AID IN VICE CRUSADE
Detectives Assisted by Women in Hammond Crusade
(CHICAGO, Sept. 9)—Detectives aided by Miss Virginia Brooks, the reformer, Mrs. John F. Bass, suffrage leader and settlement worker, searched today for more women witnessed in the investigation of vice conditions in West Hammond, Ill., where several men are said to have been killed by "doped" drinks served in road houses. Coroner Hoffman said today that important revelations probably would come tomorrow.
WILSON COMING WEST
Governor May Increase Number of Addresses he is to Deliver
(NEW YORK, Sept. 9)—Owing to the demands from western points for speeches from Gov. Wilson, the Governor discussed plans of a western trip with Senator Gore and others and he may decide to increase the number of speeches he was to deliver.
MY UNCLE
When I was broke and full of groans, and rustling round for trifling loans, who was it lent me two iron bones? My uncle. Who is my refuge and my hope when I in deep affliction grope, fooled badly by the baseball dope? My uncle. Who keeps my overcoat a spell when things are not progressing well, and fills it with a mothball smell? My uncle. Who takes my watch and plate glass ring when to his lair the same I bring, enabling me to smile and sing? My uncle. Who helps me from an ugly hole and doesn't jar my shrinking soul with any moral rigmorale? My uncle. Who has a helping hand for me when I am steeped in misery, and other friends and helpers flee? My uncle. When days are bleak and roads are rough, and all the world seems grim and tough, who is it always has the stuff? My uncle. Who is it stakes me with a plunk for almost any kind of junk—a pair of shoes, a hat, a trunk, My uncle. No other relative have I who hears me when distressed I cry; one only heeds my plaintive sigh—my uncle. And when I leave this earthly crowd I'll ask my uncle, from a cloud, to lend me something on my shroud. Oh, uncle!

The Harbors of the Pacific Coast
Terminal Facilities of the Panama Canal Trade
(Coos Bay is the second Oregon harbor in size, and it presents no special natural difficulties to overcome. Vessels drawing 22 feet of water may now cross the bar at high tide, enabling the port of Marshfield to handle, last year, 300,000 tons of freight and 25,000 passengers between it, San Francisco and Portland. The harbor is 180 miles south of the mouth of the Columbia River and it is the principal ocean port of Oregon, being located in the center of or adjacent to the vastest forest region and the most fertile valleys.
The Coos Jetty has a history far more inviting than that of any other on the Pacific Coast. When its construction was commenced in 1879, there were only 10 feet of water on the bar. The first project called for 1,760 feet of jetty, which was speedily built at a cost of only \$213,750. As the channel still continued movable, tortuous and unstable, congress in 1890 ordered the north jetty continued to a length of 9,600 feet and the construction of a south jetty 4,200 feet long. The extension of the north jetty was completed in twelve years at a cost of only \$721,720, of which \$196,721 was for maintenance. The channel deepened naturally and became stable, so that it was not necessary to construct the south jetty. Deducting maintenance, it will be seen that the actual cost of this jetty was only \$77 per foot. After a lapse of ten years, the condition of the jetty is practically normal. Its enrockment has only slightly subsided. Its receiving wharf and tramway only have been destroyed, the result of the work of the teredo and consequent decay.
ABOUT THE HOUSE
Moths will not come near clothes sprinkled with turpentine.
If milk is heated until lukewarm and then quickly chilled, there will be much more cream.
Curtains are easily run on brass rods if a thimble is first placed on the end of the rod.
All traces of mud may be readily removed from black clothing by rubbing the spots with a piece of raw potato.
A raw potato cut in half and rubbed on fingers stained with vegetable paring will remove the discoloration.
Now is the time to lay in your supply of coal for next winter, as it can be bought much cheaper now than later on.
If a sugary crust is desired on meringue, sift powdered sugar over it before it is placed in the oven, and have the latter cool.
A taut wire stretched along the pantry wall is a good holder for all tin lids. Slip them back of it and the knobs will hold them in place.
Severe pains in the stomach after eating will be almost instantly relieved by drinking a teaspoonful of salt in a glass of cold water.
Use borax in cleaning house. It does not ruin paint, whitens the curtains and does not stain the carpets which are washed with it.
If painting in the inside of a house, place buckets of water around as it absorbs the poisonous fumes from the paint, which has arsenic in it, especially green paint.
To remove ink spots from paper, wash the spot with a camel's hair brush dipped in a solution of oxalic acid; when the ink has disappeared wash with clean water.
Horse radish is much improved for table use by mixing it with sweet turnip, or rutabaga, one part of the latter to two parts of the former, and it keeps in cans just as well.
The woman who learns to sew straw neatly can always have a stylish hat. She can buy a few cents, rip them raid, and sew it in any of the correct shapes.
For cleaning jewelry there is nothing better than ammonia and water. If dull or dirty, rub a little soap on a soft brush and brush them in this wash. Rinse in cold water and polish with chamolis.
Cover plaster statuary over with cold starch and set them in the window, but not in the sun, until dry, then brush off the starch with a dry, soft cloth. Do not use soap on them.
In buying plaster figures, it is best to select those of ivory finish, as they keep clean much longer and are more easily cleaned.
Excellent coat and shirtwaist hangers can be made by cutting the hoops from small barrels—those called half barrels—in two. Wind folds of cambric or fancy material on these and fasten a strong loop in the middle from which to suspend. An advantage these have over many of the bought ones is that there is no angle to crease the garment.
HOW MRS. WASHINGTON MADE BRANDIED PEARS
Martha's Own Recipe for Preserving Fruit Found Among Old Papers.
PHILADELPHIA, Sept. 9.—Martha Washington's own recipe for preserving pears has been brought to light among some unpublished colonial papers in the possession of Mrs. Arvilla McDonough. The recipe is as follows:
"The pears should be very fresh. Wash and put them into boiling lye for a minute; remove, and put them into cold water. Next put the fruit into a prepared syrup of sugar and water. Use a half pound of sugar for every pound of fruit; water to dissolve. Now cook for a quarter of an hour. Remove and put on plates to cool. Boil syrup down to one-half its original quantity; put syrup and pears into jars and add brandy."
Rev. Frost says that the new styles of dresses show that women are just a matter of form.

CITY WATER PLANT SUCCESS
At Cost of \$25,000 Ample Supply Is Secured at Woodburn, Ore.
WOODBURN, Or., Sept. 9.—This city has just expended \$25,000 on a municipal water system, and as a result is serving double the amount of customers that the old water company did. Following the sale of bonds last winter, the city purchased the local water system from R. K. Page, of Salem, for \$9650, and immediately provided for improvements and extensions. Over 15,000 feet of new mains were laid, the greater part six and eight inches in diameter, which are supplied with water from a steel tank of 60,000 gallons capacity. The tank is supported by a structural steel tower at an elevation of 110 feet above its base, which supplies good pressure at the most distant points of the system. Twenty-five fire hydrants have been installed at different points of the city for fire protection.
The water supply is obtained from two six inch wells, which tap a vein at a depth of 130 feet below the surface and this is forced into the mains and supply tank by two deep well pumps, at the rate of 150 gallons a minute. The water from these wells is excellent and has never been known to fail in supply. The pumps are operated by electric gasoline engine in reserve for emergency. It is estimated that the revenue from the plant will pay all interest and retire the bonds within 20 years, the life of the securities.
BURNED UP A FORTUNE
Farmer Mourns Straw Stack When Expert Points Out Value.
SALEM, Ore., Sept. 9.—"I've burned up a fortune," wailed the Oregon farmer, as he stood reading the chart on the value of the straw stack, in the exhibit of the Oregon Agricultural College at the state fair.
The chart showed wheat straw to contain, to the tone, the following valuable fertilizing constituents: 9.6 lbs. nitrogen, 4.4 phosphoric acid, and 12.6 potash, valued at \$2.29. A ton of oat straw contains 9.2 lbs. nitrogen, 5.6 of phosphoric acid, 35.4 potash, valued at \$3.43; clover straw, 29.4 lbs. nitrogen, 8.4 phosphoric acid, 25.2 potash, valued at \$6.09; sawdust, 4 lbs. nitrogen, 5 phosphoric acid, 14 potash, value \$1.60; peat, 20 lbs. nitrogen, value \$3.90.
This was but one of the enlightening exhibits in the O. A. C. booth. Charts showing the amount and value of manure produced by the different farm animals, and the fertilizing constituents in a year's manure from 50 cows—astonishing figures—were shown. The testing of seeds for purity and strength was shown, and a placard offered free tests to all who would send a sample (a tablespoonful of such small seed as grasses and alfalfa and six of larger seed, as grains) to the college seed testing laboratories.
The dairy exhibit showed the production of butter and cheese to the 100 lbs. of milk from the different breeds, the Holstein giving 5.9 lbs. of cheese and 3.75 of butter; Ayrshire, 10 lbs. cheese and 4.3 butter; Guernsey, 13.5 cheese and 6 butter; Jersey, 14.3 cheese and 6.5 butter. The manner of making tests of the moisture content of butter was also exhibited.
PLANS FOR CHINA
Former President Outlines Scheme for Advancing Nation.
(LONDON, Sept. 9.—In a speech at Pekin in which he dwelt upon the recognition of the Chinese republic by the powers, the Daily Mail's Pekin correspondent says Dr. Sun Yat Sen, former president of China, advocated an open door policy, the encouragement of railway building, the granting of mining and other industrial concessions, and the giving of such protection to foreigners as would be calculated to remove diplomatic difficulties and bring China strength and prosperity.
MILLIONS FOR NEW AUTOS.
Two Thousand Registered Each Month in California.
SACRAMENTO, Cal., Sept. 10.—California, according to estimates compiled in the office of the secretary of state spend on an average \$3,000,000 a month for new automobiles and almost \$50,000 a month for second hand automobiles. More than 2000 automobiles are registered every month in the office of the secretary of state.
Operation of Landing Monster Takes Two Hours.
AVALON, Catalina Island, Sept. 10.—For the fourth time this year the record swordfish catch was broken here when F. H. Reed of Oklahoma City, Okla., brought in one of the kings of the deep weighing 252 pounds. It took Reid two hours to bring the fish near enough to be gaffed.
