'Twas bright, 'twas heavenly, but 'tis past Oh! ever thus, from childhood's hour, I've seen my fondest hopes decay; I never leved a tree or flower But 'twas the first to fade away. I never nursed a dear gazelle-To glad me with its soft black eye, But when it came to know me well, And love me, it was sure to die! Now, too-the joy most like divine Of all I ever dreamt or knew, To see thee, hear thee, call thee mine, Oh misery, must I lose that too? Yet go! On peril's brink we meet;-Those frightful rocks-that treacherous sea; No, never come again-tho' sweet, Tho' heaven, it may be death to thee!"

This passage contains one hundred and twenty-seven words, one hundred and ten of which are monasyllables, and the remainder words of only two syllables. The sentiment embodied throughout is that of violent mental emotion ; and the passage box. The purchasers' names will be written affords a striking illustration of the cor- on as many separate ballots as they have subrectness of the theory that, " the language of passion is almost invariably broken and abrupt.

France has constructed a furnace of great | until all are drawn. The record of the drawheating power. It consists of a flame ing will be certified by the committee of of coal gas, inclosed in a chamber of officers, and warranty deeds will be immediiron-conductors, into which a jet of oxygen gas is blown. In this way only the
material required for perfect combustion
is admitted thus obviously the objection gen gas is blown. In this way only the is admitted, thus obviating the objection to the use of common air which involves the necessity of introducing into the fur- of several parcels of land, with an agreement nace with every volume of oxygen four to treat them as of equal value for the pur volumes of inert nitrogen. When cold air is used, part of the heat generated by oxygen is wasted in heating the nitrogen; it has therefore been found highly advanlime and subjected to the flame is easily year before.

On the two points between which ships melted. About one cubic foot of coal gas in the Deville furnace has been estimated to be over 14,000 degrees Farenheit, or to melt cast iron.

Rendus contains some new researches by H. Violette on these resins, which previously had been found soluble in ether, turpentine, benzole, petroleum and other already immense. It will never cease, nor hydron carbons, as well as vegetable oils, only after losing about 25 per cent of their weight by distillation. Violette's and river boats must come to her wharves experiments show that these resins, heated five States. Three regular lines of steamin a closed vessel at a temperature be- ships are now employed, and at certain seatween 350 and 400° C, or 662 and 752° Fahr., acquire after cooling, without los- extend their voyages inland a hundred miles ing any of their weight, the property of to Portland, in pursuance of a habit natdissolving, hot or cold, in the above named | urally formed when trade was confined to liquids, and forming excellent varnishes. the Willamette river, on which Portland is He finds also that Copal resin, heated as stated, under pressure, with one third of drying linseed oil and one-third of essence of turpentine, gives directly, with- their voyages at Astoria, and leave the inout loss, a rich, clear limpid varnish of a beautiful slightly lemon color, perfectly | tieth part their cost. Portland, it is hoped, adapted for carriages, and for the inside | will not be injured by the change, but reas well as the outside of rooms, where lieved from the fear of injury. But, whatdelicate painting is required. Under the ever happens, the prosperity of Astoria is sure double influence of heat and pressure this ⊕resin acquires new properties. Manufacturers who would take advantage of this discovery, must bear in mind the retort used will be subject to a pressure of at many times its present value. That it is ofleast 300 lbs to the square inch.

R. S., in his tenth lecture on Chemical Geology-after describing an experiment Daubree, who subjected fragments of firwood, in a close tube with water, to a high temperature and pressure, and thus transformed the wood into a black mass | cause the sales to citizens, for actual improvehaving a bright luster and resembling ment, at full prices, at the rate of three to anthracite—proceeds to say: It has long five thousand dollars a year, on time, as herebeen supposed that bituminous coal is converted into anthracate simply by application of heat; but something more than this is required to satisfy the conditions. for if it were simply a matter of heat we ought to get, not anthracate, but coke, also a proportionate increase in the quantity of fixed organic matter, or ash, in the coal. It seemed to him there must have been some other condition obtaining in order to account for the converstion of bituminous coal into arthracite. He believed that water played an important part in this conversion, that anthracite has been the result of thermohydric or hydro-thermic action; and that water has extent the inorganic matter or ash.

STREWGTH OF GROWING TREES .- An En-Tish paper says Walton Hall had at one time its own corn mill, and when that inconvenient necessity no longer existed. the mill-stone was laid by in an orchard and forgotten. The diameter of the cirocular stone measured five feet and a half, eter of eleven inches. By mere accident, some bird or equirrel had dropped the fruit of the filbert tree through this hole on to the earth, and in 1812 the seedling was seen rising up through the unwonted was speculated upon by many. Would the filbert tree die in the attempt? Would it burst the mill-stone? or, would it lift it? In the end, the little filbert tree lifted the mill-stone, and in 1863 were it like a crinoline about its trunk, and Mr. Waterton used to sit under the branching shade.

SLEEPING FLOWERS.—Almost all flowers sleep during the night. The marigold goes to bed with the sun, and with him rises weeping. Many plan's are so sensitive that their leaves close during the passage of a cloud. The dandelion opens at five or six in the morning; the daisy opens its day's eye to meet the early beams of the morning's sun. The crocus, tulip, of Astoria scems inecitable, and must more and many others, close their blossoms at than keep pace with the development of her different hours toward evening. The ivyleaved lettuce opens at eight o'clock in the morning, and closes at four in the afternoon. The night-blooming cereus turns night into day. It begins to expand its magnificient sweet-scented blossoms in the twilight; it is in full bloom at midnight, and closes, never to open again, at the dawn of day. In a clover field not a which seem to be awake all night are styled " the bats and owls of the vegetable king-

HICKORY NUTS How To PLANT .- " How can we grow hickory nuts? They have been tried here and failed. The timber is much needed here." Gather the nuts, ied over half an inch deep, in wood mold, many fold. Not a ticket but will draw a fiftyoff the squirrels, rats and mice, you are in danger of losing rouse of the squirrels of them will draw prizes of two, four and six lots each, or a lot kept moist in sand or moss, till Spring. | a number thank try his luck,

ASTORIA LOT SALE.

The proprietor of the town of Astoria, in order to pay his debts and carry forward his improvements, offers to the public the greater part of the unsold lots within the corporate limits, on terms that will arrest attention and tempt investment.

The property will be divided into six hundred parcels, and distributed among the purchasers by lot. One-half the parcels will be single lots, no one of which is worth less than \$50, and many of them are worth \$75 and \$100 each, at the present selling rates. The other half will be prize parcels of two, four and six lots each, and single lots ranging in value from one hundred to six hundred dollars, and one house and lot valued at one thousand dollars, and one new cottage residence of eight rooms (not all finished), with stone cellar under the whole, together with three lots, all as one parcel, valued at five thousand dollars. All the parcels will be sold at one uniform price of fifty dollars

As soon as the shares are all taken, the distribution will be made by a committee, consisting of the County Judge, County Clerk and Sheriff, and if either of them i absent, the others will choose a person to fill the vacancy. The numbers of the lots composing each parcel will be written on seperate ballots, and sealed up and placed in a scribed for shares, and sealed up and placed in another box. The boxes being well shaken, a ballot will be drawn from each and the name and the description of the prop DEVILLE'S FURNACE.—M. Deville of and then another will be drawn and recorded, patent certificate under the Donation Law. This is not a lottery, but a joint purchase pose of distribution, and to assign them by lot, as a Court would make partition.

Situate in the mouth of the Columbia river, at the only spot where a town can be built with a harbor of sufficient capacity to shelter tageous to apply the waste heat of the a large amount of shipping, and accessible furnace in raising the temperature of the by both ocean ships and river boats in all air which feeds the flame, thus forming | weathers, Astoria can have no rival as the what is technically called the hot blast, enterpot for the commerce of the river. The use of pure oxygen is not ecomomical. | Rival towns have been projected, but scarcebut where a very high temperature is re- ly the ruins of a house now mark their sites quired, it is indispensable. In Deville's | -while Astoria has grown steadily up to the furnace, platinum, the most refractory of condition of a respectable little city, and inthe elements, when placed upon a bed of creases faster every year than it did the

and one of oxygen will reduce one pound | Hancock, in full view of the town, with their of platinum. The temperature generated wharves, warehouses, barracks and officers' quarters, each a respectable village, where the Government has entered upon a a series about five times higher than that required of works, which, with their garrison, will involve the disbursement of millions of dollars. And, considering that this is the gate to an interior country of three embryo States CALCUTTA COPAL RESINS. - The Comptes besides Oregon, all glittering with veins of gold and silver, no expense is likely to be spared in guarding it. The travel and traffic between that region and San Francisco is cease increasing. And there, at the gate, and river boats must come to her wharves sons extra trips are made. At present, they situated. But the reasons for it are dimin ishing, and the reasons for changing it are increasing; and it is generally believed that very soon the ocean steamers will term; ate land carrying to river boats of but a twen-It is now exhibiting a greater proportionate increase in building, business and wealth, than any other town on the Pacific coast No real estate is so sure of a constant advance, and none so likely to take a sudden rise to fered for sale at home, among those who know it best and who can appreciate the lib ORIGIN OF ANTHRACITE .- Dr. Percy. F. erality of the offer, proves that it possesses all the value and advantages attributed to it. and presents a tempting opportunity for either speculation, or investment. Why, then, is the offer made? Why is the property put into a raffle at prices which average less than half the selling rates? Only be-

> provements and enterprise which he has in The following extracts from a letter published in the New York Independent, of Sep-tember 27th 1866, from Prof. Wood, who made the tour of the Pacific States last summer, gives the impressions of a sagacious

tofore, is no longer adapted to the circum-

stances of the proprietor, who has become an

invalid, and must hasten to complete the im-

and impartial stranger: ASTORIA, OREGON, Aug. 11th, 1866. "I write from this renewned place. Astoria stands upon the left bank of the Columbia, ten miles from its final commingling with the ocean. A narrow interval of level ground, from tide to bluff, say two miles in length by two furlongs in width, affords a in some way or other removed to a large | convenient and pleasant footing, for at present, about seventy white buildings, including custom house, court house, hotels, stores, shops and dwellings. Several fine dwellings also stand high upon the hills in the rear, enjoying a landscape in front of marvelous beauty. Astoria enjoys a climate of remarkable salubrity. Diseases may exist, but I hear nothing of them; and the atmosphere, perfumed by the vast conferous forests, or purified by the expanse of the waters of the Pacific, brings only health and vigor to these while its depth averaged seven inches Pacific, brings only health and vigor to these throughout; its central hole had a diamvalids and tourists from the interior, in search either of health or recreation. It is occupied and controlled by a population chiefly of New England origin. They maintain an efficient public school, now under the direction of a graduate of Yale, for the

channel As its trunk gradually grew through this aperture and increased, its power to raise the ponderous mass of stone ically, which should entitle her to supremacy in commerce, as the New Orleans of the Columbia; and the Astorians maintain that she is yet destined to attain it. At present, however, Portland is the undoubted metropotis, a city located one hund ed miles above this, not on the Columbia, but on its chief tributary, the Willamette. This is an anom-aly yet readily explained. The valley of the Willamette is by far the largest and best agricaltural district in the State, and Portland is us mart; while the region back of Astoria is yet forest, with only here and there a small section subdued. For this good reason, at present, Astoria has less than 1,000 son, at present, Astoria has less than 1,000 package, to suit purchasers. Also, a fine lot inhabitants, while Portland has 8,000; and of OLD OTARD ERANDY, by the gallon. for the other good reason, its commanding position, this little city is the only port of entry for the State. The future importance

agricultural resources." The seventy houses estimated by Prof. Wood were at that time more than a hundred, and since then the largest and most costly stere in the town has been built, and a church, steam saw mill, brewery, and one of the best tanneries on the Pacific coast, together with wharfing and the usual addition of dwellings and other buildings. Another church is to be built next season, and a numleacopens till after sunrise. Those plants | ber of houses are under contract. Each summer the carpenters are overtasked. Next season the demand will be greater than ever. Workmen of all trades are greatly needed. This is their opportunity, this is everybody's opportunity; every person should own some property at the seaport and summer resort of Oregon. To improve and use, there is none so eligible for heath, schools and profitwhen mature and dry enough to eat. for profit, none will give so great an advance They must not get entirely dry before on cost. As a means to lay up money for the they are planted, and must not be bur- future, no other is so safe, or will return so
