

MOTTO.

The following quaint words of old Robert Southwell, are worthy of being committed to memory:

"Shun delays, they breed remorse; Take thy time while time is lent thee, Creeping snails have weakest force, Fly their faults, lest thou repent thee, Good is best when soonest wrought, Lingering labors come to naught, Hoist up sail while gale doth last, Wind and tide stay no man's pleasure, Seek not time when time is past, Sober speed is wisdom's leisure, After-wits are dearly bought; Let thy fore-wit guide thy thought."

THE FRUIT GARDEN.—If large fruit is wanted, thinning assists. Strawberries are increased in size by watering in day time. Fruit should be allowed to bear only according to their strength. If a transplanted tree grows freely, it may bear a few fruits—but bear in mind, growth and great fruitfulness are antagonistic processes. Handsome forms are as desirable in fruit as in ornamental trees. No winter pruning will do this exclusively. It may furnish the skeleton—but it is summer pinching which clothes bones with beauty. A strong shoot soon draws all its nutriment to itself. Never allow one shoot to grow that wants to be bigger than others. Equality must be insisted upon. Pinch out always as soon as they appear, such as would push too strongly ahead, and keep doing so till the new buds seem no stronger than the others. Thus the food gets equally distributed.

Whether strawberries should have runners off, depends much on kind and soil. Free growing kinds may grow too freely in rich soils. Allowing them to exhaust themselves, and the soil by growing thick together is an advantage. Sayer growing kinds would not do well under such treatment. Most garden soils are rich; but on the whole, the most profitable and best plan, is the system of cutting runners off.

If there be any blackberry really earlier than Dorchester, it will be well for those who love this fruit to look out in time and satisfy themselves. They will blossom about the end of June in very early places.—Gardener's Monthly.

THE BEST GRAPE SETS.—In answer to a writer in the Horticulturist, who complains of the high price of what he calls basket layers of grape vines; Mr. Griffith, grape grower of North-east, Pennsylvania, says, "a good, strong, well-grown yearling plant can be grown for about ten cents, and as the cutting or bud (except of the 'new and rare' sorts) can be obtained for about a half of a cent, such vines ought to sell for something less than twenty cents. From an experience of more than twenty years, during which time I have grown some millions of grape vines, one hundred thousand of which I have fruited in my own vineyard, I am fully able to demonstrate that a well-grown one year old vine, produced from a single bud, in open culture, is the best and most valuable plant that can be grown."

To PURIFY WATER INSTANTLY.—A few drops of solution of permanganate of potassa, 2j to ʒj of water, will instantly remove the fetid odor of foul water, depending on organic impurities. The water of tanks and cisterns may be purified in this way on sight. The solution is equally efficacious to destroy the fetor of ulcers and gangrene. Its effect, however, in this case is transient, and the salt is wholly decomposed on its first contact with animal substances. The solution possesses a beautiful violet hue and changes the washings of suppurating sores to a blood red color. Farther than the transient action referred to it appears to have no effect, for good or evil.

HUNGARIAN YEAST.—The yeast prepared by the Hungarians will keep for a whole year. During the summer season they boil a quantity of wheat bran and hops in water; the decoction is not long in fermenting, and when this has taken place, they throw in a sufficient portion of bran to form the whole into a thick paste, which they work into balls, that are afterwards dried by a slow heat. When wanted for use they are broken, and boiling water is poured upon them; having stood a proper time, the fluid is decanted, and in a fit state for leavening bread.

A GOOD SIGHT OF AIR.—Few persons would credit the assertions that air can be seen, but it is true nevertheless. A practical philosopher shows that if on a windy day you hold the back of your saw horizontally at a certain angle, bring your eye to a level with the edge, and a little to the right, you will see the wind flow over it in waves. The experiment is best in a bright day.

WHETHER PETROLEUM CAN SUPPERSEDE COAL.—A recent authority on this subject says the notion of coal being superseded by petroleum as steam fuel is utterly fallacious. One might just as well expect to obtain a ton and a half of iron, from a ton of ore, as some of the results put forward by those interested in the matter.

SCRUBBING OF GAS.—We read in a recent report in a chemical journal that Mr. Livesey read a paper on a new mode of purifying gas. His method is confined to the removal of sulphuretted hydrogen, which he effects by scrubbing the raw gas with desulphuretted Ammoniacal liquor.

WHY ORCHARDS DETERIORATE.—Fruit trees, like every thing else whose sustenance is derived from the earth, are subject to decay, but by improper management they are often killed before their natural productive power is half exhausted. This is not the fault of the variety planted, the locality, nor the severity of the weather, except in rare instances, but of those who have the care and culture of them. The trouble generally arises from the want of thought or the cupidity of the owner. He plants an orchard, the trees perhaps twenty feet apart. In a few years, if they grow well, their branches will cover a large portion of the intervening space. But some ground is still unshaded, an orchardist thinks it is a pity that this should lie waste. The plow is introduced, and what is the result? Simply this; hundreds and hundreds of the small fibres, reaching out from the main roots in search of sustenance for the trunk, are severed; their absorbing and conducting power is destroyed, and the trees and branches, sustained by their active functions, wither; it ceases to yield its wanted burden of fruit, and, after a few years of languid life, permanently decays.

The truth is, the farmer asks too much of his soil; wants it to impart vigor and fruitfulness to from fifty to eighty trees to the acre, besides giving him a crop of corn and potatoes annually. To secure the last he cuts the thousands of fibres of his trees with the plow, and then wonders why his orchard decays and dies prematurely! This is bad policy and poor practice. Do not ask too much from the soil. Give it a chance to nourish and sustain one product to a full development, rather than by a multiplication of them, to secure stunted samples of immature ones. The earth, properly manured and tilled, is sufficient in its gifts to man, but when over tasked by a multiplicity of exactions its response to his labors will be feeble and unsatisfactory.—Rural New Yorker.

SAVE THE FERTILIZERS.—Much matter of a fertilizing character is suffered to go to waste on farms for the lack of a little care in gathering, preserving and applying it to the soil. Being distributed in small parcels at various points, it is regarded as of little consequence, but if brought together the several amounts would assume an importance which the separate parts failed to indicate. If the parcels of manure one frequently sees about sheds, hog pens, hen roosts, door yards and the like, were carefully gathered and applied to the farm and the garden, the products of each would be materially increased, while the cost of the gathering and application would be fully repaid by the superior healthfulness resulting from their removal. When this refuse matter is not in a proper state for immediate use, it should be gathered into heaps for fermentation—the masses being augmented from time to time, as material accumulates, till the preparation of the wheat ground shall call for its application. Save all, should be the ruling idea with the farmer. Rural New Yorker.

SALT FOR FATTENING SWINE.—A correspondent of the Annalen des Landwirthschaft, states some interesting experiments to test the use of salt in fattening swine. He selected two pairs of barrow hogs, weighing 200 pounds apiece. One pair received, with their daily allowance of food, two ounces of salt; the other pair, similarly fed, none. In the course of a week it was easily seen that the salted pair had a much stronger appetite than the others, and after a fortnight it was increased to two ounces apiece. After four months the weight of the salted hogs was 350 pounds each, while that of the unsalted, five weeks later, reached only 300 pounds. The experiment was repeated with almost precisely the same results. The author feeds young pigs, according to their age, a quarter of an ounce daily; breeding sows very little during pregnancy, and during the heat of summer withholds it in a great degree from all, as it induces thirst and liability to disease.

INFLUENCE OF WOODED DISTRICTS ON THE DESCENT OF RAIN.—M. Becquerel and his son have laid before the French Academy the results of several observations conducted in the environment of Montargis. They conclude that wooded districts draw down a larger amount of rain than plains. Remembering the fact that when the clouds approach a mountain, or even a simple hill, they ascend and then meeting a colder stratum of air become converted into rain, one is led to think that lofty woods may have the same effect. This view the authors tested by establishing five observatories in the district named, of the rainfall. They found that far more falls in the wooded than in the unwooded district.

RATS AND MICE.—The asphodel, a perennial plant cultivated for the beauty of its flowers, is said to be very useful in driving away rats and mice, which have such an antipathy to this plant that if their holes be stopped up with it, they will rather die than pass where it has been placed. Who can furnish us with a little of it?

UREA.—Quantities of urea are now found in the milk of herbivorous animals. The same substance has also been found to have exuded upon the skins of patients in certain diseases.

Fall and Winter Importation

1866 and 1867 AT THE OLD STAND, Main Street, Oregon City, J. R. RALSTON.

JUST OPENING AND RECEIVING from San Francisco a splendid assortment of STAPLE & FANCY DRY GOODS.

C. M. KESTER, THE PEOPLE'S FRIEND! Perry Davis' Vegetable Pain Killer!

Wonderful Cure of the Rev. D. L. Brayton, Missionary in India, who was stung by a Scorpion. Oregon City Oregon. Extract from his letter, published in the Baptist Missionary Magazine.

"For the first time since I was in India, I have been stung by a scorpion. I went out this morning to my exercises, as usual, at early dawn, and I was stung by an old box, on taking off my coat. I put my hand on a scorpion, which immediately rent the skin by thrusting its sting into the palm of my hand. The instantaneous and severe pain, which darted through the system is quite incredible; what an awfully virulent poison their sting must contain! I

was in the Legislature. Yours, &c. HUGH GORDON. THE PEOPLE'S FRIEND!

PEACE! PEACE! TO THE POOR INVALID—NOTHING IS more pleasing.

CANCERS—One of the most torturing diseases on earth, conquered and eradicated without the use of instruments by DR. WM. HENLEY.

Nine-tenths of the diseases prevalent in this climate are caused in the first place by Bad Colds and Coughs. I have one of the greatest preparations for the Cure of Coughs, Hoarseness, Whooping Cough, Bronchitis, Soreness of the Chest, ever before offered to the human family. A troublesome Hacking Cough it will remove in a few days.

References—Judge Marquette, M. DeWitt, store keeper, C. H. Hill, and many others. Any person wishing any of my Salves, Ointments, Fever and Ague Pills, or Cough Medicine, can get them at the Dispensary, corner of Jefferson and Fifth streets, Portland, or by addressing DR. WM. HENLEY, Oregon.

Read the Following: Clatskanie County, October 15th, 1866. I would inform persons laboring under Cancer, that my wife has for a number of years had a cancer on her left breast, until the three years last past, when it commenced growing, slowly at first, but during the past summer its progress became more rapid. It was giving her considerable pain, when, on the 17th of last month she went under treatment by Dr. Henley of Portland. By his method of treating the entire cancer was removed from the sound flesh, and on the 25th of the same month it came away without pain. The sore is fast healing up, and I hope a complete cure is being effected. Her suffering for the first 24 hours under treatment was considerable. She has suffered but little since, and is now entirely free from pain.

Dr. Henley. The above is at your service, to publish if you think proper. I direct to you and to Mr. Starckweather. Should you be the first to get this please let him see it. If you do not know him please enquire. He is in the Legislature. Yours, &c. HUGH GORDON.

THE Electro-pathic Institute, 645 Washington Street, San Francisco, California.

J. H. JOSSELYN, M. D., Resident Physician. THE DIRECTORS of this CELEBRATED Medical Institute wish to thank the public for the generous manner in which they have sustained the Resident Physician with their patronage. It is now six years that time there has been over thirty thousand consultations, and in all cases, where the disease was curable.

Great and permanent cure has been performed. Malicious charlatans have opened traps in close proximity to the Institute, adopting similar names, hoping to attract the patronage of the Electro-pathic Institute. The undersigned, however, is perfectly apparent—for the business has not been effected in the least, but has gone on increasing its usefulness and profits regularly. The Resident Physician has been, by careful study and experience within the last few years, successful in discovering new electric remedies which are far superior to any before used in the treating art, and he can warrant them to cure all cases for which they are used, or make no charges for services. They will be forwarded to any place in the Pacific States upon a receipt of a letter stating the disease with symptoms, the age and sex of the patient.

The Female medicines, discovered and used by the Resident Physician, are the only remedies which are so successful in curing the disease. The large number of cases in which they have been used, is a guarantee of their success.

Great care should be taken in visiting the Institute, to remember the name. Electro-pathic Institute, 645 Washington Street, between Montgomery and Kearny streets. J. H. JOSSELYN, M. D., Resident Physician.

Below are a few of the opinions of the press of California, which are submitted to the Public:

ELECTRO-PATHIC.—The readers of this article are particularly requested to read the advertisement of the "Electro-pathic Institute," 645 Washington street, San Francisco, to be found in another column of this paper. The remarkable cures that have been effected by Dr. J. H. Josselyn, the Resident Physician of the Institute during the past five years, has gained for this establishment a reputation that has never been equalled by any medical establishment on this coast. In cases of female irregularities, especially, Dr. Josselyn has gained an enviable reputation, and the spacious parlors of the Institute are continually occupied by ladies seeking relief from their troubles.

Dr. Josselyn pays particular attention to the treatment of the interior of the State and upon receipt of a full description of the disease of which the applicant is so unfortunate as to be afflicted, accompanied with a return of the patient's address, sends per Wells, Fargo & Co., medicines that he warrants to cure the disease, without the slightest injury to the system. He uses no mercury or other poisonous substances, and his remedies are known as "Electric," and most of them are of his own discovery. Persons placing themselves under the treatment of Dr. Josselyn, are guaranteed to receive only receiving correct and successful treatment, but upon his discretion and secrecy.—Red Bluff Independent January 24th,
