DIET CURES CONSUMPTION.

Get Fat, Build Up, and the Dreaded Disease will Disappear.

No less a medical authority than Dr. Osler says: "The cure of tuberculosis is a question of nutrition; make a patient grow fat and the local disease may be left to take care of itself." Many others who have occupied the highest position in the medical profession have said the same; but none have pointed out a successful way of accomplishing it.

The most certain method ever adopted for the cure of the "Great White Plague" is through the diet used as per directions given below which can be taken at home and comes within reach of the poor as well as the rich.

The modus operandi is to force the body to take on fat, a desideratum long felt by the medical profession but never before attained to.

During the last fifteen years I have prescribed this diet in hundreds of instances and where directions have been weight and increased the strength and vitality of the patient rapidly up to a dominating force in the body and the germs causing consumption have been overcome and the cure accomplished. Some have gained a pound a day and would not increase in weight more.

The all important thing is to drink large quantities of milk strippings (the cream when a proper cow is selected.)

This seems so simple and easy that it law. many have refused to follow directions and demand medicines to cure them, but there has not yet been discovered any medicine that is a specific for consumption.

To get best results a healthy cow should be selected, one that does not quiring residence. cough and one that gives very rich milk. A Jersey cow is preferable. The milk should always be tested, to be sure that there is a large percentage of cream in it.

The last quart should be milked into a separate dish which rests in a larger vessel containing warm water just sufficient to prevent the strippings from cooling below blood heat. The cow should be thoroughly cleaned to 'clock transit company officials prevent any dirt getting into the milk, so the patient can blow back the froth and drink at once without straining, as this cools it too much.

Begin by drinking nearly a pint in the morning and the same at night, and increase the quantity gradually so that in 10 or 15 days a full quart will be taken twice a day. It should be taken immediately after milking, before it has had time to cool any.
