

# The "Kant-Klog" Sprayer

For Trees, Vines, Vegetables, Disinfecting, Whitewashing.

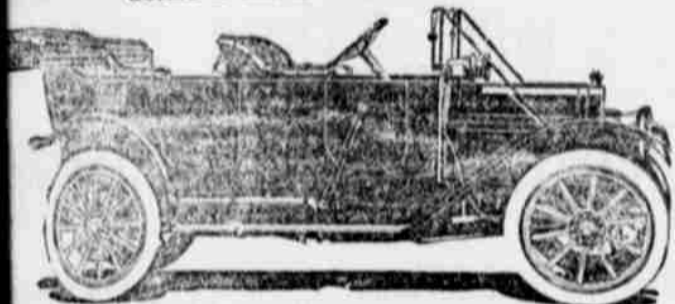

The manufacturers of the "Kant-Klog" are the owners of the Compressed Air Sprayer business, and although many imitators have appeared, it still leads them all. The nozzle and spring hose-ends are special features which alone put the "Kant-Klog" in a class by itself. Made either in polished Iron or Brass.

Also bear in mind that we are headquarters for lime and sulphur spraying solution.

**MONUMENTAL WORKS**

South Broadway and make selection from the large stock now on hand. Mr. Wilson has in his employ the only practical marble and granite cutter in Coos County. And none but the best work is turned out.

### The Times Does Job Printing

## The Woman's Corner

Edited Under the Auspices of the Women's Christian Temperance Union of Marshfield.

At a recent public temperance meeting one of the speakers said: "Some professing Christians, who attend church, uphold and countenance saloons. Such men are trying to go to Heaven on one leg, while the other is traveling to hell." A most original and appropriate remark—and brings the thought that such a Christian would not get very high, with such a course, for as fast as one leg took him a step upward, the other would pull him down again, and as there is no such thing as standing in one place in the Christian life, and as it is easier to travel downward than upward, from the philosophy of cause and effect, the momentum of each step would naturally take him still lower. It is easy to conjecture where the final stopping place will be. "Ye cannot serve God and mammon."

One leg, without a strong staff to lean upon, will never climb the golden heights of Paradise. This strong staff is Jesus Christ, which is safe and sure; but the cost of this staff is true repentance and forsaking of your sins.

Vice and Intemperance are the germs that ultimately cause the decay of nations.

The Union Signal, official organ of the National Woman's Christian Temperance Union, has subscribers in nearly 40 different nations in all parts of the world. Among these are India, Burma, Australasia, Malaysia, Cape Good Hope, Natal, Russia, China, Japan, Transvaal and many others.

The temperance workers, principally the W. C. T. U., are planning a campaign for the coming year to secure 1,000,000 new signers to the temperance pledge.

### LIBRARY NOTES.

Here is a list of the magazines which are contributed to the Marshfield library and their donors:

Royal Auction Bridge Club—Scribner's.

John Goss—Scientific American, Artistic Needle Workers—Ladies' Home Journal and Modern Priscilla.

Mrs. E. O'Connell—Popular Mechanics.

Longshoremen's Union—Seamen's Journal, American Federationist and Portland Labor Press.

Mrs. Henry Sengstacken—Survey, Progress Club—Independent, Rev. Hall—Pacific Baptist.

The Marshfield public library is trying to get contributions for subscriptions to its magazines, as it has no fund with which to cover that expense. Above are the magazines already subscribed for and following are those to which subscriptions are wanted. As the library obtains its magazines from an agency and gets a reduction on each subscription, those subscribing may have returned to them any money saved on their individual subscriptions, or the balance may go towards payment of some other magazine.

A list of the magazines unsubscribed for is:

American Review of Reviews, Atlantic Monthly, Century, Everybody's, Harper's Monthly, McClure's, National Geographic Magazine, Reader's Guide, St. Nicholas, Scientific American Supplement, Travel, World's Work, Youth's Companion.

In view of the fact that Marshfield is going to try to obtain a Carnegie library, a survey of what has been done in Medford might not be out of place. Medford has a population of 8840, according to the last census. The following account is taken from the report of the Oregon Library commission for 1912:

"The city accepted Mr. Carnegie's offer of \$20,000 for a library building, which is now completed. A trained librarian has been engaged and the library is making great progress. The following notes on the library were furnished by Mrs. Porter J. Neff, who has been an active worker in it since it was founded:

"The Medford public library was organized in 1907 by Mrs. Ida A. Kidder, who came here from the commission. It was started with 200 volumes from a subscription library and 175 donated. \$604 was raised through the efforts of the Greater Medford club by securing subscriptions from business men, benevolent orders and club members.

"In March, 1908, the city council adopted a resolution establishing a public library. A library board was appointed by the mayor, consisting of eight members besides himself. Money for the support of the library was raised by entertainments of various sorts given under the auspices of the library board and the Greater Medford club, until 1911, when the city levied a tax of one-fifth of a mill. This netted \$1250.

"In order to assure the board of the support of the city in securing

**AN EPIDEMIC OF COUGHING.**

is sweeping over the town and young and old are alike affected. Foley's Honey & Tar Compound is a quick safe reliable family medicine for coughs and colds. A. S. Jones, of Lee Pharmacy, Chico, Calif., says: "Foley's Honey and Tar Compound has no equal, and I recommend it as containing no narcotics or other harmful properties." For sale by Lockhart & Parsons, The Busy Corner.

**FILES CURED AT HOME BY NEW ABSORPTION METHOD.**

If you suffer from bleeding, itching, blind or protruding files, send me your address and I will tell you how to cure yourself at home by the new absorption treatment and will also send some of this home treatment free for trial, with references from your own locality if requested. Immediate relief and permanent cure assured. Send no money, but tell others of this offer. Write today to Mrs. M. Summers, Box P, Notre Dame, Ind.

a Carnegie appropriation the council passed a resolution pledging \$2000 per year (ten per cent of the amount to be asked for) for the support of the library.

"January 18, 1911, a letter was received from Mr. Carnegie's secretary saying that the sum of \$20,000 would be granted the city of Medford for a library building providing the usual requirements were met with. The city gave a site in the park formerly occupied by the water tower.

"The library is a one-story building with basement, built of cream pressed brick, size 44x95 feet. The finish, and the furniture which is the regular library style, is of oak; indirect lighting is used both in the library and the basement lecture room. There is steam heat, cork carpets cover the floors and there is an attractive fire place in the children's room. There is space for 20,000 volumes. The building and furniture cost \$725 more than the appropriation, which sum was taken from the library fund, thus cutting down the book money for this year. The appropriation this year (1912) was five-tenths of a mill, amounting to about \$3000.

"The library is centrally located, well lighted, and with sufficient funds can be made very attractive. As it is, the patronage is increasing rapidly."

**FLORENCE MILL TO OPEN SOON.**

FLORENCE, March 1.—Lees & Son, the millwrights who have had charge of repairing and overhauling the Porter Brothers' mill here, finished their work. With a few more preliminaries completed, the mill will start. The superintendent is already on hand. The Speedwell, Fifield and several smaller crafts will carry the lumber to San Francisco.

**ROGUE FISHING BILL.**

Pete Grant One of the Hardest Workers for Opening Up Rogue River.

SALEM, Ore., March 1.—With the prospect of final agreement on the bill opening Rogue River to commercial fishing, the services of one of the strongest lobbies ever seen at an Oregon legislature will come to an end.

One of the prominent figures in the lobby has been Pete Grant, of Portland, but he has not been obtrusive, and few have known the whereabouts of his coming and remaining. But it has leaked out that in the event the river is opened Grant is to be the real fisherman. He is to be in charge of operations, it is said, when the canneries on the Rogue once more resume.

The bill is in conference now, the houses having disagreed over the amendments made in the senate through the efforts of Smith of Josephine, extending the season for commercial fishing in his county.

**WHY WE HAVE EGGS AT EASTER.**

Washington Gladden, writing about the history of Easter in the Woman's Home Companion, shows how eggs have been connected with Easter from the earliest days. Dr. Gladden's explanation of the origin of the custom of using eggs on Easter follows:

"Probably the fact that the egg holds, shut up in itself, the elements of future life—a life which may long be dormant and then come forth in vigor and beauty, into consciousness and activity—made it a proper symbol of the Resurrection. But of all the millions who have decorated eggs at the Easter season or played with them as a pretty toy, or fed upon them as a delicacy, very few have ever stopped to reflect upon the profound meaning of the emblem. In my own boyhood a breakfast of eggs was one of the unwritten regulations of Easter Sunday; the main question with the boys was the number per capita that could be consumed. Among us there was none of that dainty decoration with dyes and pigments which has given so much pleasure in old times and new. This fashion, in the opinion of the writer, arose among the Christians from the joy occasioned by their returning to their favorite food after so long an abstinence from them during Lent." This is not impossible, for the egg was formerly counted as flesh and denied to good Christians during the Lenten season."

**ABRAHAM LINCOLN.**

We cannot pay the honor due To Freedom's captain; tongues are lame When they attempt to link due praise Unto the martyred Lincoln's name. We half impotent, palsied, dumb, Our swelling hearts alone can sense The weakness of our spoken words, The emptiness of eloquence.

He stood with calm, unflinching faith When reeled the edifice of state, When chaos threatened and the skies Were blackened by the clouds of hate, And, ruled by love of God and man, With naught of malice in his heart, He stayed the ruthless hands that sought To rend the Nation's soul apart.

Supremely great, we of this time His value cannot estimate, 'Tis only by the distant view That we can judge the truly great, And not till in eternity Are balanced the accounts of earth Will mankind know and comprehend The measure of our Lincoln's worth.

—Arthur J. Burdick.

**CLOCK STROKES.**

By Dr. Frank Crane

Philipp James Bailey's line was: "We should count time by heart throbs."

Clocks, watches, hour glasses, sun dials and New Year's days are artificial. Since the clock struck last, or since last year, we may have lived only a minute, or a thousand years. Life sometimes crawls like a snail; sometimes it whizzes like a bullet.

In life's little day there are six hours. There are six crises to be passed, six big facts to which we must adjust ourselves, six sphinx questions full of fate put to us, whose answers mean success or failure. They are as follows:

Sex, religion, education, work, philosophy, old age.

The sex instinct is one of the strongest in the human make-up. Usually the stronger and more forceful the man or woman, the more lively is the sex feeling. It is perhaps the most important matter for a human being to settle.

It cannot be settled by default, by ignorance, by running away. You must learn the physical facts and laws about yourself. Then you must face the question squarely, make up your mind, establish your policy, and stick to it.

The religious question presents itself generally to people in their teens. It is inseparably connected with adolescence. It means, in substance, your relation to the unknown elements of life, to destiny, to the infinite, and to death. It may mean little in your outward life, but it is a vital issue to your inward happiness or misery.

The question of education is a serious one—not so much your technical trade or calling, but your general grounding in "book-learning," that is, in the accumulated knowledge of the past.

There is hardly a conceivable excuse for a boy or girl not going through the public high school. You can set it down that whoever fails to do this has deducted 50 per cent from life's efficiency. Better swindle a man out of a hundred thousand dollars than cheat a boy or girl out of his or her schooling.

The choice of one's life-work is a decision that means much. Here the only safe rule is to follow one's natural, inborn inclinations.

Every human being by and by settles down into a certain attitude toward the universe. We call this his philosophy of life. This is different from religion though it merges into it. Your philosophy of life determines how you are going to take failure, success, friends and enemies; whether you will be a pessimist or an optimist, an opportunist or a man of principle.

These first five turning points in life are in childhood. It is the youth under 21 who has most to do with the master issues of the man's or woman's career.

The last problem to be solved is old age. How can one best adjust oneself to this, the last of life's inevitables? Is it to be sour, crabbed and querulous, or sweet and serene?

These six problems are placed before every human being who lives out the normally allotted time.

These are the real clock strokes of human life. These are the real milestones of success.

**HOLDS SCHOOL IN SHACK.**

Since the destruction of the Coal-Edo school house by fire, studies are pursued in a shack a half mile away. The furniture is the most primitive imaginable, and the school is without apparatus of any kind. Yet the teacher is doing good work under the circumstances. The school will close in four weeks, and before another term opens it will be provided with better accommodations and adequate equipment.—Coquille Sentinel.

**FACTS FROM EVERYWHERE.**

Trade in human hair is a big industry abroad, exports sometimes reaching a total of \$3,000,000 to \$4,000,000 a year. Italian merchants lead in the trade.

The distinguishing feature of a new French aeroplane is a control that will enable the machine to be driven at reduced as well as full speed.

A new German electrical device to enable a moving train to set a signal makes use of a slight sinking of a rail as a train passes over it.

A single turn of a corkscrewlike implement that a Pennsylvanian has patented cuts out the core of a grapefruit and loosens the pulp from the skin.

To prevent an automobile speeding and yet allow the full power to be used when needed, a governor driven from a hub like a speed indicator, has been invented.

Doctors in Middletown, O., the other day grafted three square feet of pig skin on the breast and shoulders of Clyde Rich, a young man who had been seriously burned.

An egg tester employing an electric lamp that a Texan has patented is so arranged that the light is switched on only when an egg is in position, thereby saving current.

Stones are found in Nevada which when placed apart begin to travel toward a common center. The presence of lodestone or magnetic iron ore is the explanation of the phenomenon.

Not to be outdone by the new coins of the United States, the Bulgarian government has coined a variety of pieces, 25, 10 and 5 stotinks. One hundred stotinks equal 19.3 cents.

**BAND DANCE at EAGLES HALL next SATURDAY night**

## Along the Waterfront.

### COLUMBINE BEING REPAIRED

**Captain Byrnes Recruiting Health in Ireland; Said to Be Better.**

ASTORIA, March 1.—Capt. W. E. Gregory, who is now in command of the lighthouse tender Columbine, arrived Monday to visit his family for a few days. The Columbine, which is stationed in Alaskan waters with headquarters at Ketchikan, is now at Seattle to undergo a general overhauling and the bids on the work are not to be opened until next Saturday.

Capt. Gregory says he received a letter a short time ago from Captain P. J. Byrnes, of the Columbine, who is now at his former home in Ireland, in which the latter said his health is improving rapidly. Captain Byrnes, who has been on sick leave since last July, was recently granted an extension of leave which will expire next June, when it is expected that he will be able to return to duty.

**Mirene is Repaired.**

A Portland paper says: "Carrying a capacity cargo, the gasoline schooner Mirene, Captain Hay, left last night for Waldport and Newport last night on the first trip she has made in more than a month. On her last passage from Portland she went to Nehalem, going ashore and having a narrow escape from being badly disabled. When floated she was brought to the Supple shipyards where she spent more than two weeks undergoing repairs. From now on it is announced that the craft will be kept in regular service between Portland and Alsea Bay points, leaving each end of the line every week."

**VARIETIES.**

Colorado's 1912 radium output was valued at \$2,500,000.

Chicago has 40 descendants of John and Priscilla Alden.

Some Kansas farmers are now conducting private fish hatcheries profitably.

Forest fires in 1912 caused losses in Pennsylvania aggregated over \$50,000.

Commerce of Hawaii in 1912 was \$15,000,000 greater than in 1911.

Over 51,000 locomotives are daily operated in the United States.

Chicago packing houses must shortly expend \$1,000,000 for safety devices.

Los Angeles has 26 parks containing a total of 3,986 acres of land.

The island of Laysan, Hawaiian group, is to be made a bird reserve.

In 1912 the total fire loss in the United States and Canada reached \$225,320,000.

In 1912 some 1,066,345 persons landed in New York from steamships.

Cleveland, Ohio, will next summer start a city sightseeing automobile service.

Siberia is expected to be an important source of the world's food at no distant day.

Sweden exported 35,000,000 pounds of matches in the six months ending with last June.

A Boston scientist, Prof. A. J. Honej, claims to have discovered a cure for leprosy.

Kentucky and Pennsylvania produce nearly all the canal coal mined in the United States.

New York will have one of the world's greatest skylights in its new postoffice as it will contain 90 tons of glass.

The United States in 1912 exported manufactures valued at more than \$1,100,000,000.

The centenary of the birth of David Livingston will be celebrated in March by the geographers of the world.

Jeremiah Bancroft, 88, of Douglas, Mass., is the last chief of the vanishing Ponkapog Indians.

A North Dakota inventor's doughraising utensil gets its heat from an ordinary kerosene lamp.

Australia is irrigating more than 2,000,000 acres of grazing lands with artesian wells.

A floating drydock which can lift battleships weighing 22,500 tons recently was completed for the American navy.

Algot Lange of New York has started on a three-year exploring trip along the upper waters of the Amazon river.

Fitzgerald, Georgia, plans to erect a \$15,000 monument in honor of the civil war soldiers of both the North and South.

A Minnesota inventor's hairbrush carries a comb on the back permitting the use of both with one hand.

There are 25,195 reporting banks in the United States having assets aggregating \$25,000,000,000 and liabilities to depositors of over \$17,000,000,000.

New Zealand's short working hours have not injured Auckland's growth, the population of which city has doubled since 1899.

Four more national bird reservations were established by the United States government last year, making the total number 50.

Paper from which gas mantles can be made, instead of using the more expensive fabrics, has been invented by an Italian scientist.

Experiments in France indicate that mushroom poisoning can be cured by a serum prepared in a similar manner to diphtheria antitoxin.

The alcoholic consumption of a head in this country is a little less than 23 gallons a year, of which 21 are contained in beer.

The old-fashioned feather duster and the vacuum cleaner have been combined by a Pennsylvania inventor for removing dust from small articles.

Incandescent lamps in which the filaments are in the form of an inverted cone, have been found to give one-fifth more light than those of the same in which filaments form cylinders.
