One Man Can't Know Everything

This is true in the complex art of electrical production and application.

One kind of expert knowledge is demanded of the dynamo manufacturer; another kind is required of the man who keeps the machines running. Illumination has developed a science of its own. Electric power, in its larger uses calls for years of study and training.

When we advertise that we have experts competent to investigate power needs of any size and variety, and to give authoritative advice, we mean just what we say.

The Byllesby organization includes engineers capable of grappling with the biggest kinds of electrical installations. There are men for all phases and angles of the electrical industry.

The entire staff is at the call of every operating company. Although the man wanted in a particular emergency may be a thousand miles away, his services are to be obtained as soon as the railroads can bring him.

The whole Byllesby organization is at the service of every customer.

Our electrical engineering staff is at the disposal of the power user large or small. If permission is given, the right men will be sent to solve his power problems.

ODD COAST WEATHER.

A peculiarity of the coast weather that accounts somewhat for the adequate climate was evidenced here the first of the week. It was a time when there were heavy frosts at night. Along about the noon hour the frost remained on the shady places, while in the sun it was hot enough to make thoughts of parasols, fans, linen dusters and ice cream agreeable. When the frost in the shade and the hot sun shine mixed in proper proportions, the result was an agreeable temperature.—Myrtle Point Enterprise.

CURRY COUNTY CENSUS.

The Gold Beach Globe says: "The Floras Lake Re-hasher gives the population of Curry as 9,315. There were 500 votes cast at the last November election and in order to have that population, each voter would have five wives, 285 of them

and 315 of them 14 children apiece, or an average family of 19 for every vote cast. Superintendent Guerin's annual census of school children gives the number of children between the ages of 4 and 20 years as 647. To this number add 500 and you have a total of 1,147. Figuring that each voter has a wife, you would have a grand total of 1,647, and if the Re-hasher is right in its census there would have to be 8,368 children under the age of four years, or 12 children in every family less than four years old."
