## FINDS SIGNS OF OIL.

### Tom Root Discovers Traces Near Myrtle Point.

Tom Root, who lives across the river, brought to this office this week a chunk of greenish colored clay that smells as though it had been soaked in a barrel of coal oil for a month, but he declared that it had been freshly dug from the earth and that the place where it was dug smelled so strongly like crude petroleum that it was a showing of force of mind over matter to keep a person's olfactory nerves in the near vicinity. It is possible that the stuff is not saturated with oil, but it smells enough like it to be so, and its general character would seem to warrant a thorough scientific test. If it is oil, it is but another evidence that coal, oil and gas underlie this vicinage in a manner that will warrant thorough investigation.—Myrtle Point Enterprise.
