Texas Itch or Mange.

Mange is caused by an itch mite which inhabits the horse, ass, mule or steer, and may migrate to man, where it may thrive as well. An old bullefin of the Minnesota experiment station of the Minnesota experiment station says that, though very small, it can be readily detected moving along the scurf of an infacted skip, if a strong manuful of an infected skin, if a strong magnifying lens is used. It forms small galler- part. Try it and you will be rewarded for your trouble. ies beneath the scurf skin, in which it

hides and multiplies. If the hide of an infested horse is wurmed by the sun or
