HARD FIGHT AHEAD.

Vigorous Measures Needed to Save Country's Bean Crops From Disease.

We are beginning to see signs of anthracnose appearing in this country, and the disease will have to be fought hammer and tongs to keep it within control, says Field and Farm of Denver. The cut shows the appearance of the fungus. When the disease reaches this stage bordeaux mixture has been effective in downing it in the west. We have the advantage of a dry climate not only in growing beans, but in fighting the diseases which attack the

BEANS AFFECTED WITH ANTHRACNOSE. [From Field and Farm, Denver.]

crop. Nearly every one is familiar with the spotted appearance of snap beans and especially of the wax podded varieties.

Practically all parts of the bean plant except the roots are subject to attack. The most common indication of the presence of the disease is the occurrence of brown or black sunken areas on the stems, leaves and pods. They may also appear on the seed leaves and stems of the plant soon after appearing above ground and cause considerable losses through a reduction in the stand.

On the older plants the attack is most serious on the larger veins of the leaves, and the leaf may be wholly destroyed or its efficiency greatly reduced. From the stems and leaves the fungus spreads to the pods.

WINNING WAYS.

The people who win their way into the inmost recesses of the hearts of others are not usually the most brilliant and gifted, but those who have tender sympathy, gentle patience, self forgetfulness and that indefinable faculty of eliciting the better nature of others.
