> Plan for Vessel-Engineer Leefe in charge of the government work on Coos Bay has taken up with the Portland engineering office a plan for putting some additional spar buoys in the lower Bay. The request was made by Capt. Olson of the Nann Smith, who is to pilot the Bessie Dollar in and out of here in March. The big vessel with a cargo of 3,500,000 feet of lumber will draw about 21 feet of water and Capt. Olson does not anticipate any difficulty except where the channel is rather tortuous near the old government works.

MUNICIPAL DANCES FIRST AIDS TO CUPID

CINCINNATI, Ohio, Feb. 15-The proposed municipal dance halls will also be matrimonial bureaus if conducted on the lines set forth by Mayor Hunt,

"I want the supervision so strict that any girl may feel secure in at-tending them," said the Mayor. "The average girl who works has too little chance to meet available men. She should be able to pick a husband from the men she will meet at the municipal dance halls."

CUT WORMS IN ORCHARDS.

Much damage to young orchards is done by climbing cut worms. These insects eat the buds and young foliage only during the night time. During the day they hide at the base of the tree, going down a few inches

into the soil. The Washington State Experi-mental Station recommends as the best treatment for this pest to scatter a poisoned bait a spoonful to a tree. This is made by mixing dry 1 pound of Paris green to 20 pounds of bran, then adding one or two quarts of molasses and if possible the same amount of old beer. Work up with enough water to make a stiff mash before placing over the orchprior to October 1, 1910, will be paid ard. Do not let chickens have access

to this poisoned bran. As a supplement to this treatment spray the trees with Bordeaux made as follows: 5 pounds of blue stone dissolved in 25 gallons of water and 5 pounds of lime slacked in 25 gai-

lons of water. Mix the two.

The same scheme of treatment will answer for the garden cut worms. If the poisoned bait be distributed before you set your plants or sow your seed you can work out the cut worms from the garden. After the plants have come up the Bordeaux spray will help to protect them.

Tying bands of cotton around the tree trunks or painting with tanglefoot or axle grease; or fastening collars of tin or paper around the trunks are remedies that will not answer for our climbing cut worms.

There are several other insects which feed on buds, foliage and garden produce which may not be killed by this treatment.
