Cheap and Simple Ice House,

An leehouse is one of the simplest of farm buildings; in fact, many farmers make a mistake in putting up too seator La Follette was discussing elaborate a building, which falls to endure and to afford sufficient ventilation perions toward the abolition of for keeping the ice. The simple building shown in the drawing, which is reproduced from Farm and Home, was mes," said Senator La Pollette. put up with about one day's labor. The framework was made of refuse hard wood, some 2x4's and some 2x6's.

SECTIONAL VIEW OF ICEHOUSE.

Second-rate pine boards were used for siding, which was nailed on the juside of the frame. The roofing was made of similar material as the sides, but of a little better quality.

Benedict Arnold died in London June In filling, a space is left between the 1901. His life after his treason was wall and the ice, to be packed with most anhappy one. He was avoided sawdust. The crevices between the mes of honor and on many ocea, cakes are filled with fine ice shavings. an deliberately insulted. He re but no sawdust is used between or on ned a considerable sum of money fop of the layers of ice until the filling me the British government and made in done, when about one foot of saw-

His second son, born in be kept firm and solid while the ice 30 entered the British army in 1798, is being removed in summer. It is sed with credit in many parts of important to locate the icehouse world and three years before his where there will be good drainage. Both is 1854 was made a Heutenant Poor drainage at the bottom of the ice or allowing air to circulate at the top will quickly spoil the contents of the house.

Light for the Barn.

Light is one of the great sanitary conditions which promote vigorous health. If the germs of tuberculosis are exposed to the sun a short time end of the season remove from the their vitality is destroyed, but their staller all stocks left on hand, thus infecting power can be preserved for ng the possibility of unfit seeds | several months if kept in a dark recepregarding primarily the interests of . The State veterinarians who inspect

purchaser, D. M. Ferry & Co. have dairy accommodations now recommend plenty of light, and the new dairy barns are featured with an increased number of windows. If possible the windows of a dairy barn should be so placed as to cause the sun at some portion of the day to shine on all parts of the floor, as the rays will search for disease microbes and destroy them. Sunlight acts as a powerful disinfectant, and nothing is cheaper nor more effective in preventing disease than sunlight.

Dark, underground stables are now condemned as insanitary and disease breeding. Dark stables are often also damp, and present especially favorable conditions for the evolution and propagation of tuberculosis. Cattle on the plains, which live only under the shelter of the firmament, are immune to tuberculosis and many other diseases, and barns for housing live stock should be constructed with plenty of windows to promote the sanitary condition of their occupants.-Goodall's Farmer.

Automatic Cheese Press.

This form of cheese press maintains a constant pressure for any desired length of time by means of a rope

wrapped around a pulley at the end and over a small pulley on a beam overhead. The 140-pound weight is sufficient to keep the screw pressed up to the cheese. A close cheese is obtained, free from any mechanical openings.

Better Results with Corn.

According to the estimate made by the government a few weeks ago, the average per acre of corn produced in Texas this year is only about five bushels below that of lows, one of the greatest of the corn-producing States. In the amount produced it was estimated that Texas would be fifth in the States of the Union. This is a splendid showing compared with what it but enough to grace a boarding house was only a few years ago, and is ac- table. counted for by the fact that the Texas farmer is beginning to realize the great | ing trough. The hens need the iron as advantage there is in raising his own a tonic. But do not let anything else ment and bread, and in the further fact | besides clean water go in with the that the Texas Corn Growers' Associa- nails. tion has done come splendid work in not only pointing out the blessings to white paper and packed in new boxes the farmer in growing corn, but also

Horse Value of Country.

Almost \$2,000,000,000 worth of horses are owned in the United States, according to the Year Book of the Department of Agriculture. It is probable that if the horses were taken at their real value, instead of their assessed value, this figure would be greatly increased. According to this report. there are 19,992,000 horses in this country, with a value of \$1,867,530,000, and the average value per head is \$93.40. Anybody knows that has tried to buy horses of late that the average per head is too small, for even an ordinary work horse is worth more than that However, the showing is very encouraging. In the last ten or twelve years the number of horses in this country has almost doubled, and, instead of there being too many horses, there are not enough to do all the business that is required, and if it were not for the use of automobile trucks in the large cities the merchants of this country would be hard pressed for methods of transportation for their goods. With 1672-A monthly post was established business increasing, as every sign indicates, there will be a greater demand than ever for horses during the coming year. In view of this, breeders can go on increasing their business, with every confidence that all the horses they can produce will find a rendy sale at a good figure. As for good trotters, horses capable of going out and winning in their class, the demand is greatly in excess of the supply. Auction sale managers complain that there are not enough of the good ones to supply the gentlemen who are in the market for likely prospects. The coming year will be a banner one in the horse business, especially in the breeding business.

Making Use of the Dog.

This sketch shows an arrangement for making use of the dog for carrying water. It simply consists of a wheel, a, 8 ft. in diameter and 18 in. wide. with room enough inside for the dog to walk around, where he acts as a trend DOG POWER FOR PUMPING WATER.

power, which causes the pump, e, to revolve. In southern California there are

Twin Lambs.

An experienced breeder says that in the case of twins it is well to prace them with the mother in a small, separate pen for a day or two, in order that they may become acquainted, and to avoid the danger of one of the lambs straying away, which may cause tron-

ble. When lambs are born weakly more care is required, and unless the shepherd is with them to see that they are suckled soon after birth they are liable to become chilled and die. If the lamb is too weak to stand up and suck, it should be held up and some milk milked into its mouth, when it will soon take the tent and help itself. or the ewe may be gently laid upon her side and the lamb brought to the teat 1900-Mgr. Montagnini, secretary of the on its knees or side, and held, as above

When Buying "Porkers."

If you hear that your neighbor's hogs see them. Keep away from them and do not let anybody from the infected lot come near your own hogs. If you buy pigs from a point distant from your own neighborhood, keep them by themselves for at least two weeks, as during that time the disease will show if they have it.

Sorghum for the Silo.

Under Florida conditions sorghum makes the best and cheapest crop for the silo. Analysis shows sorghum silage to be a little richer in total digestible nutrients than corn silage. It makes a heavier field of green forage per acre than corn. The station favors sorghum for slinge.
