Raold Amundsen, the Norwegian explorer who accomplished the Northwest Passage last year, is credited with the further achievement of having located the north magnetic pole. (See black star on left of the map.) He has definitely fixed the position of this pole in King William Land, not far from the position ascribed to it by Sir John Ross in 1831. In commenting on Amundsen's achievement the National Geographic Magazine said: "The new knowledge which his observations will give us of the character and influence of the magnetic pole will prove of immense value in the study of magnetic variations. Magnetic deviation of the needle is one of the principal uncertainties with which mariners have to contend. Terrestrial magnetism is a mysterious force. Nearly every year we have a magnetic storm, which interrupts our telegraph wires several hours. Whence it comes or what it is we know not. The eruption of Mont Pelee was accompanied by magnetic waves, which were simultaneously recorded in Hawaii, Alaska, the United States and Europe. All this makes the magnetic work of Amundsen particularly valuable, and we must remember that was the main object of his expedition.

Popular Gence

The banana and potato are almost identical in chemical composition.

There are no undertakers in Japan. When a person dies his nearest relatives put him into a coffin and bury him. The mourning does not begin until after burial.

India rubber trees which are tapped every other day continue to yield sap for more than twenty years; and it is a curious fact that the oldest and most frequently tapped trees produce the richest sap.

The most costly leather in the world is known to the trade as the plano leather. The secret of preparing this is only known to one family of tanners in Germany, though the skins from which it is tanned come almost entirely from America.

Poisoning from gas inhalation is now added to the recognized dangers of ballooning. The hydrogen-itself nonpoisonous-is often contaminated with arsenic, selenium, and antimony, and fourteen cases of ill effects have been reported to the French Academy of Medicine. In one of the two forms of poisoning death results in two or three

little known field of exploration since into the city hall from the School street the invention of a young naval engikind of metal armor with a special chemical combination for providing res- the salutation: "How are you today, this dress he has succeeded in sinking 336 feet, a much greater depth than island in Bolinas Bay, 30 miles from has ever before been reached by any diver.

To tell the points of the compass by a watch, point the hour hand at the sun; then south is halfway between the hour hand and the figure 12 of the dial. To measure an angle by a watch lay the scene of the rioting, and many two straight-edged pieces of paper on workmen have been trampled under the angle, crossing at the apex. Holding them where they overlap, lay them The California earthquake revealed on the face of the watch, with the apex minutes of the dial, each minute being 6 degrees of arc. It is easy to measure within 2 or 3 degrees in this way.

A special department of the Each side claims a majority of the work will be devoted to the study of the underground water of that State, in order to determine the limits of Senator Morgan has a plan for the what are called the "Artesian basins," and the various depths to which it may be necessary to penetrate in different localities to obtain good water for muthe waters will be carefully analyzed and subjected to laboratory tests, and thus it is hoped that the work of developing new water supplies will be put upon a thoroughly scientific footing.

A recent English traveler in China describes some remarkable examples of sounding stones, or "stone gongs," which he saw at Chufu, the birthplace and burial place of Confucius. One of the stones, which are composed of a grayish colitic limestone, has been shaped into a cover for an incense dish placed in front of the tomb of the grandson of Confucius. When struck with a stick, or with the knuckles, it rings like bronze, and the sound is so distinct that it is difficult to believe, without inspection, that the object is not really composed of metal. Sounding stones are known in other countries. A correspondent of Nature describes a bridge at Corick, in County Mayo, Ireland, which is locally known as the 'musical bridge," because the stones forming the coping give out a musical note when struck.

MILEAGE OF THE HUMAN BLOOD. One Little Red Corpuscie May Travel 168 Miles in a Single Day.

The speed at which the blood circulates in the veins and arteries of a healthy man is something surprising. All day long, year in and year out, the round trips continue from the heart to the extremities and back again. The red blood corpuscles travel like boats in a stream, going to this or that station for such service as they have to perform; and the white corpuscles, the phagocytes, dart hither and thither like patrol boats, ready to arrest any con-

traband cargo of disease germs. The mileage of the blood circulation reveals some astounding facts in our personal history. Thus it has been calculated that, assuming the heart to beat sixty-nine times a minute at ordinary heart pressure, the blood goes at the rate of two hundred and seven yards in the minute, or seven miles per hour, one hundred and sixty-eight miles per day and six thousand three hundred and twenty miles per year. If a man of 84 years of age could have one single blood corpuscie floating in his blood all his life it would have traveled in that same time five million one hundred and fifty thousand eight hundred and eight miles.

Funny He Didn't Remember.

One day last week Mayor Fitzgerald, as busy as the three bees that he is New wonders may be expected in a trying to make Boston, came tripping entrance. In the corridor he was met neer by the name of De Plury, of a by a seedy-looking individual who held up his honor, put out a grimy paw with response, as he grasped the hand of the unknown.

"You don't seem to know me, do you, Mr. Mayor?"

"Well, to be candid with you, I cannot say that I do, but I am glad to meet you."

"Don't you remember the day you were elected?"

"Well, I ought to," said the mayor. "Just think a bit what you did that night. Don't you remember that you went down to the Quincy House to meet your friends?"

Sketches Nova Zembia

Alexander Alexewitsch Borissoff has started from St. Petersburg on a tour abroad with twenty-six oil paintings and sketches which represent the outcome of a voyage to Nova Zembla undertaken toward the end of the ninetles at the expense of the Czar. In 1896 he made a trip to Nova Zembla, bringing back with him a series of remarkable sketches. In 1899 he built the yacht Meczta (The Dream), in Archangel and salled in her to Nova Zembla, where he erected a shelter with wood he had brought, and finished many sketches of Matotschi Sebar (the straits dividing Nova Zembla) and also of the Carle Sea. During the winter pastel drawings or charcoal sketches only were possible; in spring brush and palete could again be used. -London Sphere.

Did Not Need to Propose. "He's so bashful that he never could propose to a woman."

"Oh, I guess not. He's married, you know."

"Yes, but he married a widow, didn't he?"-Cleveland Leader.

"Everything," says every woman complainingly when getting a meal ready for company, "has to be done at the last moment."
