this prodigious strain, treated and

neglected as they are?
We slice this delicate organ open

lengthwise with our knife and will roughly describe its interior:

We find it to be of a reddish-brown color, soft and easily torn, filled with hundreds of little tubes, short and thread-like, starting from the arteries, ending in a little tuft about midway from the outside opening of a cavity of con siderable size, which is called the pelvis, or, roughly speaking, a sack, which is for the purpose of holding the water to further undergo purification before it passes down from here into the urelers, and so on to the outside of the body. These little tubes are the filters which do their work automatically, and right bere is where the disease of the kidney first

Doing the vast amount of work which they are obliged to, from the slightest irregularity in our habits, from cold. from high living, from stimulants or a thousand and one other causes which occur every day, they become somewhat weakened in their nerve force.

What is the result? Congestion or stoppage of the current of blood in the small blood vessels surrounding them, which become blocked; these delicate membranes are irritated; inflammation is set up, then pus is formed, which col-lects in the pelvis or sac; the tubes are at first partially, and soon are totally unable to do their work. The pelvice Mac goes on distending with this corrup-tion, pressing upon the blood vessels. All this time, remember, the blood, which is entering the kidneys to be fil-tered, is passing through this terrible, dis-gusting pus, for it cannot take any other resula-

Stop and think of it for a moment. Do you realize the importance, nay the vital necessity, of having the kidneys in Can you expect when they are diseased or obstructed, no matter how little, that you can have pure blood and escape disease? It would be just as rea-sonable to expect, if a pest house were set across Broadway and countless thou-sands were compelled to go through its pestilential doors, and escape from contagion and disease, as for one to expect the blood to escape pollution when con-stantly running through a diseased kid-

Now, what is the result? Why, that the blood takes up and deposits this poison as it sweeps along into every organ, into every inch of muscle, tissue fiesh and bone, from your head to your lest. And whenever, from hereditary influence or othewise, some part of the body is weaker than another, a countless train of diseases is established, such as consumption in weak lungs, dyspepsia, where there is a delicate stomach; nervousness, insanily, paralysis or heart The heart must soon feel the effects of the

poison, as it requires pure blood to keep it in right action. It increases its stroke in number and force to compensate for the natural stimulus wanting, in its en-deavor to crowd the impure blood through theis obstruction, causing pain, palpitation, or an out-of-breath feeling. Unnatural as this forced labor is, the heart must soon falter, becoming weaker and weaker until one day it suddenly stops, and death from apparent "heart disease" is the verdict.

But the medical profession, learned and dignified, call these diseases by high sounding names, treat them alone, and patients die, for the arteries are carryin slow death to the affected parts, constantly adding seel brought from these suppora-ing, pus-laden kidneys which here in our ing, pus-laden kidneys which here in ou wash-bowl are very putrefaction itself and which should have been cured first

But this is not all the kidneys have to do; for you must remember that each adult takes about seven pounds of nourishment every twenty-four hours to supply the waste of the body which is constantly going on, a waste equal to the quantity taken. This, too, the kidneys have to separate from the blood

with all other decomposing matter.

But you say, "My kidneys are all right. I have no pain in the back."

Mistaken man! People die of kidney disease of so bad a character that the organs are rotten, and yet they have

never there had a pain or an ache! Why? Because the disease begins as we have shown, in the interior of the kidneys, where there are few nerves o feeling to convey the sensation of pair this is so we may never know.

When you consider their great work, the delicacy of their structure, the ease with which they are deranged, can you wonder at the ill-hearth of our men and women? Health and long life cannot be expected when so vital an organ is impaired. No wonder some writers

An Efficient Remedy

In all cases of Bronchis1 and Pulmonary Affections is AYES'S CHEERY PATOMAL. As such it is recognized and prescribed by the medical profession, and in many thousands of families, for the in many thousands of families, for the mst forty years, it has been regarded as an avanuable household remedy. It is a preparation that only requires to be taken a very small quantities, and a few does of it administered in the early stages of a cold or cough will effect a speedy cure, and may, very possibly, save life. There is no doubt whatever that

Ayer's Cherry Pectoral

Has preserved the lives of great numbers of persons, by arresting the development of Laryngitis, Bronchitis, Pneumonia, and Pulmonary Consumption, and by the cure of those dangerous maisdies. It should be kept ready for use in every family where there are children, as it is a medicine for smerier to all others in the chooping Cough, and the curr of Cous-ad Influenza, silments peculiarly inci-cural to childhood and youth. Prompti-ide in dealing with all diseases of this lass is of the utmost importance. The ass of a single day may in many cases, wail fatal consequences. Do not waste accious time in experimenting with nedicines of doubtful efficacy, while the nalsdy is constantly gaining a desper-noid, but take at once the speculiest and most certain to cure.

Ayer's Cherry Pectoral. PREPARED BY Dr. J. C. Ayer & Co., Lowell, Mass Sold by all Druggists.
