o succeed these days you ust have plenty of grit, coure, strength. How is it with e children ? Are they thin, ale, delicate? Do not forget Yer's Sarsaparilla. You now it makes the blood pure d rich, and builds up the eneral health in every way.

Owing to the great amount of decomposed vegetable matter contained in Brazilian waters, which causes rapid deterioration of thin steel, the hull of the new dispatch boat Guanabara, built for the Brazilian Government, is constructed entirely of bronze: Against has no effect, and, although more costly, both in material and construction, the vessel is much lighter than if built of steel or wood. The propeller shafting and propeller are also of bronze.

The brownish spots which appear in old books are really due to the ravages of bacteria, says Popular Mechanics. The tiny destroyer is especially fond of starchy material and its propagation is promoted by damp. It has been well understood that damp produced discoloration and decay, but the share of the microbe in the operation has not bitherto been suspected. Tiny fungus or mold is responsible for gray and black marks upon old papers. In spotting the surface the fungus helps to break down the fabric and hasten the process Danish population annually sells in the of its destruction.

R. Lydekker, the English naturalist, calls attention to the observations of R. I. Pocock on the significance of the tity of butter mentioned, Denmark spots on lion cubs as indicating the close relationship of lions, tigers and leopards. On lion cubs the pattern of the markings is intermediate in character between the stripes of the tiger and the rosettes of the leopard, but inclines more toward the former. East African lions retain more or less distinct traces of these early markings even when they reach maturity. A distinct tiger-like feature of the ilon cub is a white patch over the eye, which disappears in the adult. Puma cubs show a pattern quite unlike that of the competition with similar products from lion, tiger, leopard and Jaguar.

At the recent meeting of the American Association for the Advancement of Science, in Chicago, attention was called to the interesting fact that the increased their exports from \$1,000,000 work on the Panama Canal is changing to \$40,000,000. In the same twenty biological conditions in Panama, and that its completion will enable the fresh-water faunze of the Atlantic and Pacific slopes to intermingle. Undoubtedly many marine animals will pass from one ocean to the other. Thus a cheese and put the New York stamp on permanent change of conditions will be it to get one cent more in the English brought about, which may or may not market. Today the New York farmers possess much practical importance, but its scientific interest is very great. In view of these facts, the association reis-This is Jack's latest picture, solved to urge upon Congress the necessity of an immediate biological survey with American education, Dean Russell of the Panama Canal zone.

DAIRYING IN DENMARK.

Land Worked for Hundreds of Years Still Beats Ours.

That American farmers and promoters of agricultural industries are rather lax in grasping their opportnuties, and are in danger of being outgeneraled in the markets of the world, unless they improve their methods, is the belief of Dean James E. Russell, of Columbia University, New York. Dean Russell was recently a visitor at the state colthis metal, says Popular Mechanics, the lege, and during his stay there ad-corrosive action of the Brazilian waters dressed an assembly of the teachers of the Inland Empire, who were attending the teachers' institute in Pullman. Relative to the problems just mentioned, he

"Thirty years ago New York was sending butter and cheese to the London markets. New York butter and cheese were ruling out similar products from Ontario, and other parts of the world. Just thirty years ago Denmark began to think she could make butter and put it in the London market. The question was, How could she overcome the lead that New York already had in the London markets? She sent men to London to study out the ground; to find what London wanted. Then she set about to give them the required product.

Denmark is a country of poor soil, which has been tilled and overworked for a thousand years. Nevertheless, the markets of London \$35,000,000 worth of butter. In 1903 the entire United States exported only \$1,064,000 worth of butter. In addition to the vast quansends out one-fifth as much pork as we do, and just as many horses; and cortainly, we should lead the world in the breeding of horses. In the meantime the Danish nation has taught the hens how to work. Four hundred and fifty thousand dollars worth of eggs were exported by this country in 1875, and in 1903 this export had reached a value of \$8,092,000. In the last ten years Denmark has taken \$8,000,000 worth of corn from Iowa and Nebraska, via New York, which she has fed to Danish cows and pigs, and then placed the latter in the European markets in successful

America. "I said a moment ago that twenty years ago the competitor of Denmark was the State of New York. In these twenty years the Danish people have years farm values in the State of New York have decreased \$200,000,000. In the last fifteen years Ontario has outbid New York in the same way in the cheese market. Twenty years ago New York companies received Canadian are sending their choese over the Canadian boundaries, and paying two cents per pound in order to sell it at all." Showing the superiority of European

"Wurtemburg is a small German state, a little larger than the Inland temburg began to realize that her ulation was beginning to dwindle; that something had to be done to maintain her integrity as a state. So she set about building up a system of schools for all the people; that would help the boy who wished to be a carpenter, a gree, according to his needs, as they would assist the youth who desired to be a lawyer, an engineer, or a physician. Today Wurtemburg has a university giving courses of world-wide fame; technical schools, weaving and manufacturing schools; two hundred and thirty industrial schools in towns and villages: schools for metal workers, and workers in the textile trades; schools of art, of agriculture, of preparation for household management; and numerous farm schools, and high schools through-

out the state. "Wurtemburg, a state but little larger than the Inland Empire of Eastern Washington, supports all these institutions, with an income of ten dollars per head of population. What would American citizens think, if in addition to supporting agricultural colleges, they first hymn, an old lady entered the The father of the lad, who was about were asked to support five hundred technical and industrial schools for her hand, exclaiming: "Keep your every two million of population? This is what is being done in the small state of Wurtemburg, and from the point of view of American citizens today, it is almost inconceivable; the contemplation of which must lead any American citizen to infer that his country has much to do and learn before it can successfully compete with the old country in the products of industrial education."

Answers to Queries.

By J. L. Ashlock, Washington Experiment Sta-

Haverford, Pa.-"Is it considered that hog-raising is practicable in the northwestern part of the United States?" H. W.

"It is probable that there is no place in the United States where the prices for pork products average as high as in the Pacific Northwest. A condition of significance, too, is that the people of this region are not sufficiently alive to the necessity of their meeting the demand for pork products. Those who at the present time we note a growing tendency among farmers to pay more attention to this business. The Berkshire breed is preferable, in my opinion, although the Duroe Jerseys are making some headway. At the experiment station we have about concluded that a cross of these two breeds would be better than either one by itself."

The Gentle Rebuff.

"Immeasurable are the rebuffs that the helpers of the poor, the seekers after charity for their suffering brothers undergo," said a New York charity or ganization official. "A friend of mine. a Methodist minister in a small western town, told me the other day of his last rebuff, a not unkind one. Entering the office of the local weekly, the minister said to the editor:

"'I am soliciting aid for a gentleman of refinement and intelligence who is in dire need of a little ready money, but who is far too proud a man to make his sufferings known."

"'Why,' exclaimed the editor, pushing up his eyeshade, 'I'm the only chap in the village who answers that description. What's this gentleman's name?

"'I regret,' said the minister, 'that I am not at liberty to disclose it.'

"'Why, it must be me, said the edi tor. 'It is me. It's me, sure. Heaven prosper you, parson, in your good

What Makes the Heart Beat? Prof. Jacques Loeb, the celebrated biologist, in his book, "Dynamics of Living Matter," has shown that a strip cut from the ventricle of the heart put in a solution of chloride of sodium will continue to beat for a number of days, until putrefaction sets in. He says this can be done with an ordinary muscle after it has been extirpated from the body. This would tend to prove that the heart is a chemical machine and that it is all due to chemical action. The muscular contraction is probably due to the substitution of sodium for calcium salts in the cells of the mus-

The difficulty of this theory is that it does not explain the control of the muscles. It is plain that the problem of control is not solved by the chemical

Mothers will find Mrs. Winslow's Soothing Syrup the best remedy to use for their children during the teething period.

Discovering Writers.

The rejection of a manuscript often left a pang, but the acceptable manuscript, especially from an unknown hand, brought a glow of joy which richly compensated me for all I suffered from the others. To feel the touch never felt before, to be the first to find the planet unimagined in the illimitable heaven of art, to be in at the dawn of a new talent, with the ight that seems to mantle the written page, who would not be an editor for such a privilege? I do not know how it is with other editors who are also authors, but I can truly say for myself that nothing of my own which I thought fresh and true ever gave me more pleasure than that I got from the methods of education in comparison like qualities in the work of some young writer revealing his power .-W. D. Howells in Atlantic.

The Master's Title.

Prof. Key when head master of a large London school was one of the most genial gentlemen that ever filled that position. He was fond of encouraging fun in his boys and was not unwilling to recount occasionally during class time when anything prompted it the manners and customs of countries he had visited. On one occasion he was telling his class about Spain and said:

"Do you know, boys, that when a man attains to eminence there he is not called 'sir,' but is given the title of 'don?' "

One of the boys here called out: "Then, I suppose, sir, they would

call you Don Key?" The gravity of the class was completely upset for the remainder of the afternoon.-Strand Magazine.

What is Pe-ru-na?

Is it a Catarrh Remedy, or a Tonic, or is it Both?

Some people call Peruna a great tonic. Others refer to Peruna as a great catarrh remedy.

Which of these people are right? Is it more proper to call Peruna a catarrh remedy than to call it a tonic?

Our reply is, that Peruna is both a tonic and a catarrh remedy. Indeed, there can be no effectual catarrh remedy that is not also a tonic. In order to thoroughly relieve any case of catarrh, a remedy must not only

have a specific action on the mucous membranes affected by the catarrh, but it must have a general tonic action on the nervous system. Catarrh, even in persons who are otherwise strong, is a weakened condi-

tion of some mucous membrane. There must be something to strengthen the

circulation, to give tone to the arteries, and to raise the vital forces. Perhaps no vegetable remedy in the world has attracted so much attention from medical writers as HYDRASTIS CANADENSIS. The wonderful efficacy of this herb has been recognized many years, and is growing in its hold upon the medical profession. When joined with CUBEBS and COPAIBA a trio of medical agents is formed in Peruna which constitutes a specific remedy for catarrh that in the present state of medical progress cannot be improved upon. This action, reinforced by such renowned tonics as COLLIN-SONIA CANADENSIS, CORYDALIS FORMOSA and CEDRON SEED, ought

to make this compound an ideal remedy for catarrh in all its stages and locations

From a theoretical standpoint, therefore, Peruna is beyond criticism. The use of Peruna, confirms this opinion. Numberless testimonials from every quarter of the earth furnish ample evidence that this judgment is not over enthusiastic. When practical experience confirms a well-grounded theory the result is a truth that cannot be shaken.

Manufactured by Peruna Drug Manufacturing Co., Columbus, Chio

Mrs. Vick-Senn-What do you suppose you would do if you were to meet the

fool killer? Her Husband-I'd tell him I was the man he was looking for, all right. I have just given orders to have that new addition to the house torn down and built again exactly as you want it.

Taking No Chances. "Oh, the sorrow of it!" sobbed the

fair maid. "Last night I refused Mr. Blank and this morning his body was found in the river."

"Poor fellow!" murmured her giri friend. "I suppose he was afraid you might change your mind."

Calling His Attention. Mr. Lingerlong-I had a queer adven-

ture this afternoon-Miss de Muir (with a swift glance at the clock)-You mean yesterday afternoen, I presume.

Blushing Bride-'Sh! You mustn't let my husband hear you ask that question. Don't you know he's a beekeeper?

Shop Talk Barred,

ular spot; if this were true simple cleanliness and local applications would heal them. Whenever a sore or ulcer refuses to heal readily, the blood is at fault; this vital fluid is filled with impurities and poisons which are being constantly discharged into the place, feeding it with noxious matter and irritating and inflaming the nerves and tissues so the sore cannot heal. These impurities in the blood may be the remains of some constitutional trouble, the effect of a debilitating spell of sickness, leaving disease germs in the system, or the absorption by the blood of the fermented refuse matter which the bodily channels of waste have failed to remove. Again the cause may be hereditary, the diseased blood of ancestry being handed down to posterity; but whatever the cause, the fact that the sore will not heal shows the necessity for the very best constitutional treatment. There is nothing that causes more worry and anxiety than an old sore which resists treatment.

Every symptom suggests pollution and disease-the discharge, the red, angry looking flesh, the pain and inflammation, and the discoloration of surrounding parts, all show that deep down in the blood there are morbid and dangerous forces at work, constantly creating poisons which may in the end lead to Cancer. Local applications are valuable only for their cleansing and antiseptic effects; they do not reach the blood, where the real cause is located, and can therefore have no real curative worth. S. S. S. heals old sores by going down to the fountain-head of the trouble and driving out the poison-producing germs and morbid matters which are

I want to recommend S. S. S. to any who are in need of a blood purifier, and especially as a remedy for sores and obstinate ulcers. In 1877 I had my leg badly cut on the sharp edge of a barrel, and having on a blue woolen stocking the place was badly poisoned from the dye. A great sore formed and for years no one knows what I suffered with the place. I tried, it seemed to me, everything I had ever heard of, but I got no relief and I thought I would have to go through life with an angry, discharging sore on my leg. At last I began the use of S. S. S., and it was but a short time until I saw that the place was improving. I continued it until it removed all the poison from my blood and made a complete and permanent cure of JNO. ELLIS. 250 Navy Street, Brooklyn, N. Y.

keeping the ulcer open. It removes every particle of impurity from the circulation and makes this life-stream pure, fresh and health-sustaining. Then as new, rich blood is carried to the place the healing begins, all discharge ceases, the inflammation leaves, new tissue and healthy flesh are formed, and soon the sore or ulcer is well. S. S. S. is the greatest of all blood purifiers and finest of tonics, just what is needed in the treatment, and in addition to curing the sore will build up and strengthen every part of the system. Special book on Sores and Ulcers and any medical advice desired furnished free to all who write. THE SWIFT SPECIFIC CO., ATLANTA, GA.
