Forty good teams for hauling lumber. Price \$1.50 to \$5.00 per M. B., owing to distance. Work will continue until rainy season. Write to  
The Sugar Pine D. & L. Co.,  
Granta Pass, Oregon.

**BEEF SUGAR AT LAGRANDE.**

The importance of the industry to the people of Oregon.  
The manufacture of beet sugar from the sugar beet, now being established at La Grande, promises to be an industry of great importance and value not only to the immediate vicinity, but to the entire state; for if this enterprise proves to be successful, other factories will follow in the immediate future. The success of this enterprise may now be considered as beyond question. The men who are engaged in it are not mere theorists, but men of experience in the business, having carried on the manufacture of beet sugar at other points for a number of years.  
Their confident assurance of success is manifested by the construction of an extensive and most substantial plant costing some \$400,000.  
For some years experiments had been made by the farmers of the Grande Ronde valley in the cultivation of the sugar beet, showing that the soil and climate was well adapted to its production. Specimens were sent to Washington, Corvallis and other places for analysis, which gave surprising results.  
Prior to 1897, 30 analyses of beets from Union county had been made by Professor Shaw, of the Agricultural College, at Corvallis, "which," he says "showed exceptionally high average of 186 per cent. sugar in the juice, and 85 per cent. purity." During 1897 these experiments were continued with greater care and circumspection. In Bulletin No. 58, of the Oregon Agricultural experiment station, Professor Shaw reports the results of 29 analyses of sugar beets from Union county in 1897, with the following average results: "Sugar in juice, 17.33; sugar in beets, 16.7; purity, 88.5." In speaking of these analyses, Professor Shaw says "the range of these 29 analyses was from 13.2 to 20.9 per cent sugar in the juice and a purity of 72 (the only one below 83) per cent, to 94 per cent. The calculated yield ranged from 12 to 33 tons per acre. The average of results was 11.3 pounds beet with 17.5 per cent sugar in the juice and a purity of 88.5 per cent, and a yield of 23.7 tons per acre. While there was but one sample of the beets analyzed that would have brought less than \$1 per ton at the factory, there was 27 per cent, that would have brought \$5."  
In speaking further of the advantages offered for the establishment of a sugar factory in Eastern Oregon, Professor Shaw says: "I doubt if there is in the entire United States a location superior to La Grande for a sugar factory. Well distributed about, are 200,000 acres of most excellent land of exceptionally uniform texture and composition, deep and fertile, abundance of water and fuel, limestone of excellent quality easily obtainable, located on a railroad which realizes the importance of the industry. These will be hard to surpass."  
In speaking of the advantages resulting from the introduction of the culture of the sugar beet and the manufacture of beet sugar, Professor Shaw says:  
"That the development of any industry which pays the farmers of the community immediately surrounding the factory, \$100,000 or more per year in cash for a crop which may be added to and not substituted for any now being produced; which introduces a crop suitable for rotation with grasses, legumes and grains, and which is not exhaustive to the soil; which urges under intensive cultivation each year 3700 acres of land or more; which returns to the farmer at a very low cost a most excellent stock food, both for beef and dairy purposes, which uses during the working season 7000 or more cords of wood; which uses at least three car loads of limestone each 24 hours; which adds to the food of our people 35 tons per day of a finished product, having practically a local market; which renders it necessary to subdivide large areas now almost exclusively devoted to wheat growing, supporting many families where now but one is supported; that the development of such an industry is a matter of public importance so great as to be beyond measurement, needs no argument."  
With this data before it and fully impressed with the immense benefits to be derived from the undertaking, the Commercial Club of La Grande in the latter part of 1897, made a determined effort to secure the establishment of a sugar beet factory near their town. Two conditions were necessary to secure the result. The raising of a subsidy of \$80,000 and contracts with the farmers for 3500 acres in sugar beets each year for five years. These conditions being complied with the establishment of the factory with a daily capacity of 350 tons of beets was assured.

The home consumption at 66 pounds per capita would require 1,056,000 pounds, leaving for sale to outside markets 4,944,000 pounds of the value of \$247,200, besides the value of the by products. Stated in another way, the people of Union county, instead of paying out this year \$50,000 and more for sugar, raised out of the sales of other products, will practically produce their own sugar from their own beet fields and have sugar to the value of \$247,200 to sell to their neighbors. Instead of being \$50,000 short on sugar, they will be long with a cash product on hand by the amount and value of this surplus product. And that, too, without in any way diminishing the output of other products.

The plant when completed will be one of the largest in the United States, possessing all the latest improvements and devices for the manufacture of sugar from beets. The design is for a plant with a capacity, when fully completed of 700 tons daily. The first year or so it will have only a capacity of 350 tons daily. Space being provided in the main building for the additional machinery to bring it up to its designed capacity.  
The plant is located on a tract of 100 acres just outside of the corporate limits of the city of La Grande. The main building is 280 feet long by 60 feet in width, two and three stories high. The entire interior structure except the covering of the floors is of structural steel, the whole enclosed in brick.  
North of the main building is the lime kiln and boiler house, 160 feet long and 40 feet wide. East of the main building is the warehouse 150 feet long and 60 feet wide, in which the refined sugar will be stored. West of the main building are five beet sheds for the reception of beets, as they come from the farms, each shed being 350 feet long and 24 feet wide.  
The lower part of these sheds is "V" shaped, the "V" being open at the bottom and underneath the opening the entire length of the sheds is running water in a trough of uniform width, depth and grade, into which the beets are dropped and carried by the water into the factory.  
To the north of the main building, lime kiln and boiler house is the silo 400 feet long by 80 feet wide and 12 feet high at the sides in which will be stored the beet chips after the sugar has been taken from them, to be fed to cattle. The lower floors of the main building, warehouse and lime kiln and boiler-house are all laid in concrete. The entire plant will be lighted with electricity generated on the premises. The machinery will be propelled by steam power, the main engine being 150 horse power.  
From the time the beets drop into the water under the beet sheds until the refined sugar drops into racks at the other end of the main building, and the chips drop into the silo for cattle feed, everything is done automatically by machinery and when the factory is in full operation it requires about 24 hours to complete the process. The output will be about 35 tons of refined sugar or 700 sacks of 100 pounds per day of 24 hours.

THE PROCESS.  
The beets are carried into the main building by water and dumped into a revolving wheel elevator, having a wide perforated rim, which receives the beets in buckets attached to the inside of this revolving elevator, from which, as the elevator revolves, they are thrown by gravity into a chute which delivers them into a beet washer where they are cleaned of all adhering dirt and drop-

Love is the sun of woman's life. It dawns in the maiden's tender sentiment; it brightens into the steady affection of the contented wife, and reaches its glorious noon in the happy mother's loftiest ambition. Her highest pride is in her fitness to fulfill this grand and sacred destiny. Nothing so clouds and darkens her existence as to be incapacitated for this noblest of womanly functions by weakness or disease.  
A woman who suffers from any ailment of the delicate special organism of her sex, feels something more than pain and physical wretchedness. She is mortified with a sense of womanly incompleteness.  
But no woman need remain under this cloud of misery and dissatisfaction. Dr. Pierce's Favorite Prescription positively cures all diseased conditions and weaknesses, and restores complete health and strength to the feminine organs.  
It is the only medicine of its kind devised for any one purpose by an educated and experienced physician, and eminent specialist in this particular field of practice.  
It is the only medicine which can be relied upon to make the ordeal of motherhood absolutely safe and almost painless.  
"I cannot say too much for Dr. Pierce's Favorite Prescription," writes Miss Clara Baid, of Bridgeport, Montgomery Co., Penn'a. "I feel it my duty to say to all women who may be suffering from any disease of the womb that it is the best medicine on earth for them to use. I cannot praise it too highly for the good it did me. If any one doubts this give them my name and address."  
Dr. Pierce's Pleasant Pellets regulate the stomach, liver and bowels. Of all medicine
